Message from the Chairman &
Chief Executive Officer

About Antamina.
From Áncash to the World

Operations and Business Development.
Operational Excellence

Sustainability.
The path to development

Chapter 01

Message
from the
Chairman &
CHIEF EXECUTIVE OFFICER

Yanacancha,

September 2024

To the Antamina community, to the population within our operational influence area, to our strategic partners, and to our workers:

We are pleased to present our 2023 Sustainability Report, which reflects our commitment to sustainability and our approach to integrating responsible practices into every aspect of our mining operations. As we move toward a more sustainable future, we remain firmly committed to generating economic value while promoting respect for the environment and the well-being of local communities and our employees.

This report aims to showcase the performance of Compañía Minera Antamina S.A. throughout 2023. However, it's important first to contextualize this within the political, economic, and industry-specific environments. Mining is a key activity for Peru's development as it energizes and decentralizes economic growth and tax collection, generates foreign exchange that ensures currency and monetary stability, and creates formal employment with social protection that reduces families' economic vulnerability.

This sector, currently accounting for approximately 10% of the GDP, had a fiscal collection of S/ 16,089 million in 2023, equivalent to about 11% of the total collected. In terms of foreign trade, mining and metallurgical exports totaled US\$ 39,639 million in 2023, accounting for 61% of total exports.

As an indicator of recovery, Peru's mining industry registered a notable increase in employment generation, according to data from the Ministry of Energy and Mines (MINEM). By the end of 2023, the sector employed an average of 225,674 workers, representing the second highest level of employment in the history of mining in Peru.

Nationally, 2023 saw S/ 5,254 million generated with respect to mining canon transfers, and S/ 2,130 million in mining royalties. Specifically, the Áncash region, where our operations are based, received a total of S/ 1,784 million in respect of canon and royalties during this period.

In total, in 2023, Áncash was the third region with the highest budget allocation in Peru, amounting to S/ 6,200 million. At the end of the year, the region reported approximately S/ 3,700 million in public investment project executions, about 60% of the total.

For these positive indices to be maintained and for mining to continue as a development driver, it is crucial that the territories where the mining industry operates have robust public and private institutions that facilitate building a sustainable future. This goal is shared by the business sector, the state, and communities at large. Thus, our purpose is to continue actively participating in improving living conditions and access to basic services for the people of Áncash.

Our social management strategy is founded on five fundamental pillars, and focuses on:

- i) promoting mature institutional development through our technical assistance and capacity-building projects for local and regional authorities, with the Municipality of San Marcos standing out, achieving in its first year of governance a public work execution amount exceeding S/ 250 million, the second highest among district municipalities nationwide;
- ii) creating opportunities and spaces for future generations through projects like Fogel, *Efecto Áncash*, *Más Educación*, and *Beca Más Progreso*, reaching over 30,000 students collectively;
- iii) contributing to closing social and productive infrastructure gaps through impactful projects like the construction of hospitals in Huarmey, Huari, and Llata, a High-Performance School in Cátac, and the water and sanitation project in Huarmey;
- iv) promoting local entrepreneurship and economic development, as in the case of avocado producers in Valle Fortaleza and their strategic alliance with Talsa Agroexport, or collaborating with private companies and public institutions to reopen Anta Airport, scheduled for mid-2024; and
- v) investing in emergency and disaster prevention efforts, as seen in the response to damages caused by Cyclone Yaku and the dengue outbreak.

This strategy, designed for the long term, incorporates sustainability, providing tools to both the local economic sector and political leaders guiding regional development.

Our commitment to improving the quality of life in our areas of influence drives us to contribute to the execution of infrastructure projects, mainly through the Works for Taxes (OXI) modality. By the end of 2023, a total of 67 agreements were registered, amounting to S/ 1,890 million, in projects oriented towards health (6), sanitation (13), irrigation systems (19), road infrastructure (11), education (15), and others (3).

At a national level

**S/ 5,254
million**

*in mining canon transfers to the
regions*

**S/ 2,130
million**

in mining royalties

The generation and implementation of projects are crucial, but so is the support and technical assistance our company provides to authorities at every stage of the process. From planning to execution, operation, and maintenance, our support helps close gaps and enhance the management capabilities of public officials and the institutions they lead. We also promote and strengthen the necessary components to build a strong and sustainable local business fabric. As a result, Antamina is positioned as a key development partner for Áncash.

Another central aspect of our actions is environmental protection and adherence to the water and air quality standards set by the Peruvian Government. These are regularly monitored in collaboration with local communities and relevant institutions. Thanks to this continuous effort, we have accomplished that 100% of the water used in our operations is sourced from surface collections of rainwater, thereby not impacting the population's access to this essential resource.

Recognizing that environmental sustainability is crucial for the mining industry, we use the carbon footprint as the main indicator to assess our performance in strategically counteracting climate change.

It is worth noting that in 2023, we approached the final stage of managing a Modification of the Environmental Impact Study (MEIA). We solidly addressed 723 observations from the evaluating authority (SENACE) and technical reviewers (ANA, MIDAGRI, SERNANP, SERFOR, MINCUL). State approval will enable us to extend the mine life until 2036 on the current footprint, with an investment of approximately US\$ 2,000 million, maintaining operational excellence and ensuring responsible and sustainable socio-environmental management.

However, none of this would be possible without the constant effort of Antamina's core asset—our employees. We prioritize a work culture where the essential values are the health and safety of each of our workers. Our innovative approach to safety standards resulted in a Recordable Accident Frequency Rate (TRIFR) of 0.69 and a Recordable Accident Severity Rate (TRISR) of 11.1 in 2023. Notably, during this period, more than 65,000 trips were made and over 20 million kilometers were traveled as part of our production process, with no traffic accidents recorded.

Workplace safety, as well as our policies on inclusion and equal opportunities, is an essential value integrated into each of our daily tasks. By the end of 2023, 42% of our workforce hailed from Áncash and 12% were women, including in senior management positions. We are proud and committed to progressively increasing female presence in our company.

Everything that has been outlined reflects various aspects of Antamina's performance. We thank all our employees, strategic partners, and communities in our area of influence for their continued support and collaboration. Together, we are building a more sustainable and resilient future for all, always with a focus on safety, respect for communities, and environmental protection. I invite you to read the following chapters of our Sustainability Report, where we will detail these and other achievements.

Víctor Gobitz Colchado

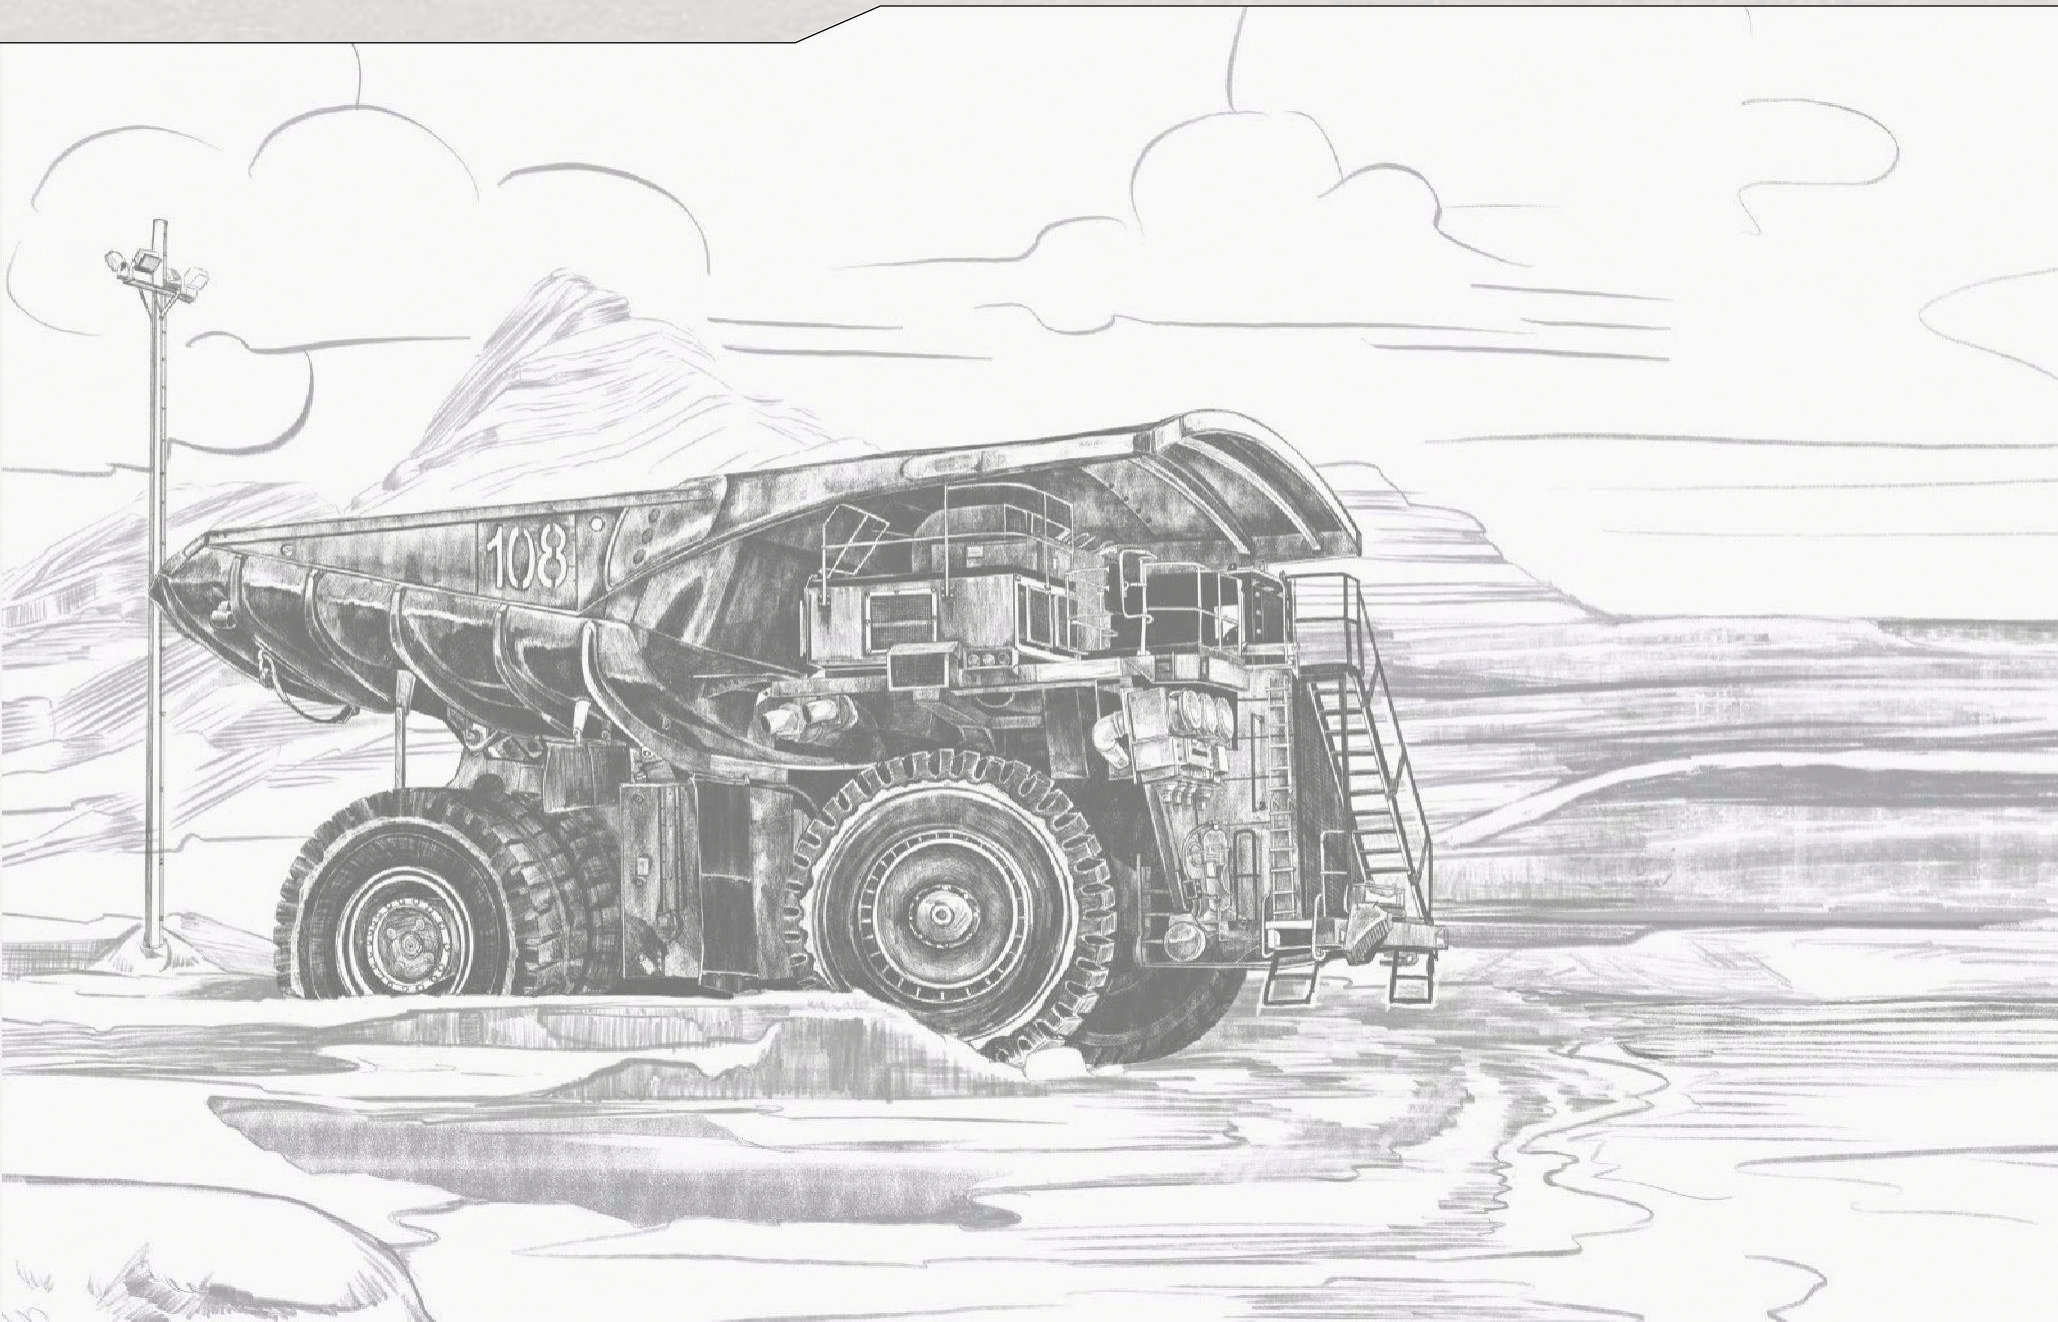

Chairman & CEO

Compañía Minera Antamina S.A.

Chapter 02

About Antamina
From Áncash to the World

2.1 About Antamina

Our operations are centered at the Yanacancha Complex, located 4,300 meters above sea level in the San Marcos district, within the Huari province in the Áncash region, about 200 kilometers from its capital, Huaraz.

Using cutting-edge technology and maintaining the highest environmental and safety standards, we mine non-ferrous metalliferous minerals such as copper, zinc, molybdenum, silver, and lead.

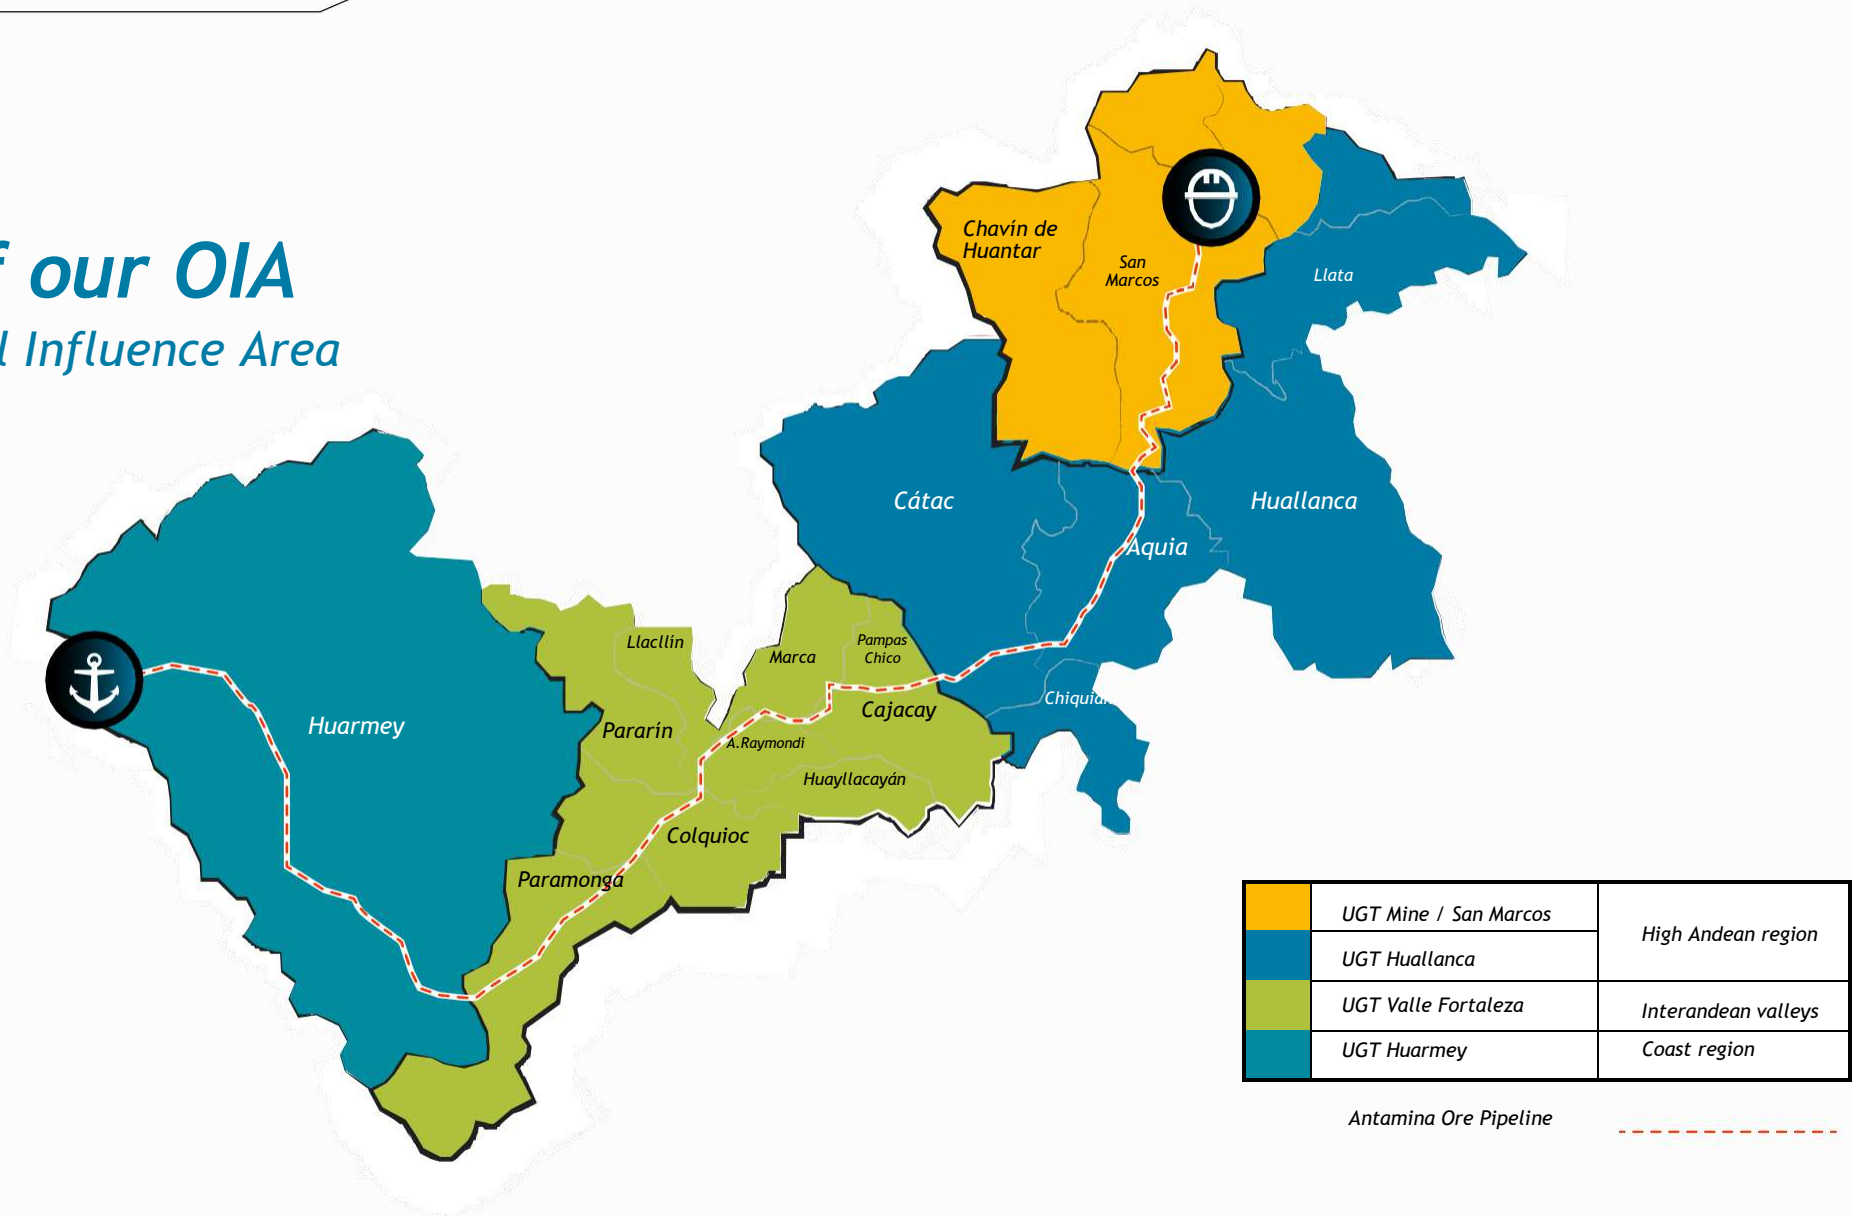

The concentrates produced are shipped from Punta Lobitos port in the coastal province of Huarmey, and then dispatched to various global destinations.

We take pride in our Áncash roots, and our activities in these areas reflect our commitment to sustainable development and our contribution to the local economy.

2.1.1. Map of our OIA

Operational Influence Area

2.1.2 *Our Shareholders*

At present, Antamina ranks among Peru's largest producers of copper and zinc concentrates and is one of the top ten mines globally by production volume.

The company emerged from a strategic partnership between four industry-leading companies in global mining.

Our board is composed of 9 sitting directors, each representing our shareholders.

22.5%**Teck****10%** **mitsubishi**

2.1.3

Our Employees

As of the end of 2023, we employed roughly 13,000 individuals, encompassing Antamina's staff, directly hired operators, and personnel from our contracting firms.

We have reached 12.06% female representation in our workforce.

We have become the first mining company in Peru to achieve gender equity in high-level management roles, with women leading 4 of the 8 vice presidencies.

By the end of 2023, 42% of our workforce originated from Áncash.

2.2 *Our Values*

As a leading company in the Peruvian mining sector, our aim is to enhance the well-being of our employees, shareholders, strategic partners, and the communities within our area of influence, and to actively support Peru's sustainable growth.

Below, we outline the strategic framework governing the company's overall management.

**We are building a
shared future of
progress for Peru,
the Ancash region,
and Antamina.**

2.2.1. *Our Vision, Mission, and Values*

- To be a Peruvian model of mining excellence globally, with extraordinary leaders who turn challenges into successes.
- To generate economic, social, and environmental development through our operations.
- To plan and deliver outstanding outcomes in health and safety, environmental stewardship, community relations, quality, and efficiency, driven by our commitment, enthusiastic engagement, and the leadership of our team.

Our Values

Integrity

We keep our word, honor our commitments, and respect both the law and our corporate policies.

Responsibility

We take responsibility for our actions and their outcomes, and for efficiently managing resources. We operate with social and environmental responsibility, advocating for sustainable development.

Occupational Health and Safety

We prioritize health and safety in all our actions and decisions, proactively protecting both our people and property.

Respect and Recognition

We acknowledge the achievements of our employees and foster a culture that values ideas and contributions.

Continuous Learning

We encourage a culture of continuous learning and improvement among our team, strategic partners, clients, and the broader industry, enhancing processes and technological utilization.

Optimal Performance and Innovation

We cultivate an environment conducive to innovative ideas and methods that enhance our processes sustainably.

2.2.2. *Strategic Objectives*

- Generate value to benefit all members of the Antamina team (employees, shareholders, suppliers, and communities).
- Meet social demands for a circular economy.
- Contribute to the sustainable development of Peru.

2.3 Commitment to Ethics and Integrity

In 2023, we remained dedicated to cultivating a culture of ethics and integrity. To this end, we persistently promoted and strengthened our Corporate Compliance Program both internally and externally.

The Corporate Compliance Program is founded on a suite of policies, procedures, and controls designed to prevent criminal activity. It aims to cultivate an ethical culture and safeguard the reputations of both our employees and our organization.

The Program is structured around a risk analysis and includes key components such as:

- *Compliance-related policies and procedures*
- *Training for employees and contractors*
- *Awareness activities*
- *Due diligence processes*
- *A complaint mechanism known as the Ethics Hotline*

2.3.1

Ethical Culture and Integrity

Our program undergoes an annual review to ensure it remains current and aligned with the contextual risks our organization faces. During this year's review, we successfully passed the ISO 37001 certification audit ("Anti-Bribery Management System"), verifying that all our Compliance processes and controls are effectively implemented.

Our annual training program includes sessions designed to communicate and reinforce the concepts in our Compliance policies. We use both virtual and face-to-face formats to engage the target audience and ensure they focus on the content.

In 2023, we met 100% of our training goals, with details as follows:

TRAINING MODE	NUMBER OF EMPLOYEES TRAINED
In-person / Teams	153
Virtual (Edu Antamina platform)	795
Virtual, targeted at operators	2131

We employ various internal communication strategies to communicate our policies and foster an ongoing culture of integrity. This includes our Compliance Week, a series of activities, games, and dynamic events across our facilities designed to prompt employees to consider the importance of adhering to the highest ethical and integrity standards.

Continuing in this direction, we introduced our Compliance Ambassadors Program to further reinforce our commitment to Compliance culture. This initiative appoints representatives in each department as points of contact, enhancing understanding of Compliance issues and focusing on identifying opportunities for improvement and strategic planning within each organizational area.

2.3.2 *Fostering Transparency*

In Antamina, we have a communication channel managed by an independent third party, designed to receive reports of potential violations of our Code of Conduct, Anti-Bribery Policy, and/or any of our Corporate Compliance policies.

This channel employs a voice platform, telephone support, voicemail, and/or in-person assistance and allows our employees or any third party to make good faith reports based on reasonable belief. This helps us identify shortcomings in our ethical behavior so that we can improve and respond promptly.

Our primary interest is to ensure that Antamina employees and stakeholders feel confident using this channel without fear of retaliation.

- We received 119 reports during 2023
- This represents a 60% increase in reports compared to the previous year
- Only 13% of the reports received were substantiated
- None of the cases were classified as material

2.4

Sector and Company Statistics

According to the Ministry of Energy and Mines, the investment project portfolio in 2023 reached over US\$ 53 billion.

Copper production increased by 12.7% compared to the previous year. Peru solidified its position as the second-largest copper producer in the world, trailing only Chile.

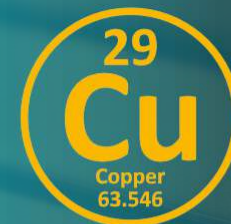

Huincush, operated by Antamina in Áncash, is the main polymetallic production unit, which accounted for 15.8% of the national copper production in 2023.

Gold ranked second in our mining production portfolio, with a year-on-year growth of 2.8% by the end of 2023.

Zinc production recorded a year-on-year increase of 7.2% in 2023. This is primarily due to the contribution from the Huincush polymetallic unit, which concentrated 36% of national output.

Regarding metallic mineral exports, these amounted to US\$ 39,639 million in 2023, representing an 11.3% increase compared to the previous year.

Copper exports in various forms (concentrate, ore, refined, and blister) totaled US\$ 23,005 million, reflecting a 16.8% increase from 2022.

**Peru's copper
production
increased by 12.7%
with regard to 2022**

2.4.1

Active Role of Antamina

As of the end of 2023, Peru's copper production reached 2,755,066 fine metric tons.

Antamina has positioned itself as one of the leading companies in copper production, accounting for 15.8% of the total output.

In terms of zinc, Antamina maintained its leadership position in 2023, contributing 36% to the overall production.

Operationally, we successfully met our metal production targets in 2023. These achievements were the result of a robust financial and operational discipline.

2.4.2 *Mining Investments*

In 2023, Antamina's mining investments totaled US\$ 411 million, a 21% increase compared to the previous year, achieving a 5% CAPEX variance and nearly 100% execution efficiency (0.97).

The increase was primarily due to:

- The commencement of the W1 Ore project
- The start of Phase VIII of the Tailings Storage Facility
- Maintenance of the mills (replacement of stators)
- Upgrades to the Pebbles circuit
- Preparations for the development of the TUSEF waste dump

The investment made in 2023 positioned us as the second-largest investor among mining companies nationwide.

Our cumulative mining investments since the start of operations have reached US\$ 6.2 billion (excluding initial investment), with an average annual growth rate of 18%.

2.5

Antamina together with Peru

<i>Taxes Paid (in million US\$) 2021-2023</i>	2021	2022	2023	
Income Tax	1094.4	850.6	656.4	Accrued: Annual Tax Return (2023) in 04/24
Extraordinary Mining Tax	147.8	140.9	88.4	Cash: 4 quarters paid
Mining Royalties	180.7	169.3	100.4	Cash: 4 quarters paid
Temporary Tax on Net Assets	24.6	30.2	34.4	Cash: declared in the previous year
Supplementary Mining Retirement Fund	7.7	18.1	12.7	Accrued: Annual Tax Return (2023)
Regulatory contribution to Osinergmin	7.8	6.9	5.4	Cash: paid effectively in 2023
Regulatory contribution to OEFA	5.0	5.0	3.2	Cash: paid effectively in 2023

2.6 Multi-Stakeholder Model

2.7 *Antamina's Role in Áncash*

Áncash, where our operations are based, has experienced a sustained process of economic and social progress.

In Antamina, we take pride in contributing solid and sustainable solutions and initiatives that benefit the communities that have welcomed us, and we work together with local authorities to support the territorial development of this region.

2.7.1 *Antamina in the Territory*

The Operational Influence Area (OIA) is a concept developed by the company that goes beyond the Direct Influence Area (DIA) and its legal obligations.

The OIA includes all communities connected to our area of operations, including those located along the ore pipeline route.

It consists of 20 districts across 6 provinces, encompassing high Andean areas, inter-Andean valleys, and the coast.

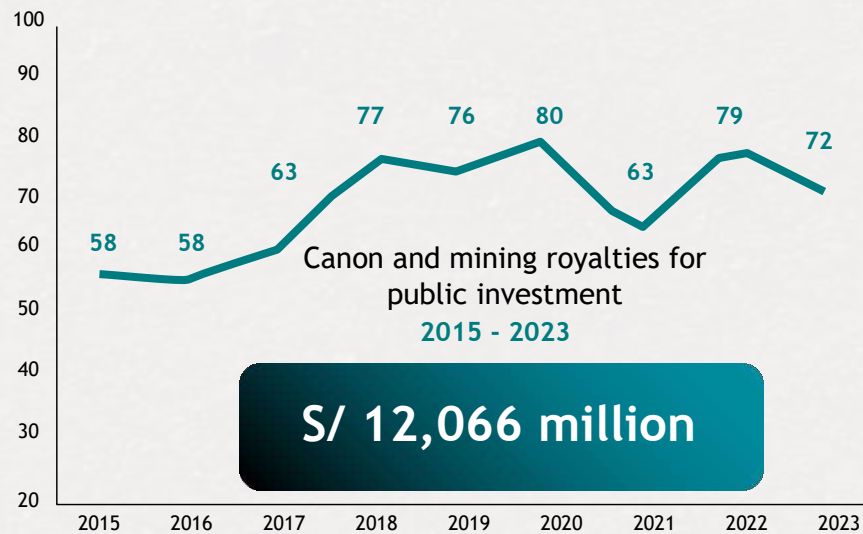

In these areas, the company has established Territorial Management Units (UGT) as an operational tool to strengthen our presence in local communities and our connection with the social environment.

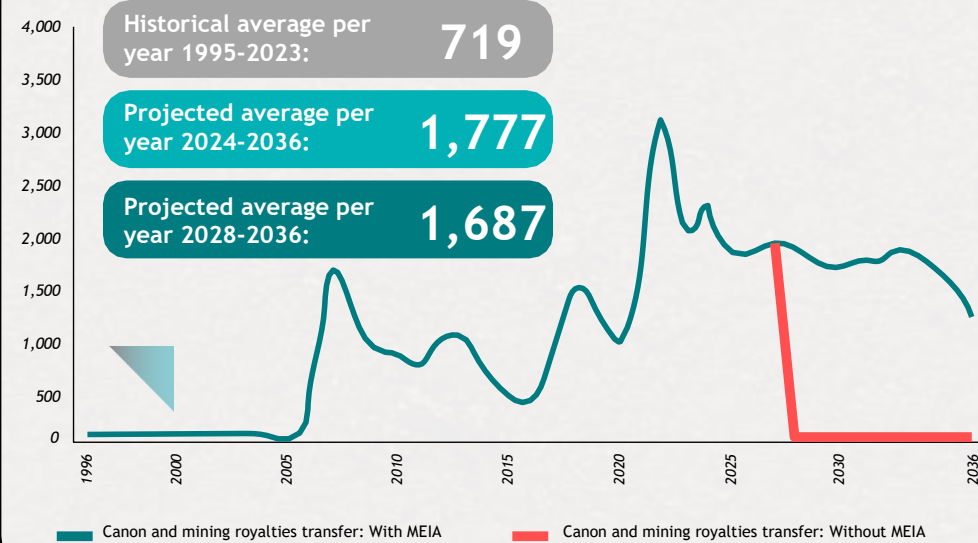

2.7.2 Decentralization Drive for Ancash

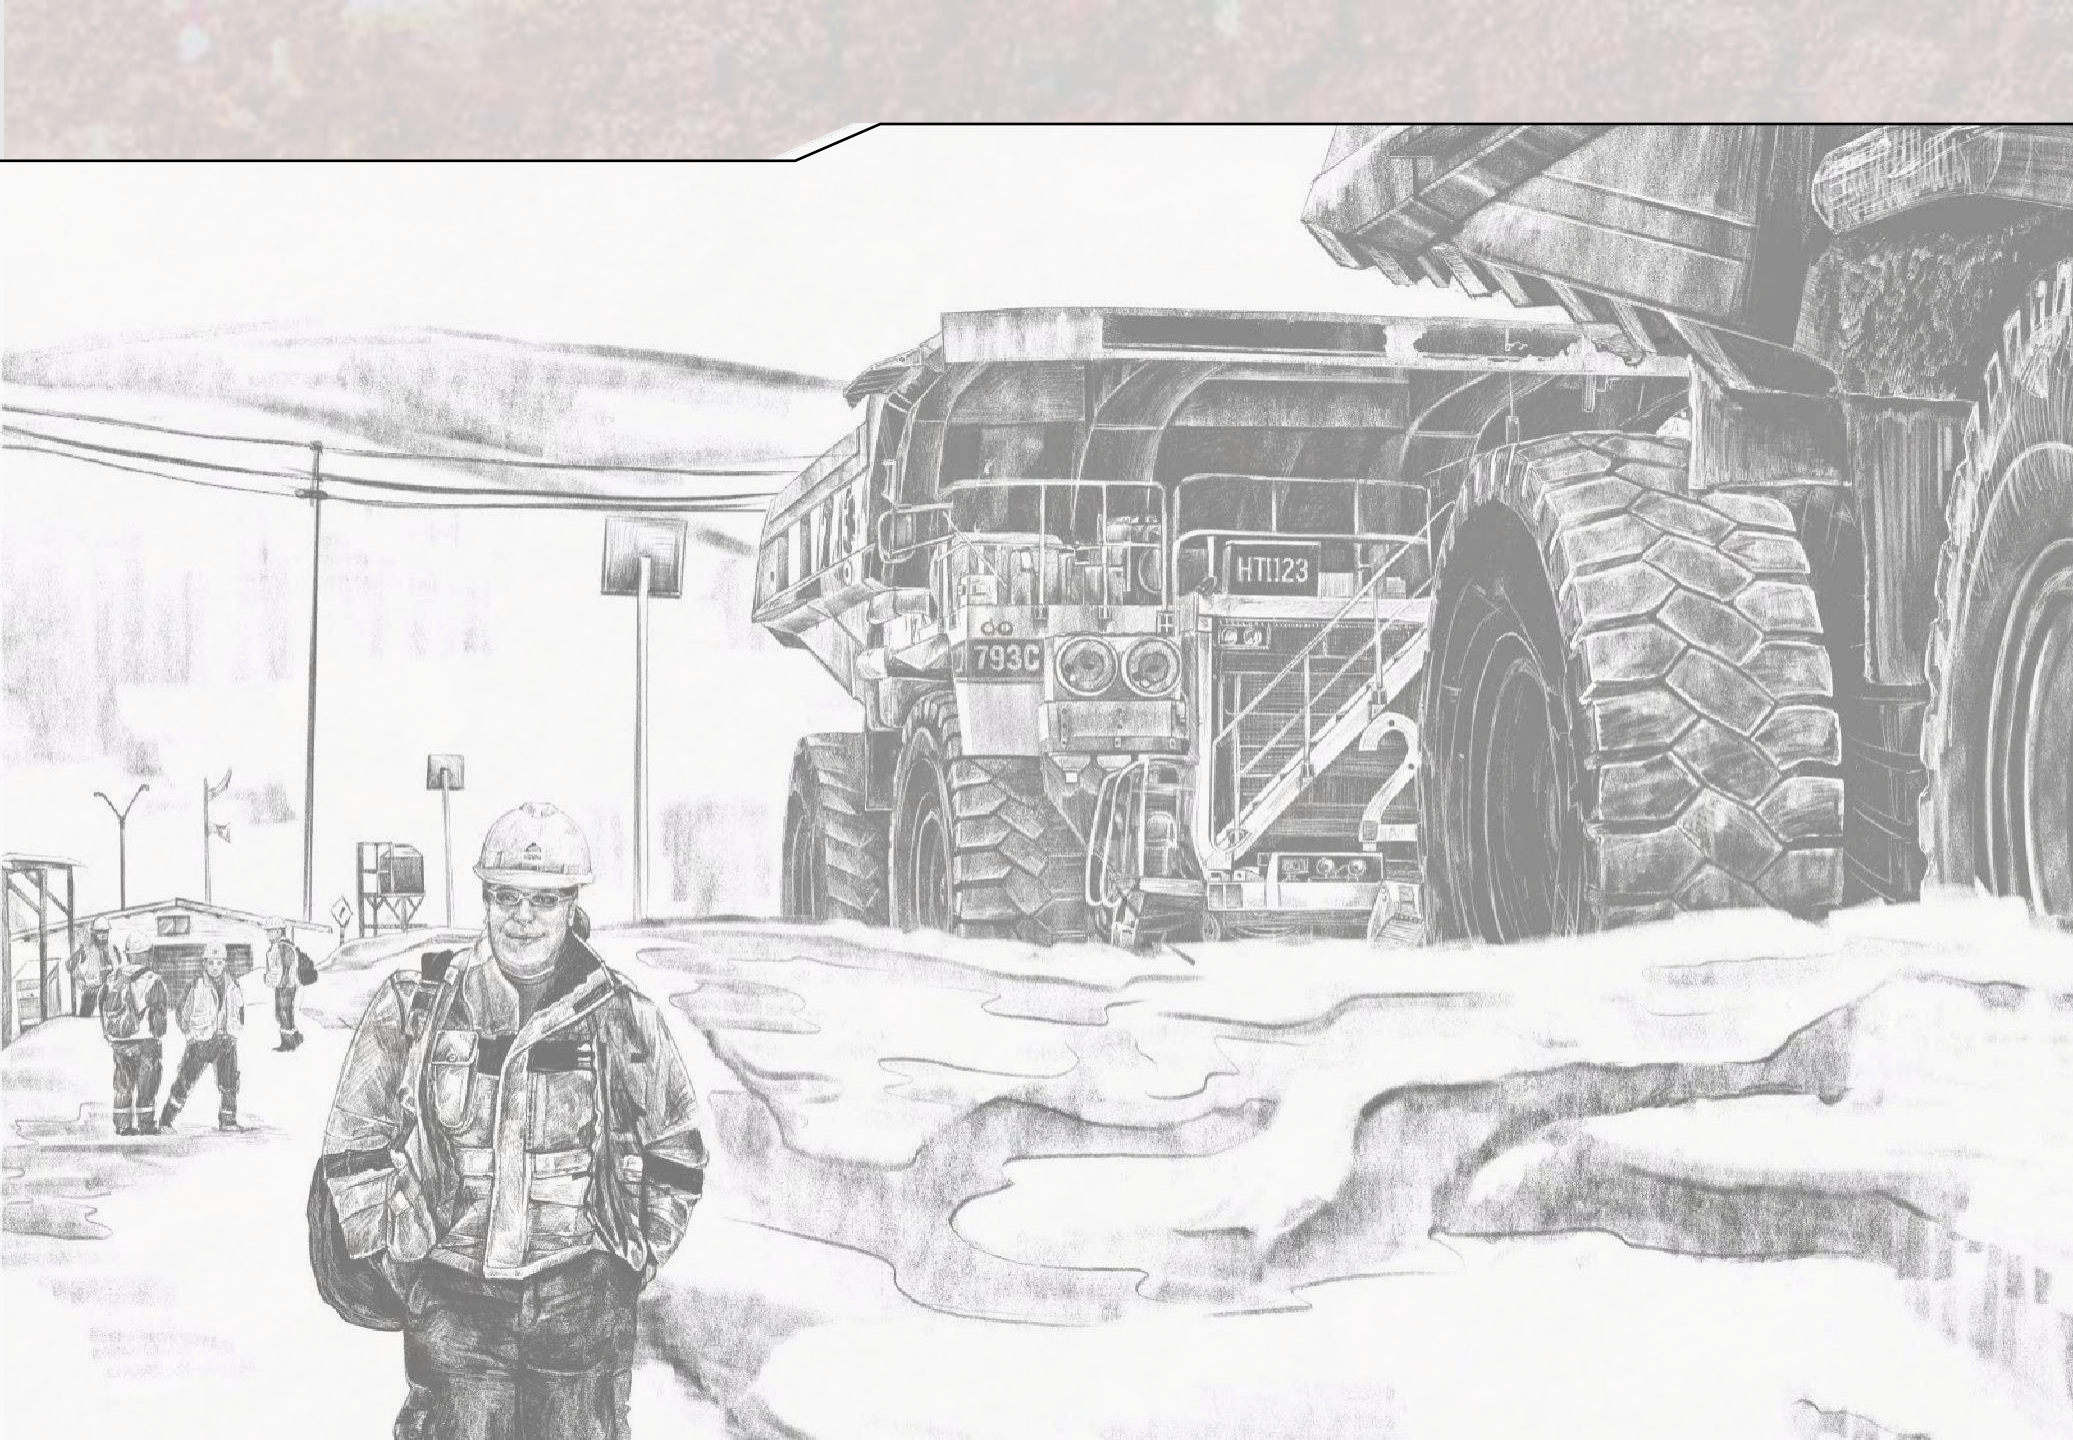

Canon and mining royalties for public investment 2015 - 2023	12,066
Historical average per year 1995 - 2023	719
Projected average per year 2024 - 2036	1,777
Average per year 2028 - 2036	1,687

Public investment financed through canon and mining royalties

Chapter 03

Operations
and Business
Development
Operational Excellence

3.1 Production process

Our products

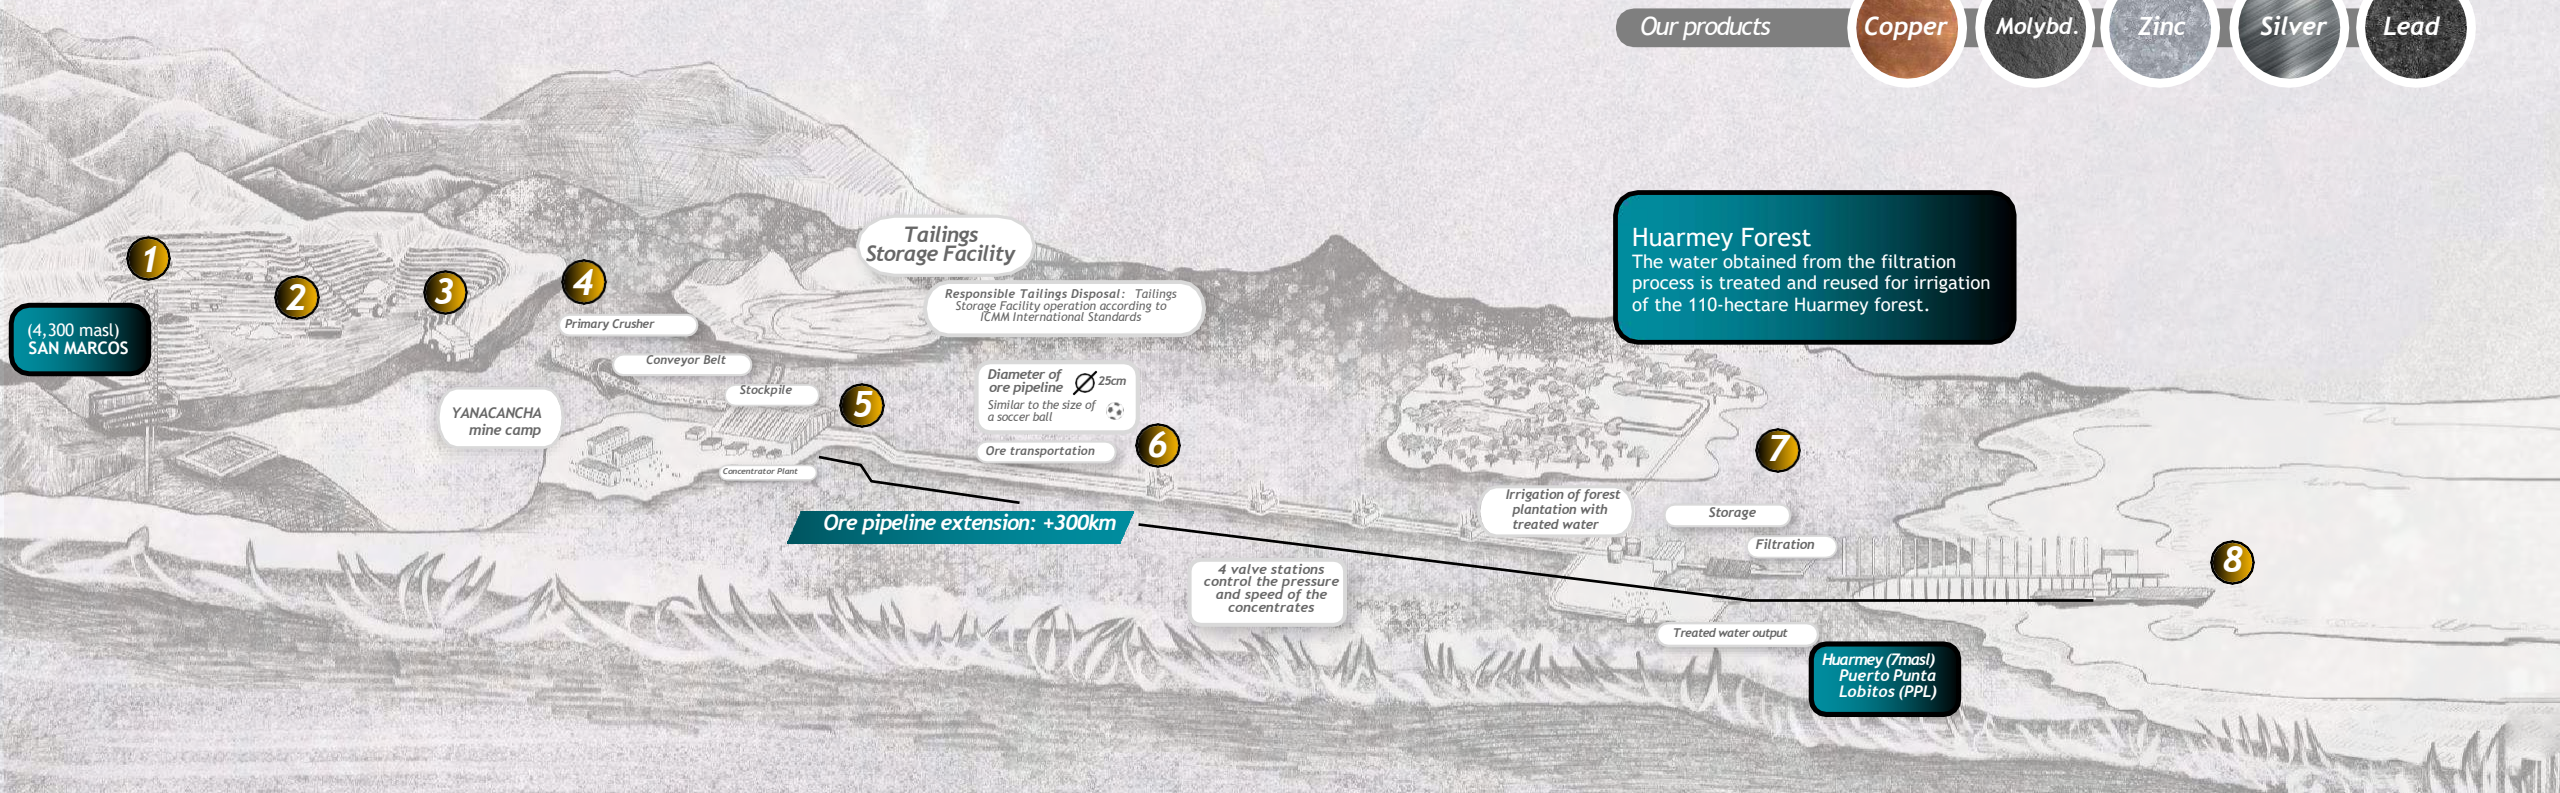

Copper

Molybd.

Zinc

Silver

Lead

Huarney Forest

The water obtained from the filtration process is treated and reused for irrigation of the 110-hectare Huarney forest.

1. Exploration

Cutting-edge drilling machines are used to obtain rock samples that are analyzed for their metal content.

2. Drilling and Blasting

Once the ore is located, mining and blasting is carried out to fragment the ground and proceed with extraction.

3. Loading and Haulage

The extracted ore is transported to the primary crusher.

4. Crushing and Stockpiling

The ore blocks are reduced in size and placed in separate piles.

5. Concentrator processes

Milling

High-capacity mills reduce the material size.

Flotation

Valuable metals are recovered through chemical/physical processes.

Pumping

The material is pumped into the ore pipeline.

6. Ore pipeline transportation

This pipeline transports copper and zinc concentrates, which is permanently monitored using a fiber optic system.

7. Port processes

The product is filtered until water content is reduced to 9.5% to facilitate its storage. The recovered water is treated to irrigate the Huarney forest.

8. Shipping

A state-of-the-art system enables an efficient loading system.

More than 1500
shipments
without
incidents

3.2 Production Statistics

Concentrate Production

- Copper and zinc concentrate production was higher than budgeted, influenced by the greater tonnage processed and improved recoveries, mainly in zinc.
- Copper (+56.7 KT) and zinc (+10.6 KT) production was higher than budgeted. However, molybdenum production was lower due to the reduced tonnage of M1 ore processed.

Concentrate Production				2023
Product	Actual	Budget	Difference	Variance (%)
Copper Concentrate (dmt)	1,533,233	1,476,509	56,724	3.8%
Zinc Concentrate (dmt)	917,139	906,566	10,573	1.2%
Molybdenum Concentrate (dmt)	7,201	9,929	-2,728	-27.5%
Pb_Bi concentrate (dmt)	3,470	3,960	-4990	-12.4%

Metal Production

- Copper, zinc and silver metal production was higher than budget by 2.1%, 1.4% and 2.4%, respectively. This was due to increased tonnage processed and copper and zinc recoveries, as well as the coordination and review of mine plans with the mine to mill process, ore blending, optimization of processes and plant operating variables, associated with the Antamina+ initiatives and projects, Machine Learning and process improvement using the Es+Lean methodology.
- Molybdenum metal production was lower than budgeted, mainly due to lower molybdenum recoveries and lower molybdenum head grades compared to the budget.

Metal production

2023

Product	Actual	Budget	Difference	Variance (%)
Metallic copper (mt)	421,824	413,253	8,571	2.1%
Metallic silver (mt)	360	352	8	2.4%
Metallic zinc (mt)	464,116	457,816	6,300	1.4%
Metallic molybdenum (mt)	3,500	4,815	-1,315	-27.3%
Metallic lead (mt)	1,609	1,690	-81	-4.8%

Processed Ore

- Ex-Pit production registered a -4% variation, with 9.4 million tons below budget.
- Processed ore tonnage at the concentrator plant was higher than budget by +3%.

Mine Production

	Actual	Budget	Variance	(%)
Total tons Ex-Pit (000 dmt)	245,682	255,082	9,399	-4%
Total tons moved (000 dmt)	274,891	298,261	23,370	-8%
Total tons milled (000 dmt)	55,316	55,887	1,429	3%
Copper equivalent (KTons)	579,970	584,989	5,020	-1%

We consider that the 2023 production in Antamina was successful due to the following:

- All four hot-seat shift-changes (Tucush, Rosita de Oro, Montura and 4448) were completed in February 2023.
- The arrival and assembly of 10 new KOM980 trucks for the mine fleet.
- A new annual record of total concentrate shipped with 2,717,405 WMT (previous record was 2,714,179 WMT in 2021).
- The third annual record of total concentrate filtered at the Port with 2,699,417 WMT (the maximum record was 2,744,007 WMT in 2022).
- Record zinc concentrate production of 917,139 dmt (previous record of 901,386 Ktm in 2021). Also, record zinc metal production of 464,116 mt (previous record of 462,666 mt in 2021).
- In 2023, 55.3 million tons of ore were processed, the second highest record in Antamina's history.
- High efficiency in the processing of M1 and M4B ores was achieved despite unplanned mill events, as well as weather conditions.
- Good OEI (Operational Excellence Index) results obtained, achieving the objectives in the operating areas where Lean was implemented, especially in the Concentrator Plant.

3.3 Operational Excellence

During 2023, Business Improvement Management provided a transversal service to the organization as a key support to advance operational excellence.

3.3.1 Milestones and Projects

In 2023, the Business Improvement Department was consolidated. This enables to:

- Identify opportunities for improvement in productivity, safety and cost efficiencies by the VP of Operations, defining the projects to be prioritized and ensuring their successful implementation.
- Strengthen continuous improvement capabilities through the reinforcement of Es+ Lean practices.
- Prepare the implementation of projects required to increase mining capacity in the long term.

We implemented different projects that generated transformational changes in Antamina, aligned with the principles of the International Council on Mining and Metals (ICMM):

- Dispatch 6.0 optimization.
- Implementation of Provision, MineCare3 and RemoteCare
- Consolidation of ShovelSense.
- ES+ LEAN. Launching by the Concentrator Management
- Implementation of the Backhoe Initiative
- Implementation of GET fall detection system for shovels
- Implementation of hydraulic shovel transfer system using Sleipner Skids.

3.3.2 Innovation and implementation of new technologies

The Innovation and Technology working group is composed of the following departments:

- Business Improvement
- Business Planning and Development
- Systems, Telecommunications and Process Control

What We Do

- These 3 departments analyze and develop concept studies and pilot tests and launch technological solutions in the operational areas.

What We Achieve

- A balanced approach between the needs and challenges of the operation, together with the integral evaluation of technological solutions considering change management challenges and sustainability in the long term.
- Initiatives focused on the application of new technologies to optimize our processes.
- The Innovation and Technology working group implements prioritized initiatives aligned to the main KVD (KPI) managed through the Antamina+ Program. In addition, it implements key technological enablers, including:
 - Successful implementation of SAP ERP and SuccessFactors - HR
 - Expansion and strengthening of communications platforms.
 - Deployment of the first wave of the Data Governance Program and strengthening of scalable technological architecture.
 - Consolidation of robust cybersecurity systems with ISO 27001 and CyberSOC re-certification.
 - Implementation of telecommunications services and internet access in communities.

3.3.3 Certifications

We value the importance of strictly complying with international standards that position us as a first-class mining company.

ISO 45001

Antamina has transitioned from OHSAS 18001 to ISO 45001 2018. This will be the new standard going forward for the Occupational Health and Safety Management System.

ISO 37001

The ISO 37001 Standard contributes to the prevention of bribery and promotes integrity and transparency in organizations.

ISO 9001

The ISO 9001 Standard maintains international standards for Quality Management Systems.

ISO 14001

The ISO 14001 Standard ensures proper environmental compliance throughout our operations.

ISO 27001

The ISO 27001 certification promotes information protection activities in organizations.

3.3.4 Antamina+

Antamina+ is a Continuous Improvement program that has consolidated as a key support for the company's operational excellence to face the challenges in the coming years of operation.

Global objectives

Improve productivity
Cost savings opportunities
Strengthen our culture
Establish a sustainable operation in harmony with the environment and the surrounding communities.

Objectives Accomplished

ANTAMINA+ incorporated initiatives that allowed us to improve our production KPIs and cost savings. We are currently working on goals that will help us lay the foundations and continue our operation successfully in the future.

These initiatives include the following:

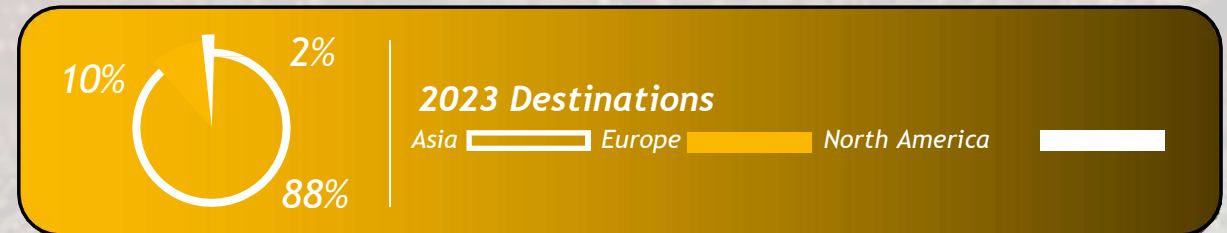

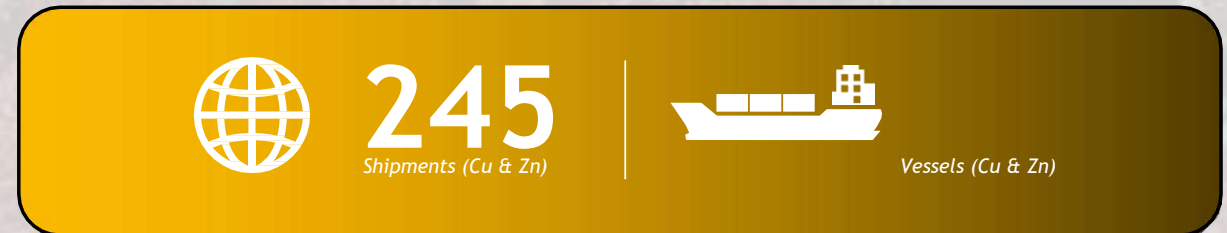

- a** **Concentrator Plant.** Machine Learning in M4B, reduction of liner weight and modification of the angle of attack in the SAG liners.
- b** **Mine Operations.** Reduction of operational stoppages due to lunch breaks with truck relays, increased production during the last hour and hot-seat shift-change.
- c** **Maintenance.** Outsourcing of Hitachi Shovel Maintenance Service, mobile workshop service for shovel and drill personnel, and SMEDs related to January and July plant shutdowns.
- d** **OPEX.** Real time monitoring of vital signs and vibrations in the P&H shovels, Usufruct and supply of 12-1/4" drill bits and Bidding and Optimization of Enabling Services Transportation and Marketing of Metallic and Other Non-Metallic Waste.
- e** **CAPEX** Change of contracting strategy in the W1-ORE Execution and Project Expense Control Model and Use of (1) New Mine Camp Module as an office to replace the Main Office.

3.4 Commercial and Traffic Management

In 2023, we fulfilled our commitment to ship all copper, zinc and molybdenum concentrates produced. We also managed to distribute the concentrates equitably among our shareholders, balancing the impurity content. During 2023, we shipped:

Total copper and zinc tonnage was delivered in shipments of approximately 11,000 wet metric tonnes (WMT), distributed in 87 vessels throughout the year:

Our concentrates are allocated to our shareholders based on their holding percentage, mainly shipped to Asia:

The most frequent port in Asia is Fangcheng (51 shipments), located in northern China, and the most frequent in Europe is Brunsbuttel (7 shipments), located in Germany.

The main 5 ports where our copper and zinc concentrates are shipped include:

Port	Shipments
Fangcheng	51
Nanjing	28
Qingdao	18
Xiamen	17
Zhapu	13

Regarding freight, the protocol for contracting the maritime freight service was signed in August 2023.

Subsequently, in September, new long-term freight agreements (COAS) were signed for a two-year period, to secure maritime space to ship our copper and zinc concentrates.

Period	Shipowner	Annual Production
Jan 24 - Dec 25	NSU	605k WMT (13%)
Jan 24 - Dec 25	TRAFIGURA	506k WMT (11%)

On September 21, 2023, three medium-term contracts (Sport Short Terms) were negotiated for a period of 9 months, to secure the shipment of 451K WMT of concentrates.

Period	Shipowner	Annual Production
Jan 24 - Sep 24	HORIZON	110k WMT
Jan 24 - Sep 24	SWIRE	165k WMT
Jan 24 - Sep 24	NSU	176k WMT

Finally, we successfully renewed the molybdenum off-take contract with our shareholders, which will be valid until December 2025.

3.5 Projects executed in 2023

Throughout 2023, operational performance was higher than planned. We achieved 101% of the budgeted CAPEX, with a 5% variance in CAPEX (US\$ 22 million) returned to the organization for reinvestment.

In 2023, we executed the following main projects:

- Completion of Phase VII of the Tailings Storage Facility on schedule to ensure operational continuity, recovering part of the delays caused by the pandemic in previous years.
- Approval of execution of Phase VIII of the TSF and execution of the first phase during the year, in a timely manner, to ensure operational continuity.
- Successful completion of Side Hill III, including an 980m tunnel, and an Intake Structure before the start of the rainy season.
- Completion of the TUSEF Waste Dump Feasibility stage, including Deep Dive sessions and preparation of IPR for early 2024.
- Completion of the risk assessment for the Tailings Storage Facility Feasibility Stage for final elevation, including hydrogeological studies and the seepage model.
- Completion of the Tailings Pumping System (TPS), addressing the operations punch list and maintaining an average efficiency rate of 99%.
- Implementation of a new non-contact water pumping system, the completion of Polishing Pond Barges, the new UCDC channel completed at 4165 elevation, and the parallel elevation of the national road to the same level.
- Completion of the Dam Toe Works Project and Water Pumping System with full rerouting of the Ayash Road and commissioning for continuous operation prior to handover to operations.
- Relocation of infrastructure below 4145 elevation and then 4150 elevation, including office, logistics warehouses, roads, 220KV, 23KV and 416V transmission lines, pipelines, and mine camp and temporary facilities on schedule for the advancement of dam raise works and other tailings level-raising elements.

- Record concrete production to support projects and operations of close to 10km³ in the year.
- Record aggregate processing production with annual output of 90km³.
- Ball Mill 3 stator replacement and preparation for Ball Mill 4 replacement in record time.
- Partial upgrade of Pebbles System with modification of conveyor belts, grizzly (partial) and crusher (procurement).
- Engineering, procurement and preparation for structural change of SAG mill components (cover and shell replacement).
- Progress of W1 ORE project with 100% of engineering, 100% of procurement and 70% of construction completed in preparation for commissioning.
- Completion of infrastructure projects, such as New Mine Camps and New Offices.
- The year ended with a capex execution efficiency of 97%, meeting quality standards with over 90% of quality observations addressed.
- The Es+Lean program was implemented and the deadlines for projects associated with the Tailings Storage Facility and the implementation of the W1 ORE project were optimized.
- CAPEX budget without significant claims that could affect the development of CAPEX, extremely minimized considering previous years, ending 2023 without unresolved claims, and with the scope, deadlines and costs planned for the next 5 years.

Our established goals include:

- Achieve Capex execution with respect to the Budget to remain above 95% in the coming years. To this end, coordination between the Finance, Logistics and Operations departments begins in the early months of each year to execute the projects as planned.
- Continue the execution of Tailings Storage Facility infrastructure Phase VIII - 4160 elevation, according to plan.
- Complete the execution of W1 Ore in 2024.
- Achieve an effective 5% savings in project costs through the continuation of the Es+Lean program.
- Resolve contractor complaints on an ongoing basis, for which the team has been strengthened.

Main perspectives for 2024:

In 2024, we anticipate making an investment of US\$ 364 million. Our main projects in 2024 include:

- Completion of the second phase of Phase VIII - 4160 TSF
- Completion of the W1 ORE project
- Completion of the new Pebble circuit.
- Completion of new infrastructure to 4165 elevation.
- Continue planning in line with the CAPEX 5Y and ensure execution in accordance with the planned scope, timelines and costs for the next 5 years.

3.6

Antamina MEIA

At Antamina, we have a project to extend the mine life from 2028 to 2036, on the same current operational footprint. To this end, we managed a Modification to the Environmental Impact Study (MEIA).

Renewed commitment to Ancash

- The brownfield mining project has a capital investment of approximately US\$ 2,000 million as from the approval of the file.
- This project will generate a direct economic impact that will result in a 1.3% increase in Peru's GDP and a 22% increase in Ancash's GDP.

The ABC of the MEIA

The MEIA does not entail an increase in production capacity, but rather an optimization of the efficiency and operational and environmental sustainability of the current components:

- Redesign of the pit to make it deeper and increase its area by 25%, always within the operations area, optimizing current controls to mitigate the generation of dust, noise and vibrations.
- Improvement of the crushing and transportation system for ore and waste, aimed at reducing size and directing both material to be processed and waste to the dump site through tunnels and conveyors.
- Expansion of the existing waste dumps to receive an average of 30% more waste, taking great care with water management.
- Increase the capacity of the tailings storage facility, with the same safety and stability conditions of the dam, and preserving the water collection and treatment system.

Actions taken

- All 723 observations from SENACE, ANA and other technical reviewers were robustly addressed, providing technical and legal certainty to the process.
- Antamina's team engaged in continuous work to identify potential observations and complex issues that could delay the evaluation process.
- The efforts made during 2023 helped to obtain approval of the implementation plans for the new Environmental Quality Standards (EQS) for water, air and noise.
- All citizen submissions received were responded to within the legal deadline, and even beyond what was established in the regulations.

SUSTAINABILITY REPORT

20
23

Chapter 04

Sustainability
The path to development

4.1 *Our people*

Our Human Resources department has developed a strategic roadmap in line with the organization objectives.

Integral welfare

Antamina's value proposition also includes additional and non-mandatory benefits that seek the welfare and quality of life of workers under the guidelines of our Health, Safety and Environmental Policy.

Competitive welfare benefits

We offer competitive welfare benefits, leading the mining sector by being the only mining company that offers medical attention at no cost for its workers and their beneficiaries.

- 1 Health Care Providers (HCP)
- 2 Medical specialties
- 3 Additional policies

Healthy Company

We aim to build a healthy company with a safe physical work environment that inspires and encourages a preventive culture, based on 5 pillars:

- 1 Prevention
- 2 Health
- 3 Work - Life Balance
- 4 Sense of community
- 5 Assistance to workers and their families

Purposeful administrative processes

We constantly monitor the main administrative processes of the integral wellness program in order to identify opportunities for improvement and efficient prevention plans.

- 1 Training on the "Viva Salud" Platform

SO ⁴²Mo S
95.95
+BIENESTAR

Programa Integral de Bienestar

Integral welfare Healthy Company

We build a healthy company with a healthy and safe physical work environment that inspires and encourages a preventive culture.

1 Prevention

We promote awareness of the importance of prevention and comprehensive health care.

2 Health

We promote health care (mind and body) through healthy habits.

3 Work - Life Balance

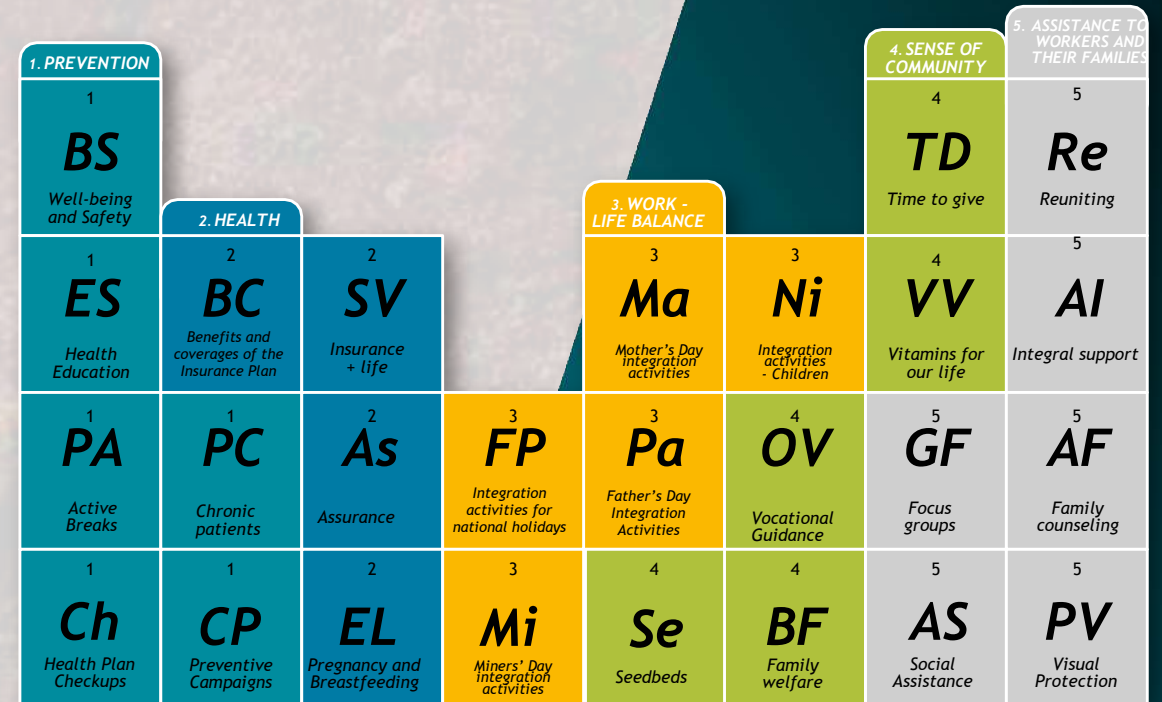

We promote work-life balance, generating integration between work and family, fostering a sense of belonging and loyalty.

4 Sense of community

We foster a sense of unity, solidarity and support among our employees through wellness and volunteering programs.

5 Assistance to workers and their families

We generate spaces to accompany workers and their families, promoting personalized communication and the dissemination of content to support family welfare.

4.1.1 *People Management*

In Antamina, we prioritize a work culture whose core values are the health and safety of each of our employees, but we also strive to maintain a policy of inclusion and equal opportunities, while promoting local employment dynamism.

4.1.2

Diversity and inclusion

We have a Diversity, Equity and Inclusion (DEI) Policy, and we have also implemented the +Voices Program.

They seek to promote:

- > Respect
- > Trust
- > Sense of belonging
- > Freedom of expression

4.1.3 Workplace Climate

Merco Talent Ranking

Antamina was recognized as the Best Mining Company in Attracting and Retaining Talent in Peru, for the eleventh consecutive year.

Top 5 among the 100 best companies in Peru.

Safety

We have developed the “+Cultura Preventiva” Program through the strengthening of visible leadership and communication skills.

“Juntémonos para conversar” (Let’s talk) Program

This program was implemented with the goal of hearing our employees’ perceptions, addressing their needs and creating shared solutions through dialogue in an environment of respect and trust.

4.1.4 Trainings

In 2023, the Organizational Learning Department consolidated the management of corporate training.

The entire workforce (men and women) received at least one training course.
71% of the learning hours were classroom-based.
29% of learning hours were conducted remotely.
92% of the annual learning plan 2023 was met.
83,294 training hours were completed (Environment, Health and Safety, and others), with an average score of 93% in knowledge or competency tests.

4.1.5 *Welfare and benefits*

➤ As a result of the organizational health survey (2022), several initiatives were implemented:

- Strengthening of the onboarding program.
- Optimization of the planning by objectives methodology
- Strengthening of the Bravo Recognition Framework

➤ “Somos + Bienestar” Program

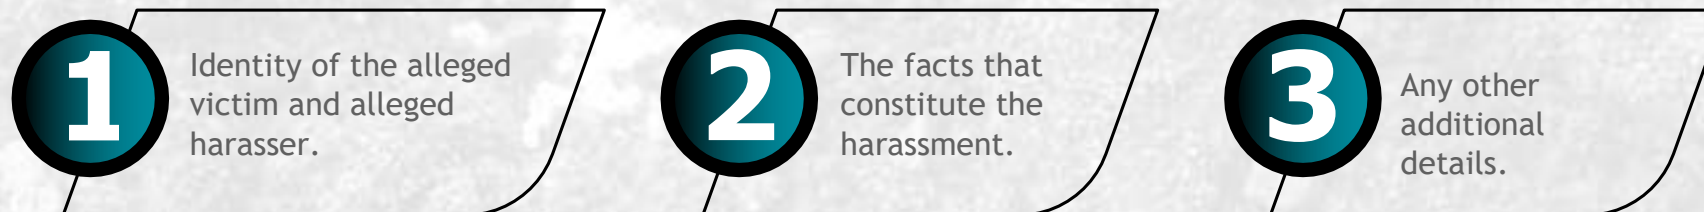

- This program is based on five pillars:
- A Prevention
 - B Health
 - C Conciliation
 - D Sense of community
 - E Employee assistance

4.1.6

Procedure against harassment in the workplace

In the event of a harassment case, the procedure would be as follows:

File the complaint orally or in writing with Human Resources or through Antamina's Ethics Hot Line including the following information:

Complaints or reports shall be submitted through any of the following means:

- In case the alleged harasser is the head of the HR area, the complaint will be filed directly with the VP Legal & Compliance.
- We will determine the existence of workplace harassment and protect the victim at all times.
- We will sanction the employee(s) involved. We will ensure a confidential, unbiased, prompt and effective investigation.

Victim protection measures

The Labor Relations department will have **3 working days** from receipt of the **claim/complaint** to issue a decision. If applicable, one of the following **protection measures** will be taken for the alleged victim:

1. Rotate or change the alleged harasser's workplace.
2. Temporarily suspend the employment relationship with the alleged harasser.
3. Rotate or change the victim's workplace, provided that he/she has so requested.
4. The alleged victim should be granted vacation time, if requested.
5. The alleged harasser should be informed that he/she will be issued an order preventing him/her from approaching the alleged victim or his/her family environment, or from engaging in any type of communication with the victim.
6. Seek other measures to protect and ensure the victim's well-being.

4.2 *Occupational Health and Safety*

For our company, the most important and valuable asset is our human capital. We have a Health Management department, responsible for the care and protection of our employees.

4.2.1

Safety and Prevention Culture

Strategy for Strengthening the Prevention Culture

A set of activities was developed together with the Dupont Sustainable Solutions (DSS+) team to assess the maturity of our prevention culture.

Health promotion and prevention programs

We have carried out massive vaccination campaigns against COVID-19 and influenza. We encourage physical activity, good nutrition and restful sleep. We provide Physical Therapy, Nutrition and Occupational Psychology services. We have Home Ergonomics programs for employees who work remotely.

Monitoring

We ended 2023 with zero occupational diseases thanks to prevention, early diagnosis, timely treatment and rehabilitation efforts.

Occupational Hygiene and Ergonomics

We have a team of specialists in Occupational Hygiene & Ergonomics, highly specialized and committed to the identification and control of occupational risk factors.

Medical Centers: comprehensive care

Our facilities are equipped with highly trained personnel in internal medicine, traumatology and emergencies, available 24 hours a day, 7 days a week, to address the medical needs of our employees and contractors.

Caring for mental health

In 2023, psychotherapeutic care was provided to 600 Antamina and Strategic Partners' employees and 400 direct family members of our employees.

4.2.2

2023 Safety indicators

- Recordable Accident Frequency Rate (TRIFR) of 0.69.
- Recordable Accident Severity Rate (TRISR) of 11.1, slightly higher than that achieved in 2022 (10.23).
- All vehicles providing services to Antamina (1,600 vehicles in 2023) have an Anti-Fatigue System (AFS).
- In 2023, more than 65,800 trips were made and more than 23 million kilometers were traveled transporting goods and personnel, without any recordable traffic accident.

4.2.3

Health indicators

- Occupational Illness Frequency Rate (OIFR) = 0
- Occupational Illness Severity Rate (OISR) = 0
- Compliance with risk control and occupational hygiene projects = 100%.
- Compliance with hygiene, ergonomics and health surveillance standards by strategic partners = 90%

4.3 Social Management

We operate a system to achieve sustainable development, where Antamina and other stakeholders contribute equally to the implementation of social policies and development programs.

4.3.1

Promoting a mature institutional framework

Spaces for dialogue

Across our OIA, we have Territorial Management Units (UGTs), spaces where we encourage dialogue between the Government, the community and the company. We establish relationships based on respect, transparency and trust.

-  UGT Mine / San Marcos
-  UGT Valle Fortaleza
-  UGT Huallanca
-  UGT Huarmey

We also promote Environmental Committees, where we address the socio-environmental concerns of our stakeholders and communicate our environmental performance. We work together with our communities and authorities in environmental monitoring activities, promoting a transparent and harmonious relationship.

> Social Management System

The system components and tools include:

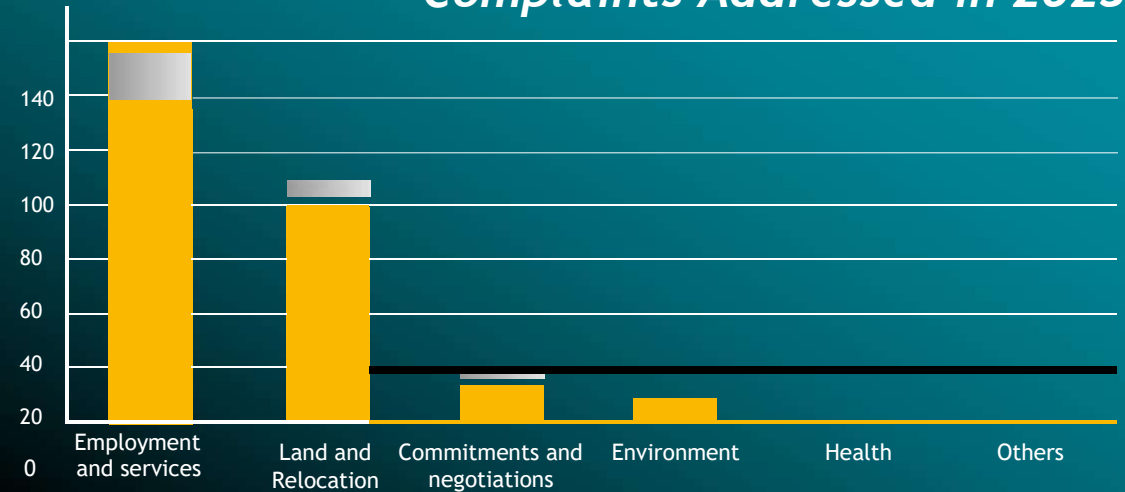

Complaint Management

Antamina has a complaint mechanism in place to identify, prevent and address real or perceived impacts of its activities.

In 2023, the following initiatives were put in place in relation to accessibility, internal management and mechanism communication:

- > Expansion of service channels and deployment of a communication plan in the Operational Influence Area (OIA).
- > Strengthening of the systematization matrix and monthly reporting of indicators.
- > Updated Complaints Management Procedure

Complaints Addressed in 2023

 **In process to be addressed.**
 **Addressed/Closed.**

*The main grievance category during 2023 was "Jobs and Services".

*The largest number of complaints came from the territories closest to the operation.

*Almost 90% of the 259 complaints registered in the year were addressed.

Management of commitments

Antamina has a commitment management procedure with the objective of ensuring aligned and transparent processes for planning, execution, monitoring and compliance with the social agreements signed with stakeholders.

During 2023, we continued to address the improvement opportunities of the 2022 Internal Audit of Shareholders.

The following improvements were incorporated:

- Specific objectives (so that they are evaluated based on proposed KPIs)
- New engagement underwriting channels
- Modification of commitment approval stages
- Clarification of verification methods for compliance with commitments
- Inclusion of commitment renegotiation whenever modifications to the scope or compliance schedule are required
- Modification of evidence filing and documentation activities.
- Monitoring KPIs in accordance with the proposed targets

In 2023, the following results were achieved:

SUMMARY	UGT					
CLASSIFICATION	TOTAL	MINA	SAN MARCOS	HUALLANCA	VALLE FORTALEZA	HUARMEY
COMMITMENTS ENTERED INTO IN 2023	43	25	0	18	0	0
COMMITMENTS CLOSED IN 2023	34	22	1	4	1	6
TOTAL CLOSED COMMITMENTS	91	13	74	3	1	0

Human Resources

Our Human Rights Policy is the main document that guides our actions and defines the expected behavior in terms of Human Rights. MAN-HOURS

During 2023, Antamina updated its Human Rights Policy, which was approved by the Board of Directors and is available on our website.

In addition, between November 2022 and April 2023, we conducted our most recent Human Rights Due Diligence assessment. As part of this study, we undertook a process to identify and analyze human rights risks, both in our own operations and for our Strategic Partners.

Likewise, a study of perceptions in Strategic Partners was developed with the support of a specialized consultant who conducted 50 interviews to a total of 26 Antamina's supplier companies to know their perceptions about our human rights management.

During 2024, the Human Rights Operational Plan will be updated with a view to implementing the findings and recommendations of the due diligence study.

➤ Local Development

Project Management Office (PMO)

In 2023, Antamina supplemented the Works for Taxes (OxI) model with a technical assistance model to strengthen management capacities across the state investment cycle.

Regarding the San Marcos District Municipality, record investments were registered in the first year of the current administration: by the end of 2023, the municipality had executed more than S/ 246 million, thus becoming the second district with the highest amount executed in Peru.

In 2024, this successful San Marcos model will be replicated with the Ancash Regional Government in a prioritized portfolio of 34 public investment projects. This will leverage resources from this entity to the districts within our OIA that receive scarce resources from canon and mining royalties.

Promotion of economic activities

The Regional Government, in collaboration with Antamina, developed a regional competitiveness plan to improve competitiveness and planning in the Ancash region. Tourism was highlighted as a long-term growth engine and the need to modernize the Anta airport and prepare it to receive commercial flights.

A public-private process was carried out with Ancash authorities and associations to manage the permits required by the Peruvian Government, and thus achieve the investment to commission this infrastructure.

The airport improvement works started in August 2023. The investment was made by Aeropuertos del Perú (AdP), the airport concessionaire.

In line with boosting the tourism sector in the region, Antamina continues to support the Archaeological Research and Conservation Program of the Chavín de Huántar Archaeological Site.

In coordination with the Regional Government and its Economic Development Office, support was provided to 10 companies from various sectors (cheese, bread, liquor, dairy products, jams, fortified foods, etc.) at the 2023 Expoalimentaria Fair, allowing them to showcase the region's products.

4.3.2 Closing infrastructure gaps

Antamina and Ancash: partners for the sustainable development of a region with multiple

growth opportunities.

> Statistics as of the end of 2023:

67 Oxl agreements for S/1.89 billion.

Investment in 2023: S/349 million

Investment executed from 2013 to 2023: S/1,423 million

Certified recovery in 2023: S/380 million

Certified recovery from 2013 to 2023: S/1,059 million

Man-hours during 2023: 5.4 million

Man-hours worked from 2013 to 2023: 19.3 million

Workdays generated in 2023: 670,000

> By government level:

The 67 Oxl projects mentioned above are distributed as follows:

Peruvian Government:

29 projects for a total of

S/1,372.4 million

Regional Government:

4 projects for a total of

S/218.8 million

Local Government:

34 projects for a total of

S/298.3 million

> By sector:

Health:

6 projects

Sanitation:

13 projects

Irrigation

19 projects

Road Infrastructure:

11 projects

Education:

15 projects

Others:

3 projects

Flagship works developed in 2023:

- A Huari Hospital
- B Llata Hospital
- C Huarmey Hospital
- D Water and Sanitation of Huarmey
- E Ancash COAR

4.3.3

Generating opportunities for future generations

We undertook various efforts to break the cycle of intergenerational transmission of poverty and lack of human development. We promote equality in all the stages that the new generation goes through from birth to their incorporation into society.

Early childhood development

By working collaboratively with Peruvian State institutions to benefit the population, we accomplished the following:

- Ensured the delivery of services to pregnant mothers, contributing to a healthy birth.
- Ensured services for children under two years of age, contributing to healthy growth and development, preventing anemia and chronic malnutrition.
- Ensure access to chlorinated water consumption for families.

Improving Educational Quality

- We seek to ensure that all people have equal access to educational opportunities.
- We promote high-quality, comprehensive education so that people can develop to their full potential.
- We provide access to the internet and technology for digital learning.
- We facilitate access to higher education for young people in our OIA by providing technical and university scholarships.
- We promote educational opportunities that allow young people to advance in their academic and professional careers.

Featured Projects

- **Strengthening of Local Management (FOGEL, by its acronyms in Spanish)** Support to 13 districts of direct influence through the work of Health Committees, collaborating with local governments and healthcare facilities.
- **Ancash Effect.** We work to improve the quality of education through learning achievements and the development of socioemotional skills, providing support to more than 3,800 students directly in 42 educational institutions, and 18,000 indirectly.
- **More Education.** We improved connectivity in the region, allowing access to the Internet and promoting digital literacy, including the delivery of Internet data tables and chips to 6,640 students and teachers.
- **“Más Progreso” Scholarship.** In recent years, 4,041 scholarships have been awarded for studies at Stratedu, Senati, Tecsup and the Pontificia Universidad Católica del Perú.

4.3.4

Local entrepreneurship and productive development

Our vision is based on the belief that sustainable economic growth must be inclusive and embrace all sectors of society. Likewise, through the promotion of private investment, productive transformation and leveraging the comparative advantages of our region, we are creating an environment that not only depends on mining, but also embraces economic diversification.

Objectives

- **Promotion of Local Productive Diversification.**
We are improving connectivity in the region, enabling Internet access and fostering digital literacy.
- **Strengthening and Formalization of Enterprises.**
We recognize the value of local entrepreneurs in job creation and economic development. Our goal is to support these entrepreneurs, helping them to formalize their operations, strengthening their capabilities and providing them with the necessary tools to prosper.
- **Attraction of Private Tractor Companies.**
We understand that in order to achieve sustainable productive development, it is essential to attract private companies to act as drivers of growth. We facilitate access to these companies, fostering partnerships that benefit the community as a whole.

4.3.5

Local purchases and services

Our purchasing and supplier relations activities have a positive impact on the company's development and make us an important hub for commercial exchange.

We maintained commercial relations with 1,297 suppliers, resulting in purchases and services totaling US\$ 1.984 billion.

US\$ 1.787 billion in purchases and services from domestic suppliers.

US\$ 49.28 million for 113 suppliers in the Ancash region.

4.3.6

Emergencies: prevention and care

Our social responsibility work is focused, in part, on actions and response measures to face emergencies and disasters, but also to prevent health impacts.

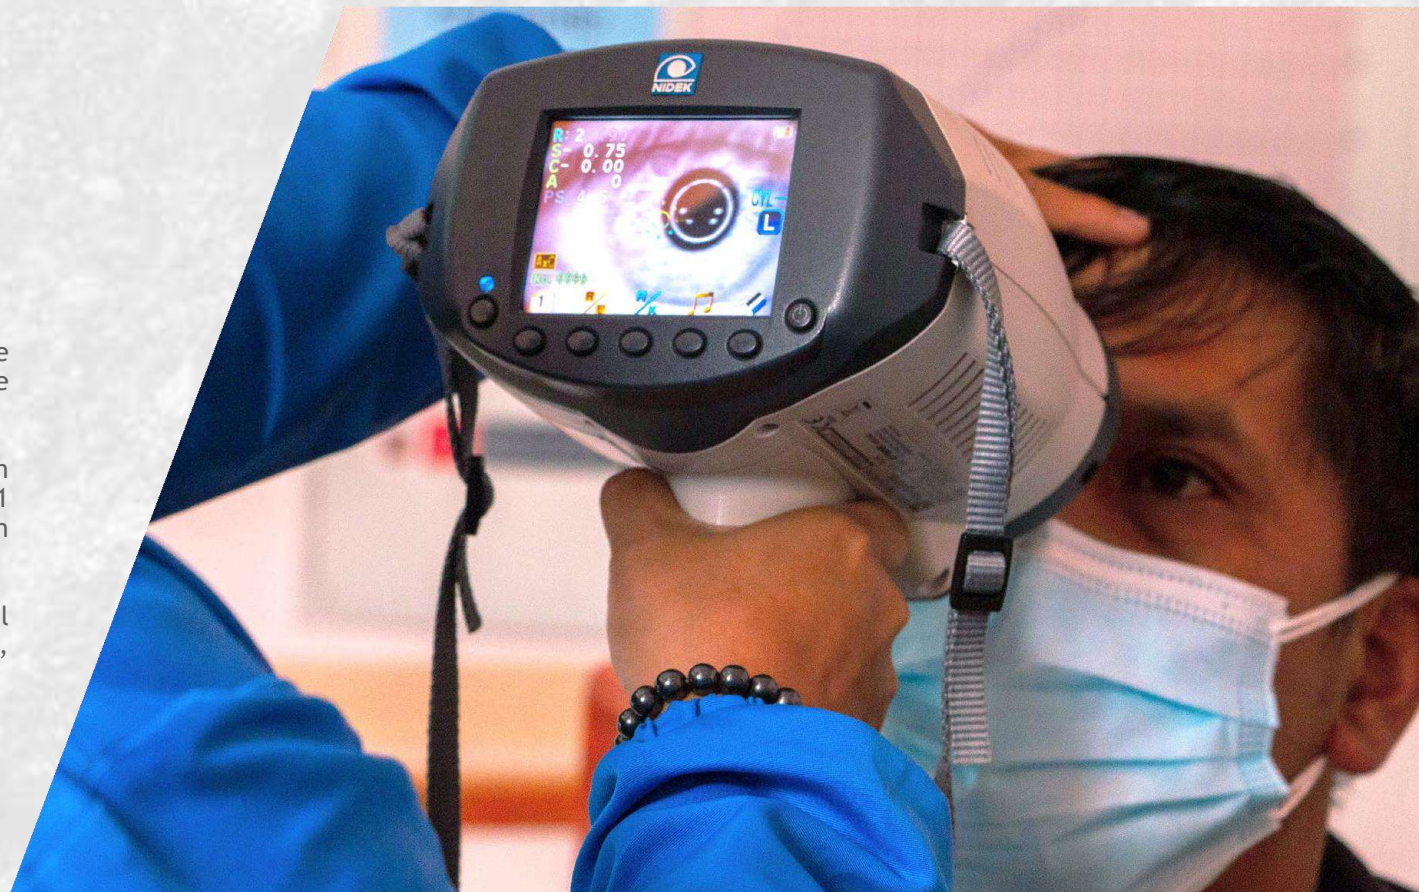

Response to climatic emergencies

- The Ancash region is constantly exposed to natural disasters related to climatic factors due to its geographical location and the characteristics of its territory.
- After the Yaku cyclone in the first quarter of 2023, Antamina developed works with heavy machinery in several national and departmental roads of Ancash to restore trafficability, and provided humanitarian support to populations that were cut off by donating food and fuel.
- After signing an agreement with the National Institute of Civil Defense (INDECI), training sessions were held for public officials in disaster risk management to prepare response strategies.
- After signing an agreement with the Geological, Mining and Metallurgical Institute (INGEMMET), geological risk studies were conducted on the Shallapa and Nunupata hills, in Chavín de Huántar, to adopt measures to protect the archaeological monument.
- As part of the technical assistance work for disaster risk management in the Aquia district, Antamina undertook to appoint a technical team to prepare 12 Risk Assessment Studies (EVAR). These documents were prepared and delivered to the Aquia District Municipality in December 2023.

> Health campaigns

- Continuing with the specialized medical campaigns, we attended people from San Marcos, Huallanca and Valle Fortaleza, among other districts and communities.
- The schedule contemplated three months of medical attention from September to November 2023, reaching a total of 8,771 people attended, representing 2,000 more medical attention than in 2022.
- Citizens had access to medical consultations in Internal Medicine, Pediatrics, Cardiology, Gynecology, Dermatology, Ophthalmology and other specialties.

4.4 *Environment*

At Antamina, we have incorporated environmental management as part of our operational management since the beginning of our activities more than 20 years ago. This is evidenced by the environmental results of 2023.

4.4.1

Water resource management

-  We manage water responsibly and do not compromise local communities' access to natural water sources in our area of direct influence.
-  As our main source of fresh water, we use an artificial dam that collects water during the rainy season. This ensures that we do not compete with other users for water.
-  As part of our community engagement, we participate with the environmental committees of neighboring communities and local authorities in participatory monitoring of water quality and raising awareness of the proper use of water resources
-  During 2023, our main achievements in water reuse during the mineral concentration process were as follows:
 -  We implemented predictive water quality models to anticipate quality in short-term operating scenarios, facilitating decision making.
 -  The Water Management Policy was developed, as well as the Water Management operating standard, which establishes the general guidelines for water management, in addition to roles, responsibilities, operational procedures and records.

Table: Total water used in mine operations from 2018 to 2023

Use of water	2018	2019	2020	2021	2022	2023
Fresh water (%)	0.83	1.47	2.4	2.8	2.2	2.2
Process water (%) (recycled)	99.07	98.53	97.6	97.2	97.8	97.8

Total water used in operations from 2020 to 2023

Water consumption (in megaliters)		2020	2021	2022	2023
Water extraction by source	Total surface water	14,799.3	16,655.1	16,779.3	16,762.9
	Fresh water (total dissolved solids ≤1000mg/l)	14,799.3	16,655.1	16,779.3	16,762.9
	Total groundwater	1,978.3	2,364.1	2,539.7	2,380.6
	Fresh water (total dissolved solids ≤1000mg/l)	1,978.3	2,364.1	2,539.7	2,380.6
	Total produced water	67,545.8	69,484.5	84,301.9	75,898.6
	Process water (total dissolved solids ≤1000mg/l) ₂	67,545.8	69,484.5	84,301.9	75,898.6
Total water extraction		84,323.4	88,503.7	103,620.9	95,042.1
Water discharge by destination					
Surface water		23,975.9	32,152.6	31,415.4	33,825.7
Total water consumption (total water extraction - total water discharge)		60,347.4	56,351.1	72,205.5	61,216.4

2023 Compliance indicators

Indicator	2022 Compliance	2023
Water Quality Compliance in Discharges (vs. LMPs)	100%	100%
Compliance with the Volume of Discharges (vs. ANA Permits)	100%	100%
Compliance with EQS for water (referential)	100%	100%

4.4.2 *Air Quality*

We understand the importance of managing and controlling the particulate matter generated by our mine operations. We constantly carry out exhaustive monitoring to manage the air quality of our operations and mitigate any negative impact.

Air quality is a cross-cutting issue, which is addressed through the Air Quality Committee, composed of the Mine Operations, Maintenance, Social Management, Environment, and Engineering and Projects departments. New improvement initiatives are planned there, as well as the rigorous follow-up of projects for their effective implementation.

During 2023, this committee proposed and implemented 4 main activities:

- 1 Automation of the additive system: the design, procurement and construction of the automatic dust suppressant additive system was completed.
- 2 Enabling new tanks: 2 new 55,000 Gal capacity Westech® tanks were purchased and the new WT15 and WT16 tanks were assembled, improving the autonomy of the irrigation fleet.
- 3 Sprinkler irrigation in Phase 10 of the mining works: 1,100m sprinklers were installed on 4448 Ramp access to Phase 10.
- 4 Activation of irrigation cistern control in auxiliary roads, including contracts with local companies.

Antamina permanently reports all environmental monitoring results to the responsible authorities (OEFA, DGAMM-MINEM).

4.4.3

Waste Management

- Antamina reinforces responsible waste management, focused on reuse, recycling and/or recovery strategies, as well as reduction and minimization from generation. Therefore, initiatives for efficient and circular use of resources and materials have been incorporated.
- Once the waste has been generated, the appropriate segregation, conditioning, habilitation, transfer, treatment and recovery are implemented, with final disposal being the last management alternative. These activities are carried out by solid waste operating companies (EORS) specialized in identifying opportunities for permanent improvement.
- In 2023, 89% of the waste generated at Antamina (Yanacancha and PPL) was non-hazardous waste, while hazardous waste accounted for only 11%.
- With respect to recovery, 67% was achieved in 2023. This percentage is calculated on the basis of waste recovered through some strategy (marketing, recycling, reuse, etc.) and waste sent to final disposal, not including waste stored at the operation. 16% of the total waste recovered corresponds to hazardous waste.
- 88% of the waste sent to final disposal corresponds to non-hazardous waste and 12% to hazardous waste.
- In 2023, Antamina sent to final disposal only 26% of the total waste generated.

Type of waste	Waste composition	Waste generated (t)	Waste for recovery (t)	Waste for disposal (t)	Waste stored (t)
Non-hazardous waste	Organic	3,654.2	211.2	3,443.0	
	General inorganic	2,820.0	-	2,820.0	
	Metals	11,941.7	11,941.7	-	
	Recyclable	242.1	242.1	-	
	Used cooking oil	24.7	24.7	-	
	Decommissioned tires	5,722.3		-	5,722.3
	Sub Total (t)	24,404.9	12,419.6	6,263.0	5,722.3
	%	89	84	88	100
Hazardous waste	Used oil	2,001.1	2,001.1	-	
	Antifreeze	168.6	168.6	-	
	Miscellaneous contaminated with hydrocarbons	477.1	-	477.1	
	Bio contaminated	14.7	-	14.7	
	Others contaminated with chemicals	222.9	-	222.9	
	Material with concentrate	149.7	-	149.7	
	Waste from Electrical and Electronic Equipment (WEEE)	63.0	63.0	-	
	Used batteries and cells	64.5	64.5	-	
	Sub Total (t)	3,161.6	2,297.2	864.4	0.0
	%	11	16	12	0
	Total waste (t)	27,566.5	14,716.8	7,127.4	5,722.3
	Recovered waste (%)		67	33	

At Antamina, we are committed to developing circular value chains, such as:

- Metal waste (12,000 tons production in 2023) was commercialized thanks to a strategic alliance with Aceros Arequipa, achieving that 99% is reentered into new productive chains.
- The reuse of waste oil generated in the operation (Yanacancha and PPL) in mining activities, such as blasting (+200,000 Gal), prevented up to 23 return trips as hazardous waste on an external route and its subsequent final processing.
- As for non-hazardous and recyclable waste (paper, cardboard, metal sheets and electrical appliances), more than 305 tons were handled through formal recovery and recycling chains, donating the sale value to NGOs that administer social programs, such as Aniquem and Aldeas Infantiles.

Type of waste	Valuation operation	On-site (t)	Off-site (t)	Total (t)
Non-hazardous waste	Paper and cardboard pulp recycling	-	237.5	237.5
	Polyethylene Terephthalate plastic recycling (bottles and caps)	-	4.6	4.6
	Metal waste smelting	-	11,941.7	11,941.7
	Wood reuse	-	85.7	85.7
	Organic waste composting	-	125.5	125.5
	Edible oil recycling	-	24.7	24.7
	Subtotal (t)	0.00	12,419.6	12,419.6
Hazardous waste	(%)	0	88	84
	Reuse of oil used in blasting	653.54	-	653.5
	Refining of used oil	-	1,347.6	1,347.6
	Refining of antifreeze	-	168.6	168.6
	Battery recycling	-	64.5	64.5

	Subtotal (t)	653.54	1,643.7	2,297.2
	%		12	16
	Total	653.54	14,063.26	14,716.80

4.4.4 Biodiversity

We manage biodiversity in our operations and apply a hierarchy of impact mitigation. During 2023, we implemented the Biodiversity Action Plan (BAP) in line with our EIA commitments in both the Mine Operations (Yanacancha) and Punta Lobitos Port (PPL) areas in Huarmey.

The Biodiversity Action Plan (BAP) includes:

- We monitor flora and fauna at the mine, evaluating population trends of flora and fauna to validate the effectiveness of environmental controls and their impact on the immediate biological environment.
- We conduct hydrobiological monitoring in mine and port to evaluate aquatic conditions and biological communities (plankton, macroinvertebrates and fish).
- Bird monitoring at PPL.
- These activities are carried out at the end of the wet and dry seasons in both mine and port. Antamina has implemented the IFC N°6 performance standard for its Biodiversity Action Plan (BAP).
- Fourteen species of flora that have priority for conservation (floristic sweep) were evaluated.
- We have evaluated the reptile *Liolaemus chavin* in the area surrounding the mine, to gain more knowledge about its ecology and distribution.
- We conducted an analysis of *Grallaria andicolus* and *Geocerthia serrana* bird populations and confirmed reproduction and distribution around Mina.
- We conducted an analysis of rodent populations *Akodon juninensis* and *Calomys sorellus* in the vicinity of Mina.

Biodiversity management considerations to be taken into account:

- Mine operations are located at a distance of 13 kilometers from the Natural Protected Area (NPA) Huascarán National Park, which was declared a World Heritage Site by UNESCO. In the case of Puerto Punta Lobitos, the closest PNA is the National Reserve of the System of Islands, such as Islets and Puntas Guaneras, Punta Culebra, which are located 12 kilometers away. Due to this proximity and relevance, we maintain a constant monitoring of biodiversity in the areas of environmental influence both in the mine (Yanacancha, Huari) and in the port (PPL, Huarmey), covering an area of approximately 24 thousand hectares (including the 3,200 hectares of the mine operation area).
- Biodiversity monitoring around our operations has been conducted since 1997, with a 25-year database, which is a valuable environmental asset. This database allows us to prioritize and outline short, medium and long-term actions.
- Biodiversity monitoring evaluates potential changes in three fundamental biological categories: hydrobiology (aquatic life), wildlife, and floristic composition and vegetation groups. For each of them, we apply specific and standardized methodologies, which allow us to generate quantitative and comparable information on the seven types of terrestrial ecosystems and two aquatic ecosystems involved.
- According to the results obtained in the 2023 biodiversity monitoring, we recorded no significant changes in the ecological indicators around our operations, both in Yanacancha and Puerto Punta Lobitos.

“Cruzada Verde” Initiative

Regarding environmental management with neighboring communities, a 10-hectare forest plantation was planted on the border with the Juprog village, as part of the “Cruzada Verde” Initiative of the Ministry of the Environment (MINAM). Likewise, a specialized documentation of the local medicinal plants and their uses is being developed with the same village, which has already had a first publication.

Finally, in Huarmey, awareness and protection activities are being developed towards the Humboldt Penguin populations, which is a bird protected by the Peruvian State, categorized as an endangered species. This species has one of the largest colonies on the Peruvian coast near Huarmey, and Antamina sponsors its regular monitoring.

4.4.5 *Tailings and waste management*

The safe and environmentally responsible management of extracted tailings is an essential aspect of the industry and a growing expectation that Antamina has fully adopted since the beginning of the project.

We are committed to conducting annual reviews of our tailings facility, and to being open and transparent with communities and other stakeholders regarding the construction, operation and management of these facilities.

Our reviews have different levels of protection, including internal and external reviews that generate recommendations for continual improvement. All recommendations are aligned with best engineering and governance practices. We develop action plans based on this and regularly evaluate the implementation of these plans.

Key environmental achievements in 2023 were as follows:

- An independent assessment of the level of implementation of the Global Industry Standard on Tailings Management (GISTM) for the Mining Industry was conducted at the Antamina tailings dam, having a high level of compliance, e.g., 77 GISTM requirements were assessed, 65 requirements have been met or partially met, while 12 requirements have been deemed not applicable to the Antamina tailings facility.
- A residual work project was initiated to be implemented between 2023 and 2026 to maintain and improve our alignment with the GISTM. This project is being developed and Antamina is permanently monitoring it.
- A platform for storage and management of all technical, social and environmental information related to the tailings storage facility (TWIMS) was implemented.
- Antamina's research advances regarding the co-disposal of waste rock and tailings materials were shared with the mining industry and at national and international events. Co-disposal could be an innovative solution for tailings disposal and sustainable resource management in the mining industry.
- An independent consultant conducted the tailings dam safety review (DSR), which encompasses the review of the design, operations, management and governance of our tailings facility. It was concluded that our tailings facility is reasonably safe.
- An external consultant conducted a review of the design of our tailings storage facility, including current and future structures, determining that the design meets international and Peruvian design standards and expectations.

4.4.6

Carbon footprint reduction

-  We calculate the carbon footprint of our activities according to the Greenhouse Gas Protocol (GHG Protocol) and the Intergovernmental Panel on Climate Change (UN-IPCC) guidelines, as well as ISO Standard 14064:2018 - Part 1.
-  The calculation is verified by an accredited external body (SGS). Since 2014, these results are published annually in our Annual Sustainability Reports and, since 2019, also through the voluntary public platform "Carbon Footprint Peru", implemented by MINAM, an entity that has awarded us the recognition of two stars for the calculation and verification of our footprint.
-  In 2023, we achieved the following:
 -  We maintained GHG emissions from our operations around our baseline values updated to the year 2021.
 -  We incorporated indirect emissions from downstream and upstream transportation and distribution of goods into our GHG calculations.
 -  Our reduction targets for 2030 and 2050 were designed and approved, as part of a transition to a carbon neutral economy, in line with the commitments already made by our stakeholders to the 2015 Paris Agreement.
 -  We assessed the environmental risks associated with energy use and GHG emissions in the project planning stages, in a medium- and long-term strategy to diversify energy sources, as well as lower CO₂.

In 2023, our total GHG emissions (category 1 and category 2), as CO₂ equivalent, were 840 kilotons (kt), compared to 771 kt in 2021 (Updated Baseline). The increase is mainly due to increasingly longer land-clearing hauling distances.

Of this total, our direct GHG emissions (category 1) were 614 kt, and our indirect GHG emissions (category 2) associated with electricity use were 226 kt or approximately, representing 26% of our total emissions (category 1 and 2).

**We calculate the carbon
footprint of our
activities according to
the Greenhouse Gas
Protocol.**
