

SUSTAINABILITY **REPORT**

2024

Foreword

→ It is a privilege to present the 2024 Sustainability Report of Compañía Minera Antamina S.A. This publication reaffirms our commitment to a modern, responsible, and sustainable approach to mining—an activity we view as a true engine of development for Peru and, especially, for the Ancash region. The report provides a transparent overview of our performance across economic, social, environmental, and governance dimensions, while also reflecting the progress we have made and the challenges we have faced over the past year.

2024 was a year of major milestones and achievements. One of the most significant was the approval of the Modification of the Environmental Impact Assessment (MEIA)—a rigorous and participatory process that included extensive technical evaluations and open dialogue with communities, authorities, and experts. This approval not only extends the life of our operations to 2036, but also validates the strength of our environmental and social management systems and reaffirms the confidence of the Peruvian State in our capacity to operate with transparency and responsibility. It is both a recognition of our efforts and a renewed commitment to continue raising the standards of environmental protection, safety, and community engagement that define Antamina.

Operationally, we delivered strong results. We exceeded our production targets, achieving 429 thousand tonnes of copper, 273 thousand tonnes of zinc, 8 thousand tonnes of molybdenum, and 1.3 million ounces of silver, among other outputs. These results were made

possible through innovation, teamwork, and a disciplined focus on efficiency—despite the technical and mineralogical challenges of the year. With this performance, Antamina contributed approximately 2.9% of Peru’s GDP (Gross domestic product) and 43% of Ancash’s GDP, consolidating our position as a key driver of both national and regional economic growth.

The safety and well-being of our people remain at the heart of everything we do. The challenges of 2024 strengthened our determination to achieve our Zero-Accident Goal and to continue reinforcing a preventive culture. We dedicated more than 115,000 hours of training for employees and contractors, building a skilled, motivated, and safety-conscious workforce guided by our core values of integrity, innovation, and excellence.

During the year, we invested US\$691 million, representing a 10% increase over 2023, to ensure the continuity and long-term sustainability of our operations. Key projects included new phases of the Tailings Dam, the acquisition of main and auxiliary mining equipment, and the construction of the W1 Ore Primary Crusher. Since the start of our operations, our cumulative investments have exceeded US\$6.9 billion, positioning Antamina among the leading mining investors in Peru.

Beyond production, our contribution extends to Peru’s development and to the well-being of the communities in our area of influence. In 2024, we fulfilled our fiscal commitments responsibly, contributing more than US\$960 million (S/ 3,613.44 million) in taxes, royalties,

and specific payments—resources that strengthen public finances and support development across the country.

Social and territorial development remain pillars of our management approach. We strengthened our presence across 20 communities within our Area of Operational Influence, located in six provinces in Ancash and Lima, through initiatives in health, education, infrastructure, and local economic development.

One of the most effective tools in this effort has been the Works for Taxes (OxI) mechanism, which has enabled us to accelerate public investment and close critical infrastructure gaps. Since its implementation, we have committed nearly S/2 billion to public projects that have directly improved the quality of life of more than one million people. In 2024, we executed transformative projects in health, education, transport, and sanitation—including the modernization of hospitals and health centers in Ancash, the construction of new schools in rural districts, and the development of potable water and sewage systems that benefit entire communities. These initiatives reflect our long-term vision of shared progress, working in coordination with all levels of government.

Through these efforts, we continue to foster inclusion, strengthen local capabilities, and create lasting conditions for sustainable territorial development. We also maintain an open and transparent dialogue with communities—building trust, promoting collaboration, and developing joint solutions to the challenges we share.

This report embodies our conviction that the mining of the future must combine productivity with responsibility, economic growth with social inclusion, and innovation with environmental stewardship. Every achievement we present here is the outcome of collective effort—the dedication of our people, the trust of our partners, and the constructive dialogue we maintain with the communities and authorities in our area of influence.

We hope this report serves as a valuable reference for all our stakeholders, offering a clear understanding of our management and our path forward. At Antamina, we remain committed to contributing to Peru’s development, protecting the environment, enhancing community well-being, and consolidating a world-class, responsible, and sustainable mining operation.

CHAPTER 01

About Antamina

1.1

Who we are

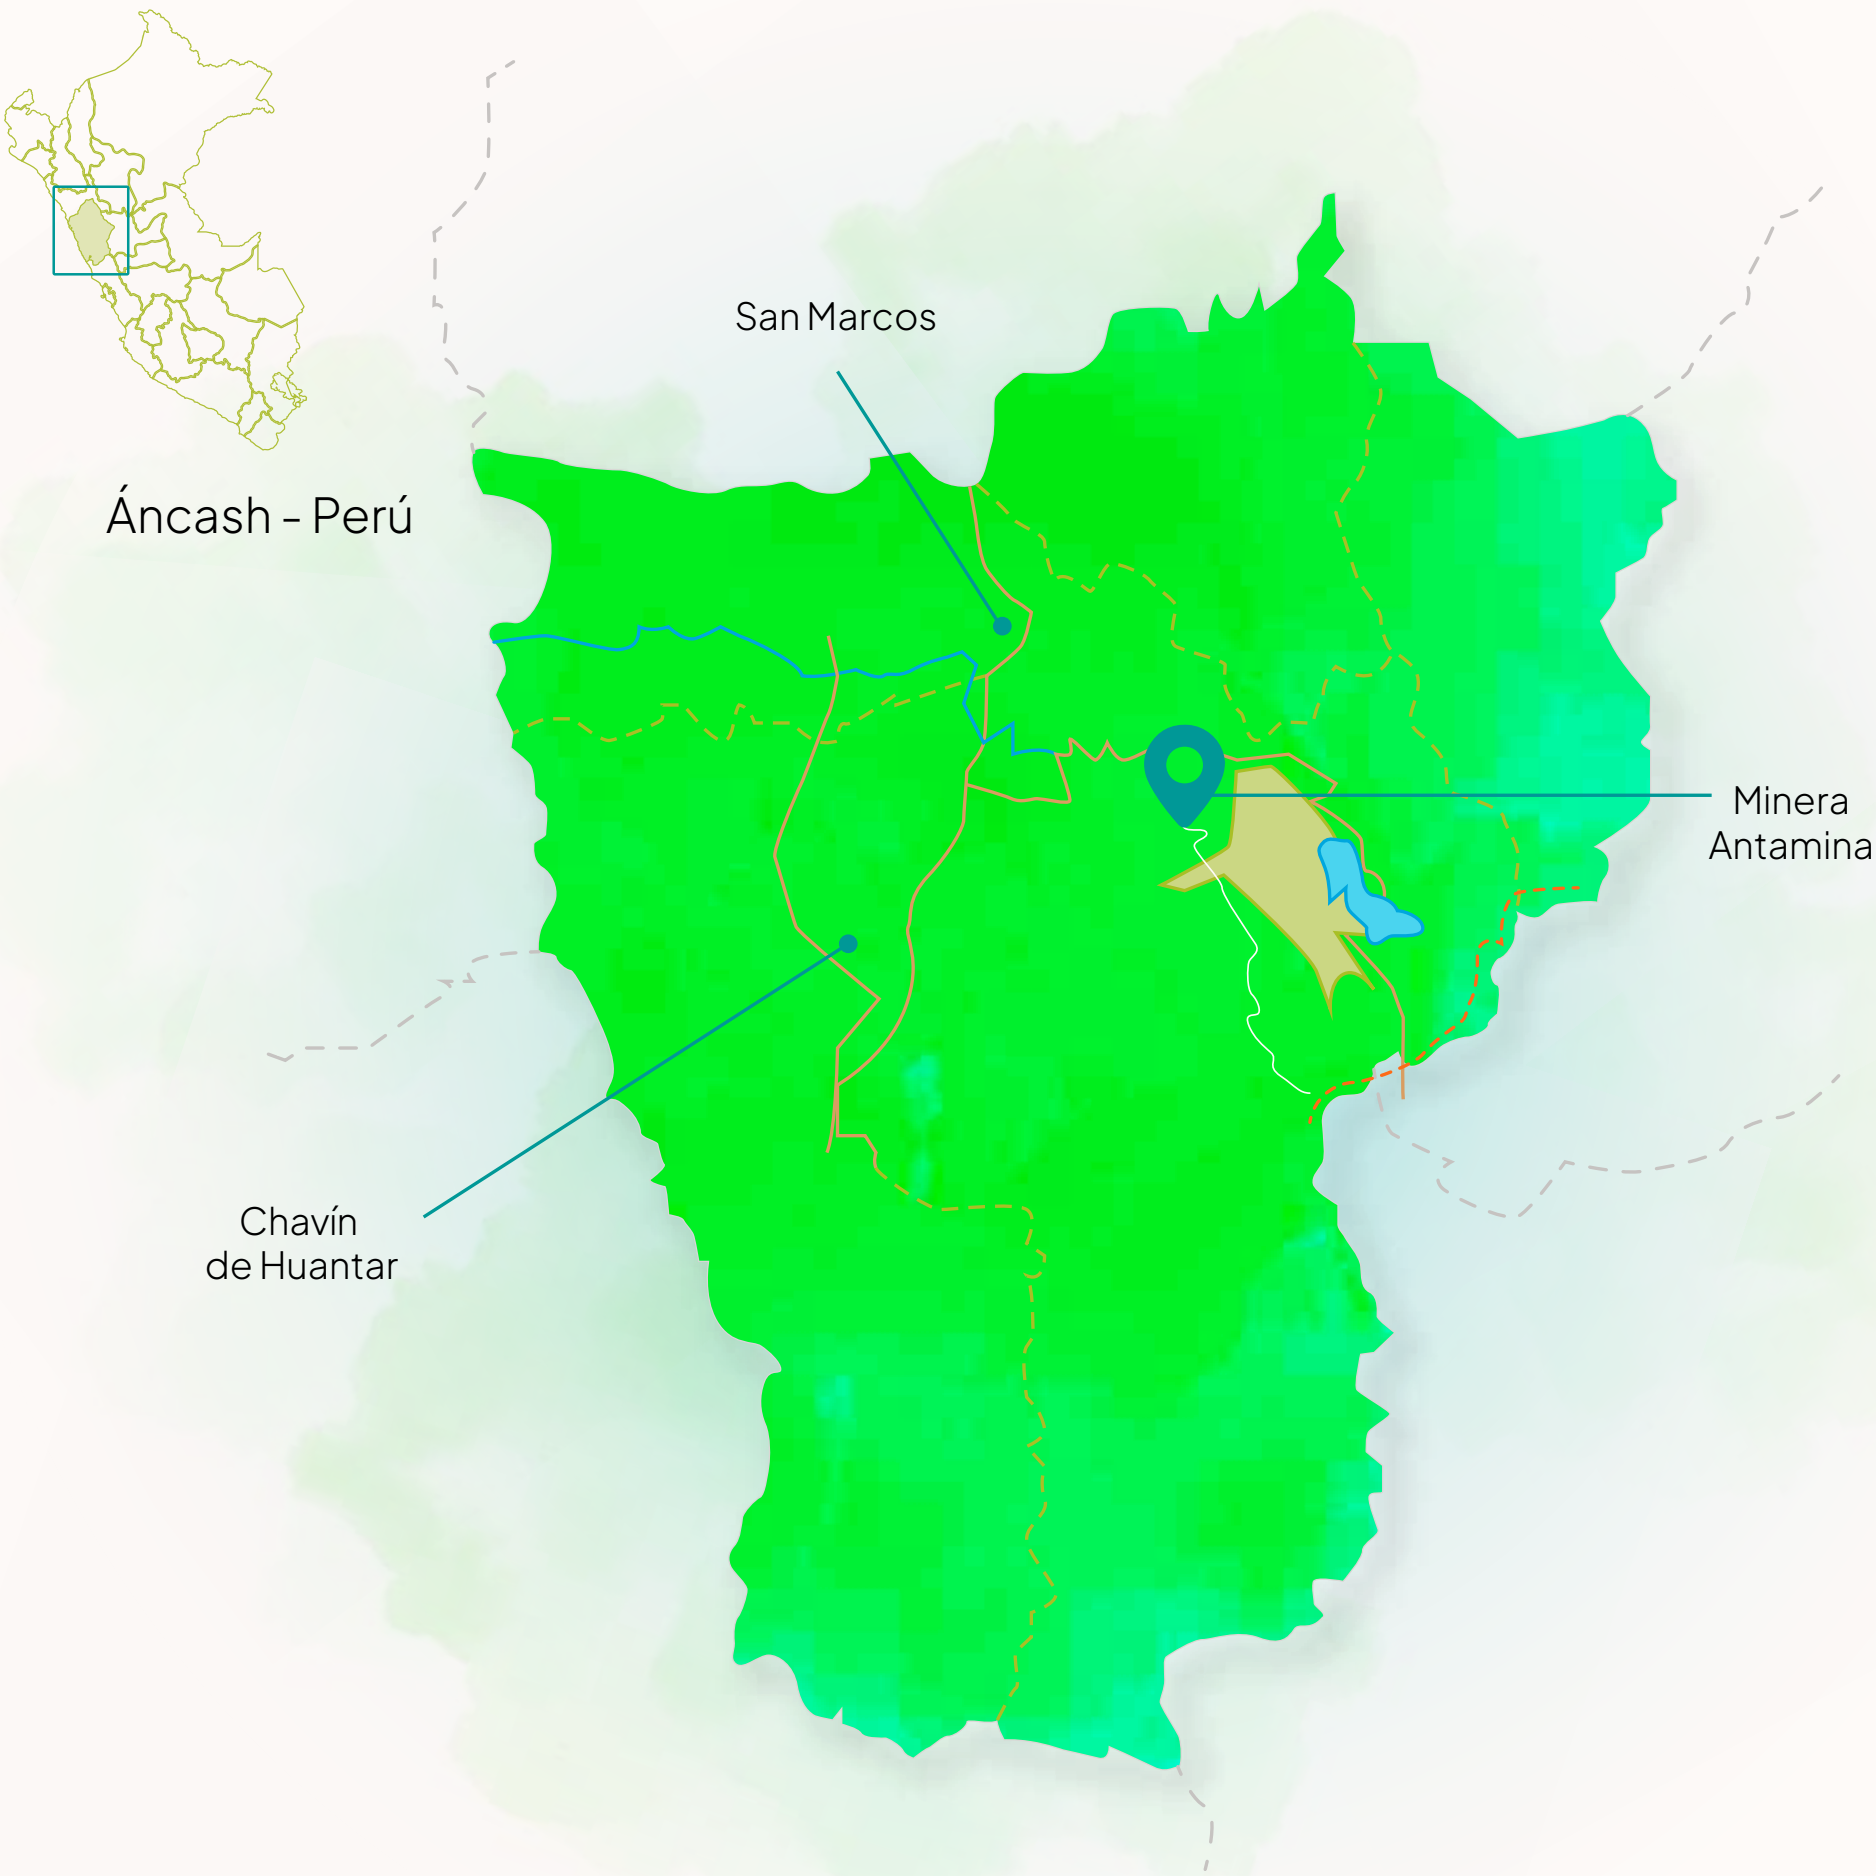

GRI 2-1

→ We are a mining company specializing in the extraction of non-ferrous metalliferous minerals such as copper, zinc, molybdenum, silver and lead. We carry out the extraction of these minerals with advanced technology and strict environmental and safety standards, which contributes to the local economy and the sustainable development of the country.

As part of the Ancash community, we take pride in contributing to the region's positive impact and reafirm our commitment to its growth and well-being.

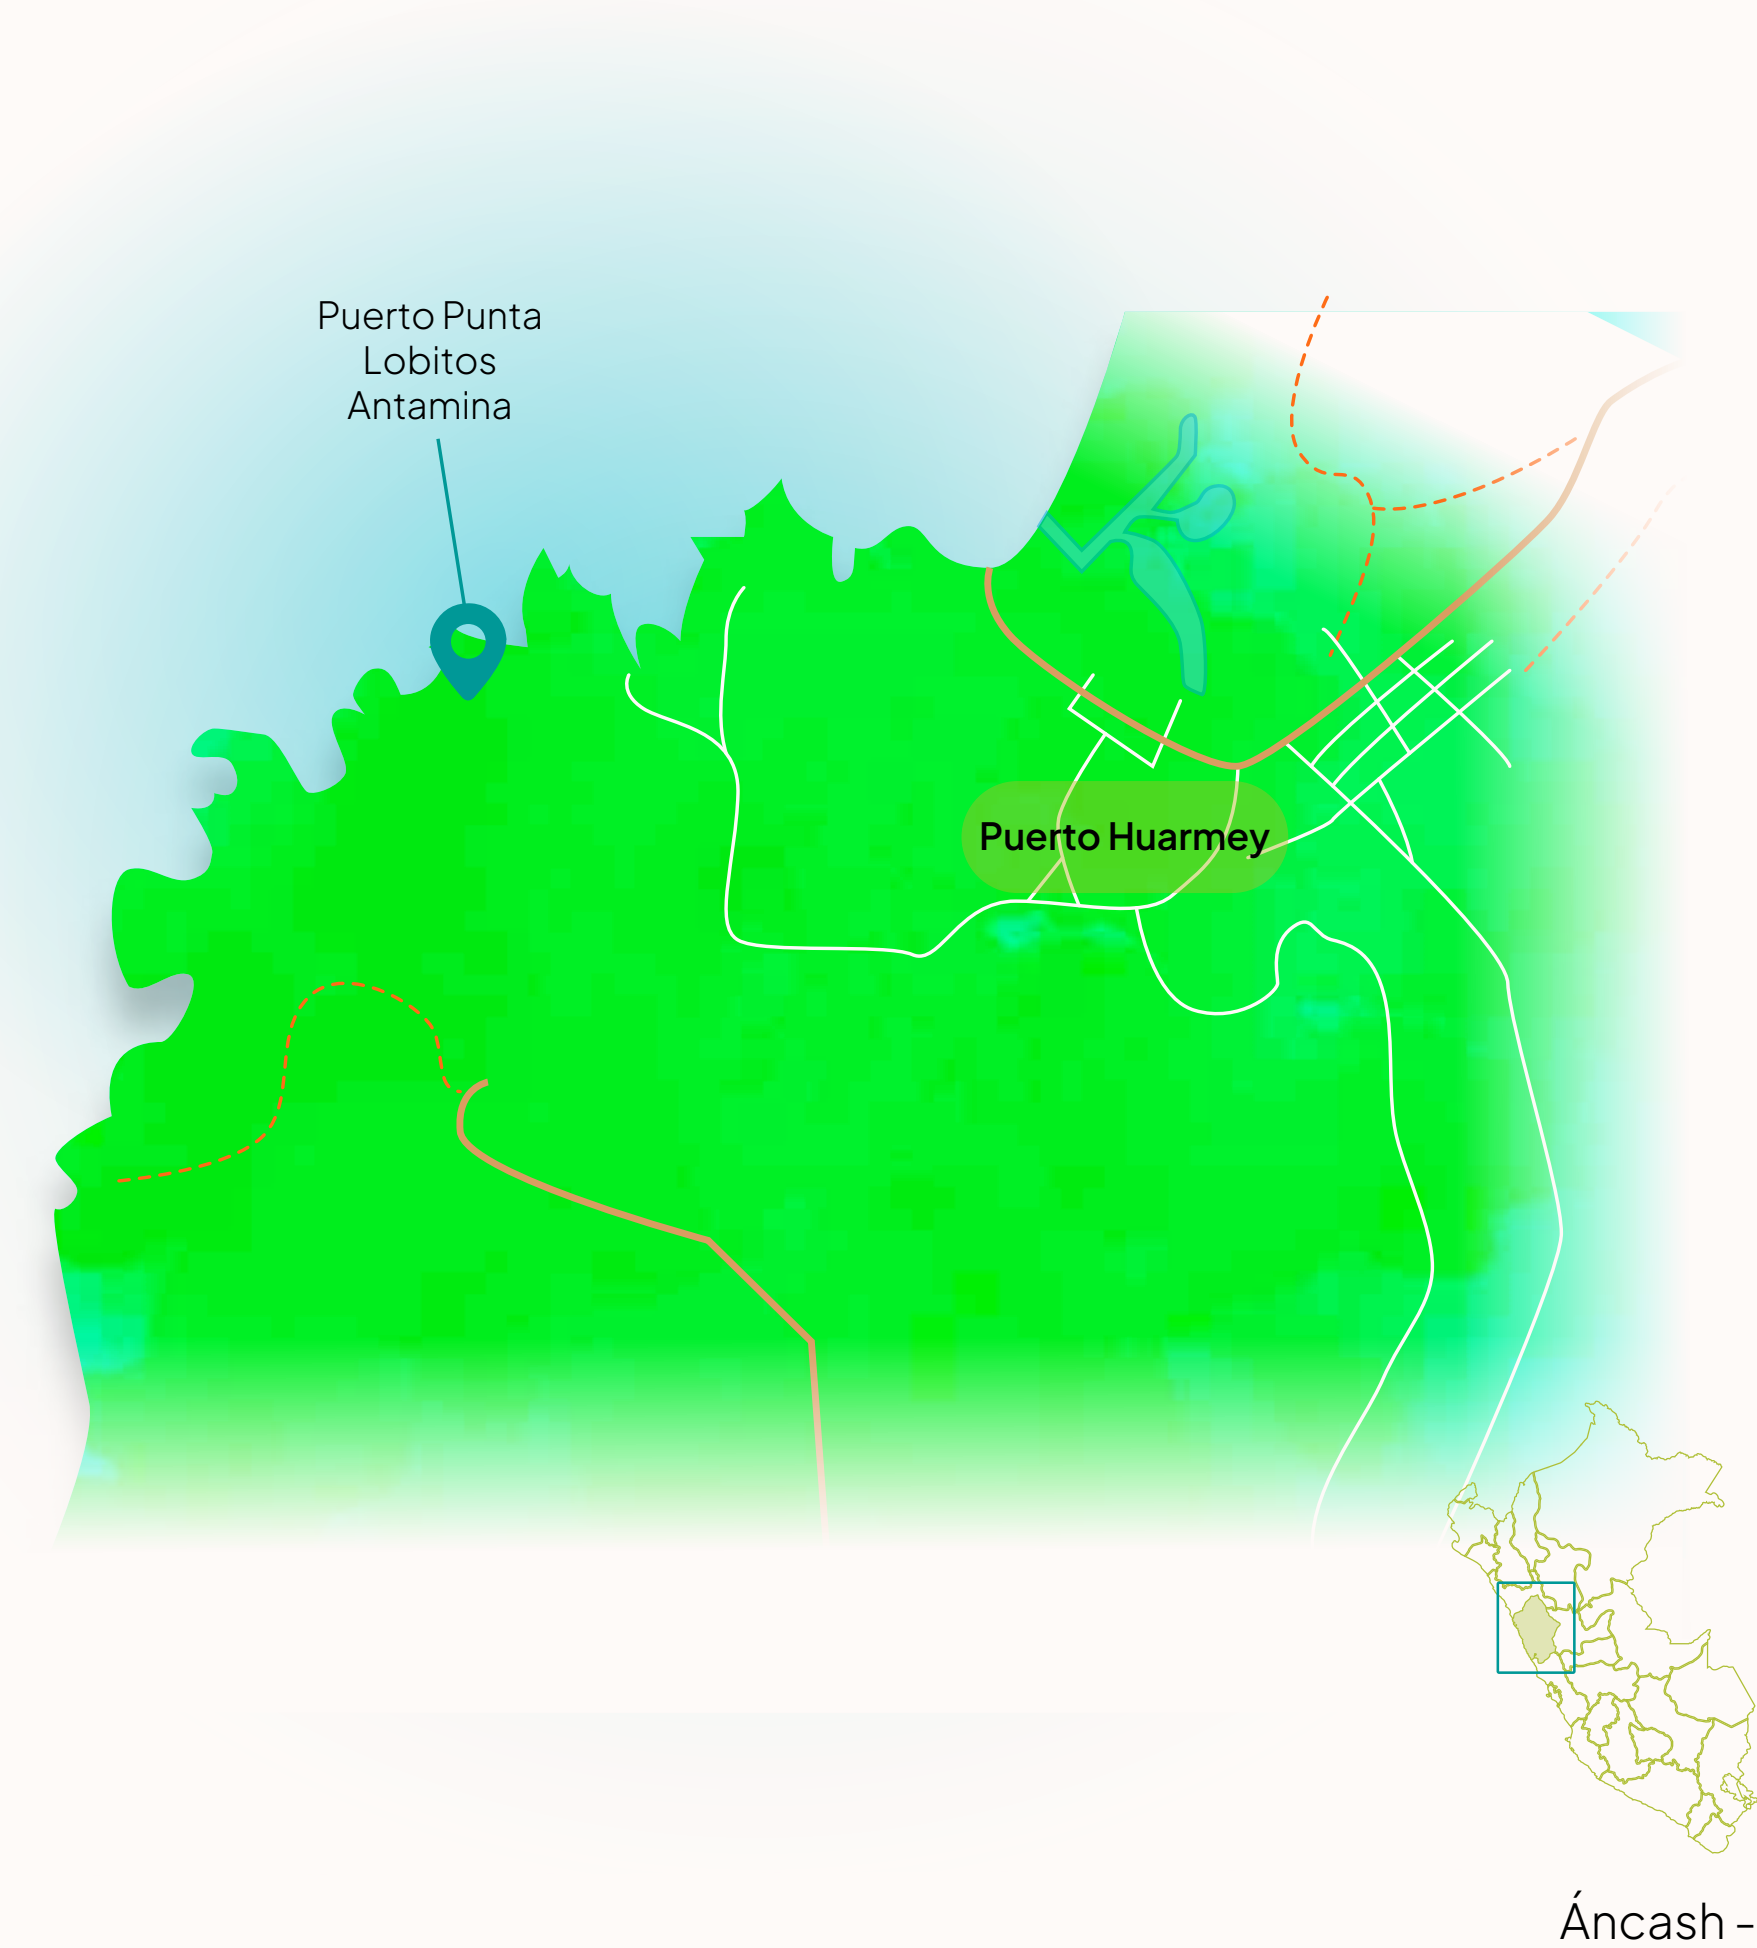

Our operation takes place at the Yanacancha Complex, located in the district of San Marcos, Huari province, Ancash region, at an average altitude of 4,300 meters above sea level and about 200 kilometers from the city of Huaraz.

Yanacancha location

In addition, we operate the Punta Lobitos Port, located in the coastal province of Huarney, from which we ship copper and zinc concentrates to various international destinations.

Punta Lobitos Port location

Territorial Management Units

Territorial Management Unit	Province	District
San Marcos Mine	Huari – Áncash	San Marcos Chavín de Huántar Huachis San Pedro de Chana
Huallanca	Bolognesi	Huallanca Aquia Chiquián
Valle Fortaleza	Bolognesi	Cajacay Antonio Raimondi Colquioc Huayllacayán

OUR VISION AND MISSION

We operate with a shared vision: creating value responsibly and sustainably. Our decisions are focused on generating real benefits for our collaborators, partners, neighboring communities, and the development of Peru.

Vision
We achieve positive and predictable results in health and safety, environmental stewardship, community relations, quality, and efficiency—driven by the commitment, participation, and leadership of our people.

Mission
A Peruvian example of mining excellence on the global stage, led by extraordinary leaders who turn challenges into successes. Working today for the development of tomorrow!

OUR VALUES

Occupational Health and Safety

We integrate occupational health and safety into all our actions and decisions, proactively safeguarding people and property.

Integrity

We are our word, honor our commitments, and comply with laws and corporate policies.

Responsibility

We are responsible for our actions and their consequences, and for the efficient management of resources, operating with social and environmental responsibility, promoting sustainable development.

Respect and recognition

We recognize each other's accomplishments, respect traditions, and promote a culture where ideas and contributions are valued.

Continuous learning

We promote a culture of learning and continuous improvement for our team, strategic partners, customers and industry, optimizing processes and the use of technology.

Excellent performance and innovation

We create an appropriate environment where innovative ideas and methods emerge to improve our processes.

OUR CERTIFICATIONS

Our systems hold certifications that ensure process efficiency and guarantee the safety and well-being of everyone involved in our operations. We are committed to rigorously adhering to international standards, strengthening our position as a leading mining company in the industry.

ISO 37001:2016 Standard contributes to the prevention of bribery and thus promotes full and transparent activities in organizations.

The ISO 9001 Standard makes it possible to maintain international standards for Quality Management Systems.

The ISO 14001 Standard guarantees proper environmental compliance throughout our entire operation.

ISO 27001 certification helps strengthen information protection practices within organizations.

The ISO 45001:2018 Standard establishes the framework for the Occupational Health and Safety Management System.

KEY AFFILIATIONS WITH INDUSTRY ORGANIZATIONS

Organization	Description of the organization	Antamina's role
	A business organization established as a non-profit Civil Association. Its objective is to promote investment while ensuring competitiveness and the sustainable use of natural resources. SNMPE operates through various technical, commercial, legal, and support committees. It also publishes analyses and statistics, and organizes events.	Participation in meetings and active membership in various committees.
	International non-profit association, which brings together the world's leading copper producers and manufacturers. Its purpose is to direct, coordinate and optimize efforts in the development of markets, technological research, promotion and defense of end-use products manufactured with copper.	Members of the Board of Directors
	A non-profit organization representing the global zinc industry to sustainably grow markets and maintain industry market access through effectively managed initiatives in research and development (R&D), technology transfer, and zinc value communication.	Leading Position
	It is an international, non-profit association that brings together the world's leading producers, marketers, and processors of molybdenum. Its purpose is to promote the responsible and sustainable use of molybdenum through research, the dissemination of technical and scientific information, and by representing the industry before authorities, consumers, and society at large.	Member
	An organization made up of entrepreneurs and owners of small, medium, and large businesses, established to boost productivity and to promote, strengthen, and implement initiatives for the development of the region's business sector.	Participation in meetings and work sessions.
	A non-profit organization dedicated to building strong relationships to promote trade and investment between Australia and Peru.	Participation in events and work sessions.
	A dynamic, non-profit institution whose goal is to serve as a reliable and knowledgeable partner in promoting and developing close commercial, educational, and cultural ties between Canada and Peru.	Leading Position
	It is a non-profit organization dedicated to strengthening and promoting trade, investment, and cooperation between Peru and Chile. The Chamber facilitates business opportunities and creates spaces for entrepreneurial integration and collaboration.	Participation in events and work sessions
	This is a trade organization that brings together leading exporting, importing, and service-providing companies from various economic sectors. Its goal is to contribute to public policy development based on the defense of principles rather than particular interests, with the purpose of fostering employment generation, opportunity creation, and a better quality of life for citizens.	Member
	An association that promotes best practices in human resource management to develop and enhance people's talents and add value to the business community.	Human Resources VP

Corporate Governance

GRI 2-9, GRI 2-10, GRI 2-11

➔ At Antamina, we regard governance as an essential pillar for ensuring responsible, efficient management that is aligned with the interests of our shareholders and stakeholders. Our Board of Directors has the authority and responsibility to govern the company by setting its strategic direction, overseeing executive management, ensuring adequate controls are in place, and promoting a balance between short- and long-term objectives.

SHAREHOLDERS

Our shareholding structure is composed of:

BHP
33.75%

GLENCORE
33.75%

Teck
22.5%

MITSUBISHI
10%

OUR BOARD OF DIRECTORS AND COMMITTEES

GRI 2-12, GRI 2-13, GRI 2-16, GRI 2-18

Our board is composed of 9 sitting directors, each representing our shareholders:

3 members appointed by **GLENCORE**
Glencore

3 members appointed by **BHP**
BHP

2 members appointed by **Teck**
Teck

A member appointed by **MITSUBISHI**
Mitsubishi

The Board sets the company’s strategic direction, ensuring a management framework that balances sustainable growth with adherence to the highest ethical, social, environmental, safety, and regulatory standards.

The Board is responsible for Antamina’s overall governance, while Management oversees daily operations and ensures compliance with the objectives defined by the Board. With delegated and formalized authority, Management leads the execution of strategy, business plans, and key initiatives, adapting its approach in line with the organization’s performance, risks, and capabilities. In turn, the Board and its committees provide guidance and monitor compliance with strategic directives.

The Board meets in person at least four times a year. In addition, directors may also participate virtually when needed.

The Board and its committees provide guidance and monitor compliance with strategic directives.

Among its main responsibilities are:

- 1

Definition of corporate strategy and guidelines:

We establish corporate policies, strategic objectives, parameters, budgets, and annual plans that guide Management’s actions and set the organization’s direction.
- 2

Guidance for key investments and projects:

We approve and oversee the long-term capital expenditure plan, including expansion projects or significant upgrades at the mine, concentrator, or tailings facility, ensuring alignment with the overall strategy.
- 3

Financial controls and policies:

We ensure the transparency and integrity of financial reporting and oversee all relevant accounting, audit, and tax matters.
- 4

Risk management:

We define and monitor risk policies, frameworks, and controls, covering safety, environmental protection, regulatory compliance, social responsibility, and ethical standards. We actively monitor strategic and operational risks.
- 5

Performance monitoring:

We set clear performance expectations and rigorously track projects, operations, and management results.

- 6

Stakeholder relationships:

We oversee relations with key stakeholders, ensuring good practices in environmental, social, and community relations.
- 7

Talent management and labor relations:

We promote a strong leadership team, and oversee succession planning, career development, human resources policies, collective bargaining, and benefits programs.
- 8

Shareholder management:

We facilitate meaningful shareholder engagement on key issues, integrate their expectations into our strategy, and oversee institutional, technical, and operational relationships with their respective companies.
- 9

Board self-governance:

We manage our committees, conduct periodic self-assessments, and promote the continuous improvement of the governance system, with the ability to delegate these functions to committees or working groups as appropriate.

Board of Directors

Shareholder	Principal director
Glencore	Abraham Chahuan (President) Michael Farrelly Troy Wilson Jon Evans
BHP	Carlos Avila Lauren Arias Laila Ellis
Teck	Shehzad Bharmal Luis Carlos Rodrigo
 MITSUBISHI	Masashi Sekiguchi
Secretary of the Board of Directors	Antonio Pinilla Legal and Compliance VP (Board Secretary)

The position of Chair of the Board of Directors rotates annually among the three majority shareholders. Each Board member has extensive experience in mining-sector companies and in areas relevant to Antamina. None of the members are independent, and none belong to Antamina’s executive team.

The Board currently maintains six standing committees that play a key role in strengthening corporate governance. These committees meet regularly to advise and support the Board on matters within their respective areas of responsibility, providing specialized analysis and promoting informed decision-making.

Each committee operates under a defined mandate that sets out its specific purpose, role, responsibilities, and scope. This ensures that key topics—including strategy, finance, talent, community relations, environment, and safety—receive the necessary attention and oversight through the delegation of Board functions.

Beyond their technical role, the committees also serve as spaces for dialogue and reflection that require the commitment and active participation of their members. Their work enables Antamina to address challenges and opportunities in an integrated and strategic manner.

1. 3

Corporate Compliance

→ We act responsibly in every action and its consequences, aligned with a clear framework of Responsible Business Conduct. We have a robust and constantly evolving Compliance Program designed to prevent risks of corruption and other compliance-related offenses.

This program is reviewed annually to adapt to changes in the environment and to address emerging risks. In line with our commitment to continuous improvement, we operate under the ISO 37001 Anti-Bribery Management System certification, which attests to the strength of our processes and internal controls.

In 2024, we continue to strengthen our culture of integrity, building transparent and sustainable relationships

with our stakeholders. Through clear policies, effective controls, and ongoing training, we ensure that our business relationships uphold high ethical standards. We have developed internal applications to improve the management and oversight of gift-giving, hospitality, donations, and the reporting of conflicts of interest, thereby enhancing the efficiency of these controls.

Our Code of Conduct sets clear expectations for behavior in key areas such as anti-bribery, conflicts of interest, and human rights, and applies to all our employees, strategic partners, and other stakeholders. In addition, we maintain a set of policies and procedures that further expand on the guidelines established in the Code of Conduct.

Click here
to view the
**Code of
Conduct**

Our main policies and procedures in this area are as follows:

Policies and Procedures of the Compliance Program

Policies, procedures and standards	Scope	Purpose	Approval Date
Code of Conduct	Apply to all Antamina employees, directors and officers.	Establish standards of conduct for Antamina employees and third parties with whom the company engages.	8/31/2021
Anti-Bribery Policy	Apply to all employees and strategic partners.	Establish general guidelines for preventing acts of bribery and corruption, in compliance with Peruvian and international anti-corruption laws.	2/20/2019
Corporate Compliance and Prevention Standards	Apply to all employees.	Establish the general guidelines that make up the Antamina Corporate Compliance Program (Prevention Model), as well as the guidelines for preventing acts related to the offenses established in Law 30424 and its Regulations.	12/18/2023
Due Diligence Standards	Apply to all employees and strategic partners.	Establish the general guidelines for due diligence activities related to employees, relationships with business partners, and transactions carried out by Antamina.	5/27/2024
Conflict of Interest Standards	Apply to all employees.	Establish general guidelines that Antamina employees must follow to avoid conflicts of interest.	8/16/2019
Ethics Committee Standards	Apply to all employees and strategic partners.	Define the governance guidelines of the Antamina Ethics Committee.	12/18/2023
Procedure for the Receipt and Delivery of Gifts and Hospitality	Apply to all employees.	Establishes the procedure that Antamina employees must follow regarding the receipt and delivery of gifts, hospitality, and donations, with the aim of preventing acts related to bribery, corruption, or other related offenses.	12/21/2024
Procedure for the Handling and Investigation of Complaints	Apply to all employees	Establishes the procedure for reporting complaints, as well as the actions and responsibilities for receiving, evaluating, analyzing, and investigating complaints submitted to Antamina concerning violations of the Code of Conduct, Anti-Bribery Policy, and other policies that are part of the Corporate Compliance Program.	10/26/2024

(*) Policies and procedures are reviewed annually to ensure they remain up to date.

We maintain a zero-tolerance policy toward bribery and corruption. In the event of any conduct that violates these principles, we will implement corrective measures, which may include disciplinary action, termination of contractual relationships, and strengthened efforts in training, awareness, and the communication of our ethical standards.

**TRAINING AND
CULTURE OF INTEGRITY**

We conduct annual training sessions for our employees and suppliers to raise awareness and promote a clear understanding of our policies and practices. These sessions encourage active consultation and allow participants to contact the Compliance area at any time for guidance on the proper application of our guidelines.

In 2024, we achieved the following results:

We complement this training with internal communication campaigns that reinforce our policies and promote a culture of integrity at all levels. Key initiatives in 2024 included:

- **Corporate Compliance Week:** We hosted in-person and virtual activities in Lima and Yanacancha, engaging more than 700 participants in addressing everyday ethical dilemmas.
- **Compliance Ambassador Program:** For the second consecutive year, we implemented this initiative to strengthen connections between the Compliance team, different areas of the company, and our strategic partners, further consolidating Antamina’s ethical culture.
- **Training Program:** We achieved 100% training coverage for staff and 85% for operational personnel on ethics and integrity topics, reaffirming our commitment to an organizational culture grounded in solid principles and best practices.

ETHICS LINE: A RELIABLE AND TRANSPARENT CHANNEL

We operate an ethics line, managed by an independent third party, that enables the reporting of violations of the Code of Conduct or any corporate compliance policy. In 2024, we strengthened its promotion through our internal and external channels, encouraging its use by ensuring confidentiality and protection against retaliation.

In 2024, the Ethics Line received 157 reports.

In addition, annually, we collect Conflict of Interest Declarations from employees in higher-exposure roles. In 2024, we gathered 346 declarations, which were reviewed and accompanied by specific recommendations for their management.

CHAPTER 02

Our Operation

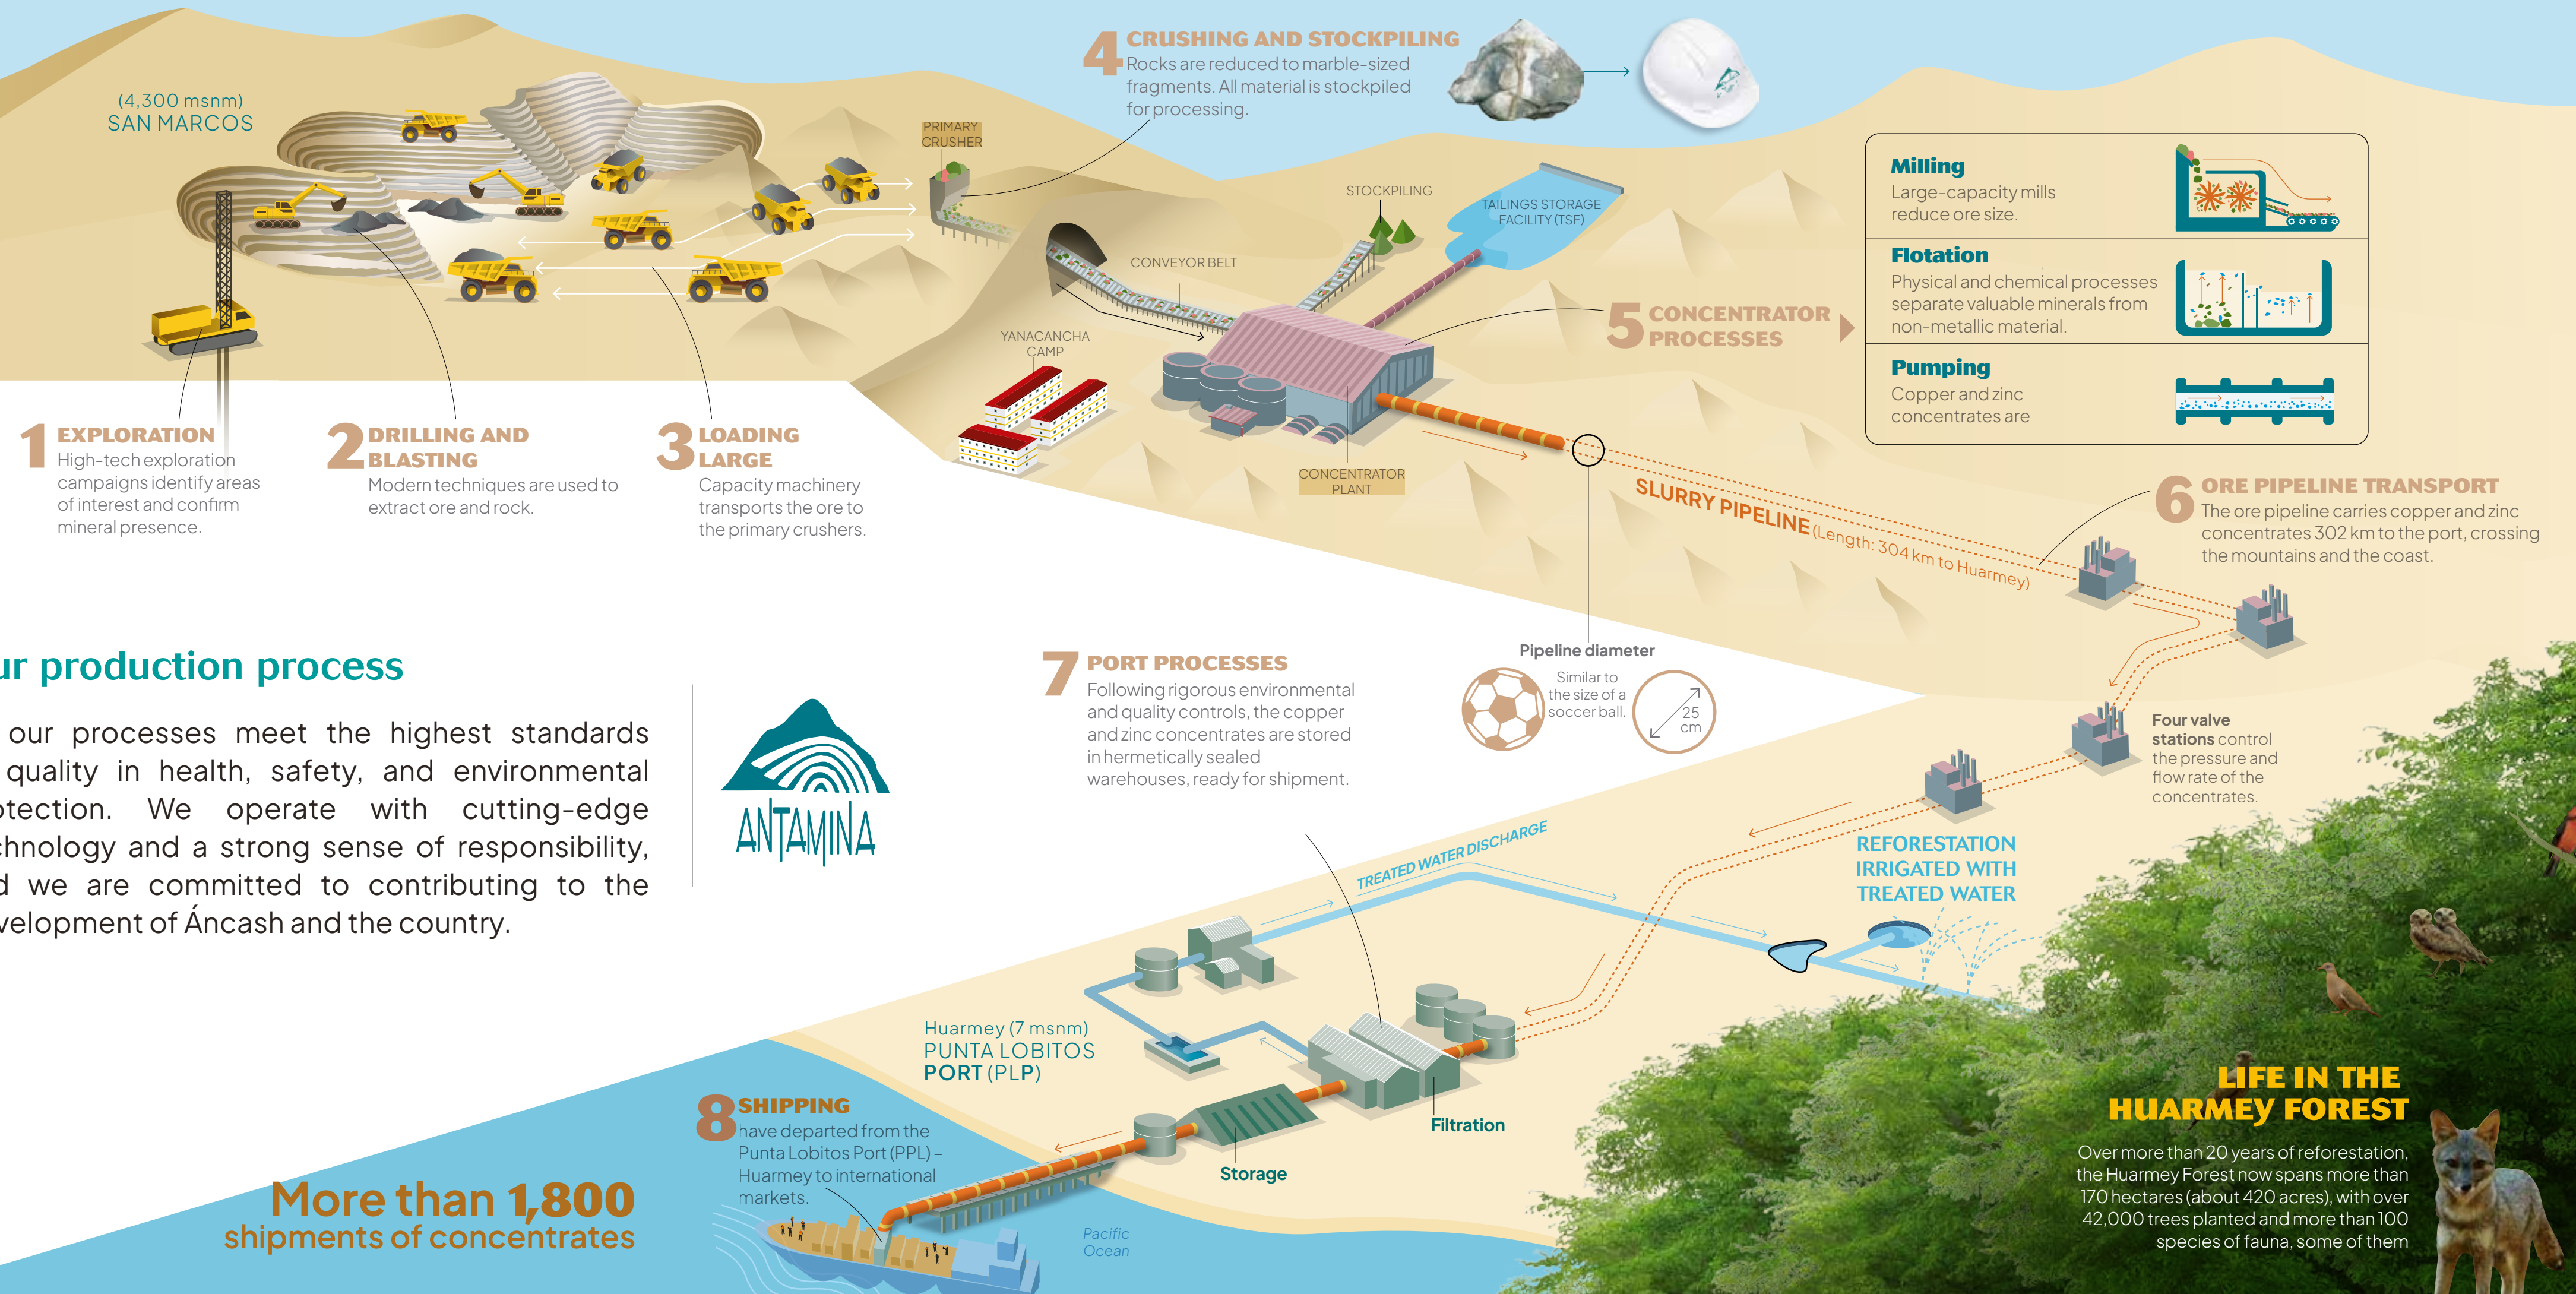

We recognize that operational efficiency and innovation in our production processes are the driving forces behind value creation within the organization. Our production management focuses on optimizing resources, ensuring safety and quality at every stage, and incorporating technologies that guarantee the continuity and sustainability of our operations. With a strategic approach, we aim to maintain high performance standards, build trust among our stakeholders, and strengthen our competitive advantage in a dynamic and challenging environment.

2.1

Production Process

GRI 2-6

→ Our products are extracted through a process consisting of 8 stages, detailed below

2.2

Production Results

→ We continuously optimize processes to ensure sustained production, promote a culture of preventive safety, reduce environmental impact, and maintain a focus on cost reduction.

Concentrate Production in 2024

Concentrate Production in 2024				
Product	Actual	Budget	Difference	Variance (%)
Copper Concentrate, Kt (dry)	1.540	1.481	59	4%
Zinc Concentrate, Kt (dry)	528	492	36	7%
Molybdenum Concentrate, Kt (dry)	17	14	3	19%
Pb_Bi Concentrate, Kt (dry)	2	2	0	7%

METAL PRODUCTION

Overall copper recovery exceeded budget by +1.5%, zinc recovery by +1.2%, silver recovery by +2.6%, and molybdenum recovery by +1.8%, despite processing M1, M4B, and M2A ore from Phase 8, and M4B ore from Phase 9 (last quarter of 2024), which presented complex mineralogical characteristics, including the presence of clays, high acidity, elevated iron content, transitional minerals, oxides, and competent

ore. We implemented ore blending strategies, conducted metallurgical evaluations, and introduced operational improvements, resulting in enhanced conditions in the production process.

In 2024, metal production surpassed budget targets for copper (+15.5 Kt), zinc (+24.2 Kt), silver (+1.3 Moz), molybdenum (+1.37 Kt), and lead (+0.06 Kt).

Metal Production in 2024

Metal production in 2024				
Product	Actual	Budget	Difference	Variance (%)
Metallic copper, Kt (dry)	429	413	16	4%
Metallic Silver, Kt (dry)	0.35	0.31	0.4	13%
Metallic zinc, Kt (dry)	273	249	24	10%
Metallic Molybdenum, Kt (dry)	8	7	1	20%
Metallic lead, Kt (dry)	1	1	0	7%

PROCESSED ORE

This year, we exceeded the target of ground tonnage by 0.17 Mt compared to the Budget (+0.3%) due to the grinding efficiency in M4B and M1 minerals, the effect of the implementation of Antamina+ initiatives, as well as the effects of the Machine learning project, timetable optimization in maintenance of mills and pumps; likewise, the scheduled stop of Sag 02 mills was not executed, this challenge was overcome despite having had unscheduled events in the operation of the mills. The average annual ground tonnage was 151.0 Ktpd with the target being 150.5 Ktpd.

Mineral Production in 2024

Producción de concentrados 2024				
Product	Real	Budget	Difference	Variance (%)
Total Tons Ex-pit Kt (dry)	240.304	258.411	(18.107)	-7%
Total Tons Moved Kt (dry)	274.947	298.187	(23.240)	-8%
Total Tons Milled Kt (dry)	55.266	55.096	170	0%
Copper Equivalent Kt (dry)	558.586	530.916	27.670	5%

Mining Investments 2024

In 2024, we made mining investments for a total of US\$691 million, representing an increase of 10% over the previous year. These investments were focused on strengthening and ensuring the continuity of our operations, highlighting the following key projects:

- Execution of phases VII and VIII and start of phase IX of the Tailings Dam.
- Acquisition of main and auxiliary mining equipment.
- Construction of the new primary crusher W1 Ore.
- Strengthening of the mills by replacing critical components.

This positioned us among the mining companies with the highest volume of investment at the national level. To date, our accumulated mining investments since the start of operations amount to US\$6.9 billion, without considering the initial investment.

2.3

Innovation and Implementation of New Technologies

→ In 2024, we advanced the consolidation of the Es+ Lean program and the execution of Antamina+ projects aimed at increasing milling throughput and improving metal recovery, overcoming challenges in the production of copper, zinc, and silver. Action plans and commitments were also implemented to optimize molybdenum recovery and production.

ANTAMINA+

This program centralizes the organization's continuous improvement initiatives, providing oversight and governance to ensure that all ongoing projects remain aligned, impacting those related to safety, health, and environmental management, while also generating OPEX and CAPEX savings and productivity gains.

In 2024, we executed **71 initiatives**, of which **12 were related** to Safety and the Environment.

Key achievements of our management included:

OPEX savings:

us\$ 96.7M

CAPEX savings:

us\$ 28.1M

Plant productivity impact:

us\$ 46.8M

Intro

01

02

Our Operation

03

04

05

A

<

>

Due to the ex-pit context, it is recommended that this productivity impact not be disclosed externally. Highlighted initiatives implemented in 2024 included:

- Deployment of an inspection robot to assess wear on ball joints and steering pins in KOM 930E/980 trucks.
- Remote-controlled thickness measurement system in thickeners.
- Pilot testing of a robotic arm for drill bit replacement.
- Dosing of Mathdisper-50 dispersant during the separation cleaning stage.
- Cycloning of bulk concentrate feeding the Cu-Mo separation circuit.
- Extending the service life of the 650 – Vulco pump.
- Increasing production during the final hour of the shift – Stage 2.
- Extension of temporary ramps in F9 SW.

We also began deploying Leantools in the Concentrator Maintenance area and at Punta Lobitos Port, completing the implementation of the methodology across all three operational departments of the VPO. In parallel, we reinforced our organizational culture, with Safety upheld as a fundamental operating principle.

In mining technology, we commissioned a new Dispatch Control Room at the camp, overseeing Dispatch Control, Dispatch Maintenance, and Primary Crusher operations. We also upgraded the Dispatch and Provision systems; a process carried out in close coordination with the Modular and Telecommunications teams to minimize operational impact.

We develop various initiatives focused on improving safety and productivity, reducing the exposure of our employees to high-risk activities and optimizing operating times. Among the most outstanding implementations are:

- Truck grade measurement system and automated truck diversion.
- Testing of a 3D LIDAR -based anti-collision system for tractors and shovels.
- Optimization of crusher pocket cleaning by displaying the dump pocket on a wireless device.
- Deployment of two Rockspreader units to improve road ballasting.
- Installation of cameras for fragmentation measurement using the Fragtrack system.
- Study of operational factors to ensure MEIA compliance.
- Development of the Nucleus situational awareness business case, applied to the value chain to minimize process deviations.

STRATEGIC ALLIANCES DRIVING INNOVATION

In 2024, we strengthened key partnerships that reinforce our innovation culture, including:

Global Mining Guidelines Group – Joined this global community to exchange knowledge and innovative practices applicable to mining.

Mining Innovation Hub of Peru – Member since 2023, participating in collaborative projects to address major challenges in the mining sector.

Perumin Hub – Continued active participation in this open innovation program promoting collaborative solutions for the national mining industry.

2.4

Occupational Safety and Health

GRI 2-27, GRI 403-7, GRI 403-8

→ We prioritize the health and safety of everyone working in our operations, including both our employees and strategic partners. We achieve this through comprehensive training and the implementation of preventive measures to minimize workplace risks and emergencies.

Our commitment is upheld by leadership at all levels and supported by internal regulations, including our standards and procedures. These policies are aligned with current legal regulations for occupational safety and health. They are supported by mechanisms that provide a swift and timely response to any emergency that may arise during our operations.

OUR OCCUPATIONAL HEALTH AND SAFETY MANAGEMENT SYSTEM

We have an Occupational Health and Safety Management System that is certified under ISO 45001:2018. This system covers all processes, activities, and tasks performed by our staff and strategic partners across various locations, including Yanacancha, Mineroducto, Puerto Punta Lobitos, our administrative offices in Lima, and other administrative sites.

Key Actions of Our Health and Safety Governance Framework.

- Annual evaluation of our OHS management system by senior leadership.
- Review, advisement, and compliance assessment by the Joint Committee on Occupational Safety and Health.
- Monthly senior leadership meetings, led by our President, to monitor key performance indicators (KPIs) for OHS compliance.
- A Strategic Partners Committee that promotes continuous improvement through a collaborative approach.

We have various mechanisms in place to communicate relevant information on Occupational Health and Safety (OHS).

In line with the pillars of our Occupational Health and Safety (OHS) management system, every process is verified by line supervisors, senior supervisors, superintendents, and managers. They conduct these checks during field tasks, which allow us to take immediate corrective actions as work is being performed.

Our employees and strategic partners have the right to refuse unsafe work. They can decline any task they consider unsafe until the necessary safety conditions are in place. They can also

report hazards or unsafe conditions through dedicated applications or by communicating directly with their supervisors, all without fear of retaliation.

We utilize a variety of mechanisms to share important OHS information, including:

- Joint Committee on Safety and Health at Work meetings.
- Operational briefings conducted before the start of each workday.
- Training and coaching sessions based on our annual training plan.
- Audiovisual information is displayed at various company locations.
- Email and social media communications.
- Labor Committee meetings between company and union representatives, which also address OHS-related topics.
- The Senior Health, Safety, and Environment (HSE) Committee led by the company's CEO, where OHS performance is reviewed, and improvement actions are decided upon.

HEALTH PROMOTION

Our Occupational Health service is responsible for identifying psychosocial risks, providing mental health support, and conducting medical surveillance, monitoring, and rehabilitation. We operate two fully equipped medical centers staffed with specialized personnel, offering a range of services from outpatient care to advanced emergency treatment.

We also implement various health promotion and prevention programs, including initiatives focused on: Fatigue and Drowsiness, Supplier Occupational Health Management, Healthy Lifestyles and Nutrition, Emotional Wellness, Psychotherapy, Home Ergonomics, Respiratory Rehabilitation and Musculoskeletal Strengthening. Additionally, we conduct vaccination campaigns at our mine sites, as well as in our Lima, PPL, and Huaraz locations.

In 2024, our Lost Time Injury Frequency Rate (LTIFR) was 0.45 per million hours worked, and we recorded 12 lost-time injuries, with 5 involving our employees and 7 involving contractors and one fatality involving an employee.

This unfortunate incident deepened our commitment to safety and prevention at

all levels of the operation. In response, we comprehensively strengthened our controls, protocols, and procedures to ensure that every work area operates under the highest protection standards. We reviewed, adjusted, and reinforced critical operational controls across multiple processes and implemented additional monitoring and supervision mechanisms.

We also launched an intensive program of training, workshops, and specialized courses designed to consolidate a stronger and more conscious preventive culture throughout the organization. Additionally, we created spaces for reflection and dialogue with our employees and contractors to collectively learn from what happened and ensure that each lesson translates into tangible and sustainable improvements.

Through these actions, we reaffirm that safety is our most important value, and that every measure we take aims to protect the life, health, and well-being of everyone who is part of Antamina.

In relation to the prevention of occupational diseases as a result of the company's activities, we implement a systematic process that ranges from the identification and evaluation of processes to detect hazards such as: physical, chemical, biological and ergonomic agents, to the continuous

monitoring of working conditions and review of control measures to ensure their effectiveness and availability.

As a result, we have not recorded any occupational diseases for employees or contractors during 2024, nor have there been any deaths due to this cause.

Occupational Accident Indicators 2022-2024

	2022	2023	2024
Fatal accidents	0	0	1
Lost time injuries	16	10	12
Recordable injuries	29	23	29
Lost Time Injury Frequency Rate (LTIFR)	0.66	0.35	0.45
Man-hours worked	32'461,378	33'400,361	39'433,956

Occupational Disease Indicators 2022-2024

	2022		2023		2024	
	Employees	Contractors	Employees	Contractors	Employees	Contractors
Number of Recordable Fatalities (TRF)	0	0	0	0	1	0
Number of Lost Time Injuries (LTIs)	5	11	3	7	5	7
Total Recordable Injuries (TRI)	9	20	9	14	9	20
No. of lost days	165	167	187	184	6,182	101

Industrial Safety Indicators 2022-2024

	2022		2023		2024	
	Employees	Contractors	Employees	Contractors	Employees	Contractors
Lost Time Injury Frequency Rate (LTIFR)	0.86	0.41	0.45	0.26	0.69	0.22
Recordable In-jury Frequency Rate (RIFR)	1.55	0.75	1.35	0.52	1.25	0.62
Severity Index (SI)	28.47	6.26	28.08	6.88	855.99	3.14
Total Hours Worked	5'795,709	26'665,669	6'660,730	26'739,631	7'222,060	32'211,896

Rates have been calculated for every 1,000,000 hours worked.

**RISK PREVENTION,
AUTOMATION AND
CONTROL**

Our risk management mechanisms for identifying, assessing, and controlling industrial safety hazards include tools such as the IPERC Baseline and Continuous IPERC, which are developed for each process and activity prior to task execution.

We also apply a series of controls designed to reduce risks to reasonable levels and prevent accidents or injuries, implemented according to the following order of priority:

We have an Incident and Non-Conformity Investigation Procedure and carry out our Mechanization Program, aimed at reducing personnel exposure to operational risks by automating critical activities.

In 2024, we strengthened our internal capabilities through a comprehensive Occupational Safety and Health (OSH) training program, aligned with the current regulatory framework for the mining industry. We offered courses for employees and strategic partners on topics such as:

- Hazard Identification, Risk Assessment, and Control (IPERC, in Spanish)

- Fire Prevention and First Aid
- Office Safety and Ergonomics
- Occupational Hygiene
- Incident Reporting and Investigation
- Working at Heights and Hot Work
- Mental Health and Emotional Support

OCCUPATIONAL HEALTH: PHYSICAL AND EMOTIONAL WELLBEING

We provide a comprehensive Occupational Hygiene and Ergonomics service, supported by a specialized Occupational Health team that addresses psychosocial risks, conducts medical surveillance, and supports rehabilitation processes.

Our two on-site medical centers operate 24/7, offering outpatient, inpatient, and emergency care, with services in internal medicine, traumatology, nutrition, psychology, physical therapy, and clinical laboratory testing. We also run health promotion and prevention programs focused on emotional well-being, psychotherapy, nutrition, home ergonomics, and musculoskeletal rehabilitation.

Key achievements of our management:

Strategy for Strengthening the Preventive Culture:
In partnership with the Dupont Sustainable Solutions (dss+) team, we developed a series of activities to assess the maturity of our preventive safety culture.

Occupational Hygiene and Ergonomics:
Our highly trained specialists in Occupational Hygiene and Ergonomics are dedicated to identifying and controlling occupational risk factors.

Monitoring:
We closed 2024 with zero occupational diseases, the result of robust prevention efforts, early diagnosis, timely treatment, and effective rehabilitation.

Supporting Mental Health:
In 2024, we provided psychotherapeutic care to 322 Antamina employees and SSEE, as well as to 136 immediate family members of our employees.

Health Promotion and Prevention Programs:
We carried out large-scale vaccination campaigns against COVID-19 and influenza, encouraged physical activity, healthy eating, and restorative sleep. We offered services in physical therapy, nutrition, and occupational psychology. For employees working remotely, we implemented Home Ergonomics programs.

2.5

Supplier Management

GRI 3-3, GRI 2-25, GRI 308-1, GRI 308-2

→ We have built a solid and responsible supply chain designed to ensure operational continuity and generate shared value. We manage our suppliers under criteria of efficiency, environmental sustainability and social responsibility, aligned with our governance principles and commitment to local development. Our strategy promotes long-term sustainability, resilience to logistical disruptions, and timely response to needs through contingency plans for critical products and a strategic procurement plan. We incorporate environmental criteria into purchasing decisions according to the type of goods or services, and we apply international standards adapted to the national context, supported by specific procedures for supplier selection, evaluation, contingency management and compliance in international trade.

Throughout the year, our Strategic Partners actively participated in the company's operations and projects, demonstrating a consistent commitment to excellence, safety, and responsible development.

The following table shows the monthly evolution of the number of workers from our Strategic Partners (SSEE) throughout 2024:

Our Policies and Procedures

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Set	Oct	Nov	Dec
Number of SSEE personnel	11,586	10,745	11,573	11,700	11,786	11,384	12,239	11,406	11,204	11,540	10,090	9,220

CAPACITY BUILDING AND SUPPLIER ENGAGEMENT

At Antamina, we foster responsible, transparent and continuous improvement-oriented business relationships with our suppliers. In recent years, we have promoted various initiatives to ensure an efficient, competitive supply chain aligned with our performance standards.

PARTICIPATION IN BUSINESS ROUNDTABLES:

We actively participate in business roundtables as part of our strategy to disseminate key standards and procedures among potential suppliers. As a result of this effort, over the past three years we have incorporated more than 100 new suppliers, who established business relationships after successfully completing our evaluation process.

MEETINGS WITH AOI SUPPLIERS:

We maintain a constant dialogue with suppliers in our Area of Operational Influence (AOI), creating spaces for listening and mutual improvement. These meetings strengthen trust, align expectations, and address questions about contracting processes and performance.

TRAINING WORKSHOPS ON DIGITAL TOOLS:

In 2024, we trained 430 suppliers in the use of Antamina's digital tools designed to facilitate management, monitoring and communication processes. This initiative reinforced our joint capacity for more efficient and agile management.

These actions are part of our vision to build an inclusive, digitized and sustainable supply chain, with a focus on developing local suppliers and upholding our environmental, social and ethical commitments.

SUPPLIER ASSESSMENT

GRI 308-1, GRI 308-2, GRI 414-1, GRI 414-2

Continuous performance evaluation —based on indicators of quality, compliance, environmental performance, safety, and ethics— allows us to make informed decisions and drive continuous improvement.

We have a supplier homologation and prequalification system developed through Dun & Bradstreet, which evaluates commercial and compliance aspects. The registration process also includes reviews in credit risk bureaus and restrictivelists. In addition, as part of our engagement with local suppliers, we apply the Business Maturity Index (BMI), which strengthens their management capacity and competitiveness.

Our due diligence process focuses on identifying and mitigating risks related to anti-bribery management, supported by our Anti-Bribery

Management System, certified under ISO 37001:2016. This system provides an internationally recognized framework for bribery prevention and is applied across all stages of the procurement cycle, including engagement, selection, contracting and evaluation of suppliers. We also monitor the environmental and social performance of all suppliers with active contracts or service orders, and take timely action to address any issues identified, working through contract administrators and operators.

To ensure efficient and responsible procurement, we have implemented digital tools to facilitate interaction with the systems. To support their proper use, we develop training programs through webinars and in-person sessions for our suppliers.

In 2024, we assessed a total of 126 suppliers considering social criteria or impacts. Of these, 21 were identified as having significant, potential, or actual negative social impacts, mainly related to compliance with labor obligations toward their employees. As a result of these evaluations, improvement measures were agreed with 66.67% of these suppliers, while with 1.59% it was decided to terminate the commercial relationship.

Aligned with our commitment to promoting a socially responsible supply chain, in 2024 we conducted assessments of our suppliers to identify potential significant negative social impacts associated with their operations.

As a result of these evaluations:

- **In 16.67%** of cases, significant negative social impacts were identified, which led to the implementation of corrective measures agreed jointly with suppliers to improve their performance and ensure compliance with our standards.
- **In 1.59%** of cases, the impacts identified were severe enough to result in the termination of the business relationship, in accordance with our due diligence and business ethics policies.

These actions reflect our preventive and corrective approach to managing social risks within the supply chain, as well as our zero-tolerance policy toward non-compliance that could affect people or communities.

2.6

Cybersecurity

GRI 3-3, GRI 2-25

→ We are committed to innovation, technology, and cybersecurity as fundamental pillars of an efficient, safe, and sustainable mining operation. To achieve this, we have built specialized teams in cybersecurity, data governance, and analytics that work in full integration with our digital transformation strategy.

Our approach goes beyond simply adopting new technologies: we prioritize effective change management to ensure tangible value both in operations and in decision-making. We follow a Technology Roadmap focused on solutions that directly enhance productivity, safety, and sustainability. One example is the implementation of cybersecure predictive models in our concentrator plant, enabling us to optimize process performance.

Information security management is another of our strategic priorities. We operate under an Information Security Management System (ISMS) certified under ISO 27001:2022, supported by a Cybersecurity Operations Center (SOC) that monitors critical information assets in real time, ensuring their integrity, traceability, and availability.

This integrated vision positions us to meet the mining sector's digital challenges, manage technological risks, and advance our commitment to the country's sustainable development. During this year, no adverse impacts related to information security have been recorded.

Supporting Policies

Information Security

Policy – Defines the guidelines for protecting information, ensuring its confidentiality, integrity, and availability.

Data Governance Policy

– Establishes the directives for high-quality data management that drive Antamina's innovation and technology strategy.

In 2024, we further strengthened our cyber incident preparedness and response processes, aimed at reducing cybersecurity-related risks, with a strong focus on readiness and rapid response to potential incidents. Key risks identified include:

- Cyberattacks
- Disinformation and misinformation

Entre Among the main measures we have implemented are:

1

Incident Response Plan

A comprehensive plan was updated and implemented to enable a rapid and coordinated response to malicious cybersecurity events that could compromise information security.

2

Execution of Cyber-exercises (TableTop)

We conducted two simulation exercises that involved key company teams to review procedures, strengthen coordination, and improve decision-making in the face of cyber-attack scenarios.

3

Strengthening CyberSOC

We increased the scope of our Cybersecurity Monitoring Centers (CyberSOC) to enable us to detect and anticipate possible threats, contributing to the continuity and security of operations.

Key management milestones 2024

- Recertification to ISO 27001:2022 with zero non-conformities.
- Deployment of Waves 1 and 2 of the Corporate Data Governance Program.
- “Cybersecurity and Data Governance: Our Best Allies” campaign, carried out in Lima, Yanacancha (Mina), and Puerto Punta Lobitos (Huarmey), with more than 1,400 employees participating in three days of activation.
- Statistical models application, through the use of technologies such as machine learning, enabled us to increase equivalent copper metal production in the concentrator plant.

2.7

Risk Management

→ We operate with a structured, integrated, and systematic approach that enables us to anticipate risks that could impact our planning and operations, prioritizing resources based on their level of criticality. Our risk management is grounded in international standards such as ISO 31000 and the guidelines of the International Council on Mining and Metals (ICMM). We also apply a governance model based on the Institute of Internal Auditors' Three Lines, strengthening our organizational resilience through clearly defined roles and responsibilities for effective risk control.

Policies that guide our actions

We have policies and procedures that set out specific criteria and requirements for risk management, strengthening decision-making and building capabilities that reinforce our risk culture.

Risk Management, Change Management, and Business Continuity Policy:

Establishes the principles and guidelines that ensure consistent decisions and actions across the organization.

Antamina Risk Management Standard:

Defines specific criteria and requirements to guarantee consistency, quality, and compliance in the execution of processes and activities.

SIGRA Training Program: Builds the skills needed to effectively identify, assess, and control risks, reinforcing decision-making and strengthening the organization's risk management culture.

RISK MANAGEMENT MODEL

We applied a robust model based on the Three Lines:

To strengthen this model, we operate through our Integrated Risk Management System (SIGRA), which enables us to identify, assess, prevent, and monitor the main risks faced by the organization. This system is reinforced through audits, independent expert reviews, and business continuity plans that safeguard our strategic objectives and the sustainability of our operations.

Key management milestones

In 2024, the outcomes reflected the maturity of our risk management and Antamina's commitment to a culture of continuous improvement and resilience:

According to the latest report by International Mining Industry Underwriters (IMI),

85,9%

of risk reduction measures were adopted in accordance with international best practices.

This performance positions Antamina above

99%

of mining operations evaluated globally between 2014 and 2023.

Corruption-Related Company Risks

Total number of company areas	8 vice presidencies
Number of risks identified by company areas related to corruption	1 risk identified at the corporate level
Description of significant corruption-related risks identified through the risk assessment	Risk of corruption involving public and/or private officials. Management of this risk is complemented by ISO 37001: Anti-bribery management system, implemented in the company.

CHAPTER 03

Talent Management

We recognize that human talent is the engine that drives our growth. Our talent management is based on a strategic approach aimed at ensuring the future of the organization through the identification, development and commitment of key leaders and employees, generating sustainable value and a competitive advantage in a changing and demanding environment.

3.1

Our Team

GRI 3-3, GRI 2-7

→ We focus on attracting, retaining and developing highly skilled people, promoting an environment that fosters work-life balance. We meet the demand for diverse profiles and constantly work to strengthen the capacities of our teams, under an inclusive approach that responds to both the needs of the business and the personal and professional growth of our employees.

As of December 31, 2024,¹ we have 3,637 direct employees in Lima, Yanacancha, and Puerto Punta Lobitos:

3,637
employees

447
women

3,190
men

In addition, 13,149 jobs have been created through our strategic partners:

13,149
contractors

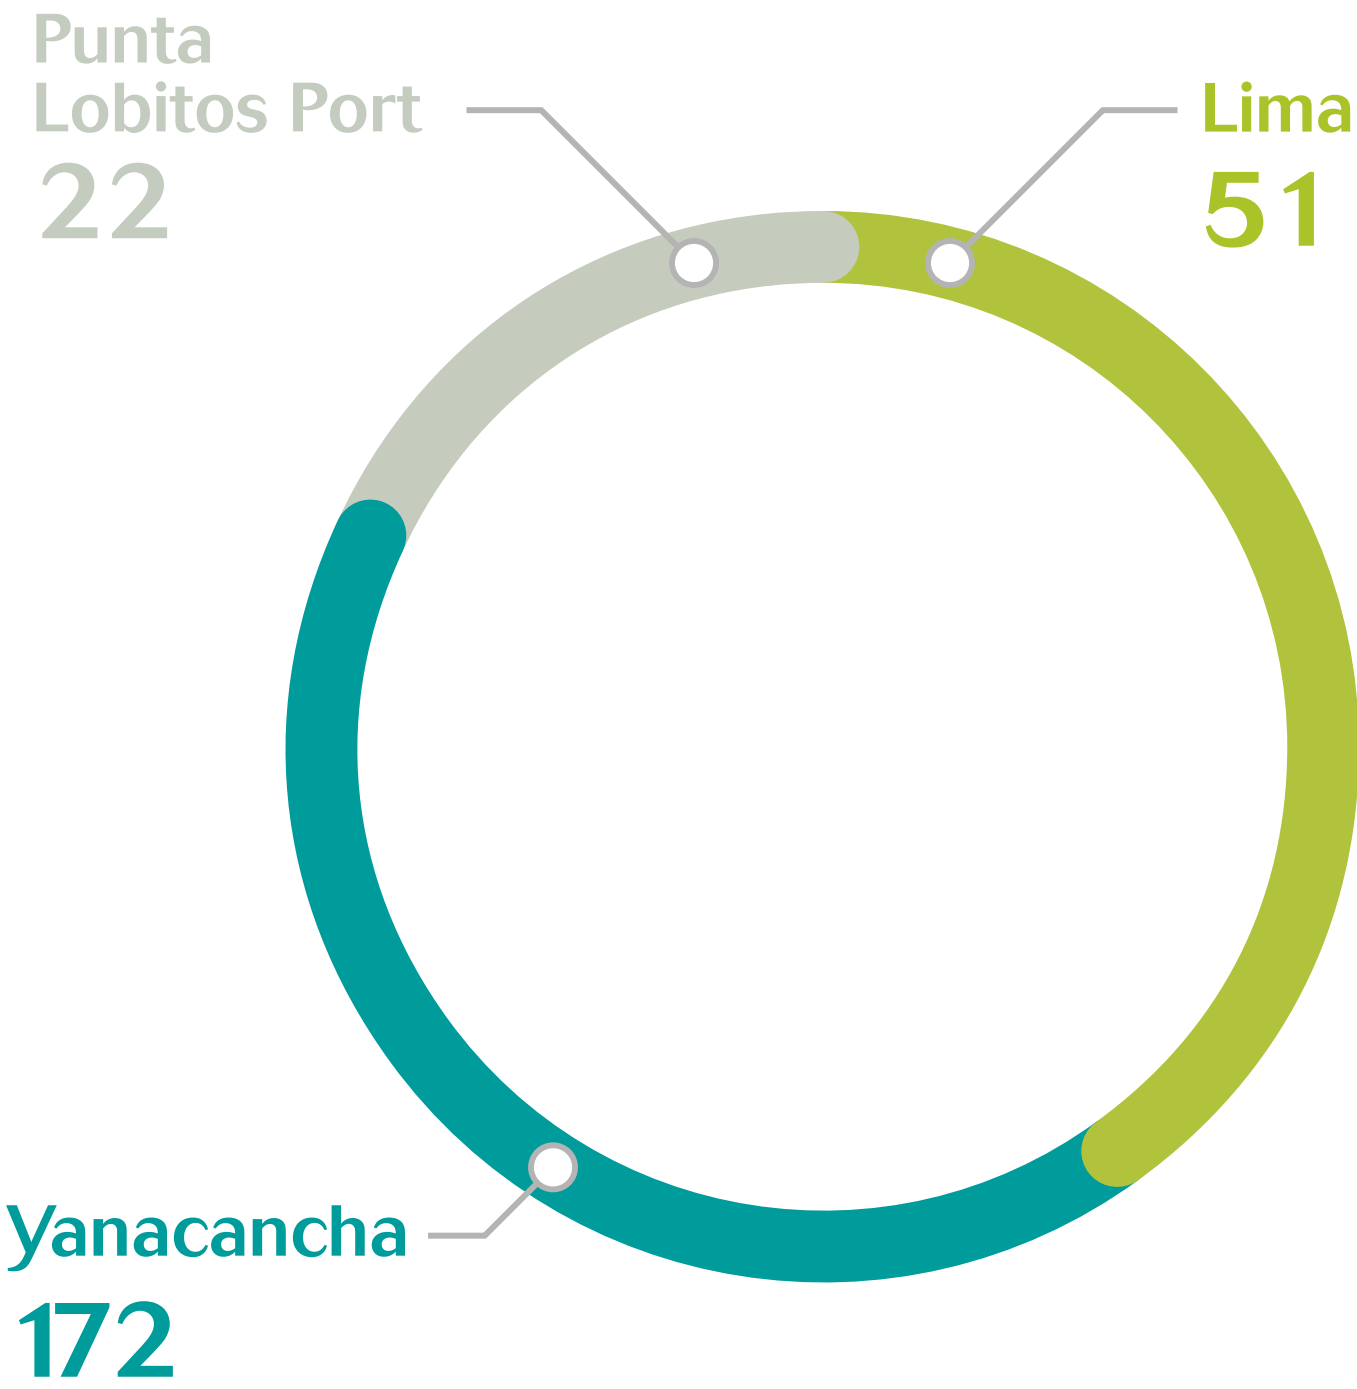

1,194
female
contractors

11,955

3.2

Learning Management

GRI 3-3, GRI 404-1, GRI 404-2

→ We understand learning as a strategic and continuous process that drives the development of key competencies, aligned with organizational strategy and culture. Through a solid regulatory framework, we ensure a fair and inclusive management of talent, contributing to generating value with competent employees committed to our objectives.

Every year, we identify the most relevant learning needs for the business together with our leaders. This participatory diagnosis allows us to align priorities, define key competencies and design training solutions with real impact. In this regard, we have defined seven key capabilities that guide our collective performance:

- Agile and inclusive leadership,
- Working in high-performing teams,
- Reciprocity practice,
- Continuous improvement and innovation,

- Project Management,
- Lifelong learning,
- Adaptability to change.

In 2024, we prioritized three core capabilities: agile and inclusive leadership, high-performing teams, and the practice of reciprocity. We conducted 27 training sessions on high-performing teams and reciprocity, with the participation of approximately 1,500 employees from different levels of the organization, and 18 workshops on agile and inclusive leadership, attended by 472 leaders, representing 75% of all leaders at Antamina. The workshops achieved an average Net Promoter Score (NPS) of 77%.

These initiatives reinforced knowledge, encouraged the use of new tools, strengthened our safety culture, and consolidated a shared purpose.

LEARNING PROGRAMS

We are firmly committed to the comprehensive development of our team. By investing in continuous training, we not only strengthen our operational capabilities but also foster a strong organizational culture focused on safety, excellence, innovation, and sustainability. We will continue to rely on the talent of our people as a cornerstone of our performance and future growth.

REGULATORY AND CORPORATE TRAINING

The goal of this program is to ensure that all employees understand and comply with current Peruvian regulations as well as our institutional commitments.

This training, delivered in both virtual and in-person formats, has reached our entire workforce.

63,379

training hours

88 %

satisfaction

93 %

of knowledge acquired

PLUS PROJECTS

Through this program, we aim to strengthen our capabilities in new technologies and methodologies. Based on Deming's continuous improvement cycle, it enabled us to apply what we learned in strategic projects related to sustainability, production processes, and technology enablers.

16,336

training hours

92 %

satisfaction

97 %

SPECIALIZED LEARNING

We promoted the development of specific technical skills tailored to the needs of each area. To achieve this, we offered opportunities such as certifications, seminars, workshops, conferences, and internal events.

36,648

training hours

88 %

satisfaction

77 %

of knowledge acquired

Additionally, we strengthened the skills required for the execution of key projects such as *W1 Ore*, *Epiroc PV351D Autonomous Drilling Machines*, the *Asset Management Tool (AMT)*, and *Data Governance*, among others. These initiatives enable us to adapt our capabilities to new technologies while effectively standardizing the learning process.

We reaffirm our commitment to the professional growth of our people by promoting learning opportunities and strengthening skills that are aligned with the organization’s strategic objectives, within a fair and merit-based environment.

ROLE MAPPING AND SUCCESSION

Clearly defining responsibilities, setting clear goals, identifying competency gaps, conducting objective evaluations, and aligning roles with business strategy all contribute to improved performance management. We have developed our own methodology for identifying critical positions and mapping internal talent. This strategic tool allows us to anticipate future needs, ensuring effective succession planning, well-managed leadership transitions, and the long-term continuity and sustainability of our operations.

3.3

Performance Management

GRI 2-27

→ At Antamina, we promote performance management as a strategic lever that enables us to translate our vision into concrete actions. Each year, we work closely with our leaders to identify priorities and goals aligned with the corporate strategy, which then become individual objectives that guide each employee's contribution to achieving our organizational commitments.

ACKNOWLEDGEMENT OF MANAGEMENT

MERCO 2024: Antamina was recognized as the mining company with the best reputation in the mining sector of Peru for the 11th consecutive year, by the Corporate Reputation Business Monitor (MERCO). In the general ranking that evaluates the top 100 companies in the country, we are in the top 4, which consolidates our reputation as one of the most valued organizations at the national level.

Employees

The Annual Performance Evaluation for employees considers two key components: achievement of objectives and the development of role-related competencies. In this process, we value not only the results achieved but also the development of skills, the application of best practices, and demonstrated commitment. In this way, we ensure a fair and objective evaluation that fully recognizes each employee's contribution to the execution of our strategy and the sustainability of the business.

Employees who excel in their performance are recognized through the BRAVO Recognition Framework; our annual ceremony celebrated together with their families. In 2024, 353 employees were recognized in different categories through the BRAVO Recognition Program. In particular, the Bravo Continuo program in Mine Operations achieved an average satisfaction rate of 80% among employees, both with the awards received and the ceremonies held, consolidating as a key tool to strengthen engagement and motivation in the operational environment.

On the other hand, employees who need to strengthen their performance receive support through personalized improvement plans, designed jointly with their supervisors and the Human Resources team. In this way, we promote continuous development tailored to individual needs and reaffirm our commitment to strengthening capabilities within a culture of continuous improvement and high-performing teams.

Annual Performance Appraisal for Employees 2024

	Number of Employees	% Of employees evaluated
Men	815	79%
Women	211	21%
Total	1026	100%

Annual Performance Appraisal for Operators

The Annual Performance Evaluation for operators contemplates differentiated structures according to management.

For the Mine Operations, Concentrator and Technical Services Managements, four key factors are considered: production (25%), safety (30%), assistance (25%) and organizational competencies (25%). This structure allows us to maintain a solid and transparent evaluation system, focused on the objectivity of the results, and fairly reflects the performance and effort of our employees.

In the case of Maintenance Management and support areas, the evaluation considers a series of factors that allow a comprehensive assessment. This includes: productivity (20%), safety (30%), compliance with standards and policies (10%), teamwork (5%), adaptability (5%), initiative (5%), commitment to work and the company (15%), orientation to continuous improvement (5%) and learning capacity (5%). This structure promotes a balanced evaluation, which recognizes the assessment of the supervisor.

Performance Appraisal for Operators

	Número de colaboradores	% de colaboradores evaluados
Men	2193	91%
Women	210	9%
Total	2403	100%

In 2024, we carried out initiatives to further strengthen performance management at Antamina:

Team Buildings – High-Performance Teams and Reciprocity Practice

We have implemented collaborative development spaces focused on team cohesion, alignment of purpose and culture of recognition.

In 2024, we launched a Retirement Management Program to support our employees in the final stage of their professional careers and to recognize their contributions. Their service was highlighted through personalized recognition, honoring their years of dedication and commitment to the organization.

After identifying those approaching retirement, we worked with their leaders to capture and transfer key knowledge, ensuring continuity of learning and strengthening team capabilities.

COMPENSATION POLICY

At Antamina, compensation is managed differently depending on the type of position, ensuring both internal equity and external competitiveness.

For operational personnel, compensation is defined in accordance with the provisions of the current collective bargaining agreement. For administrative staff, salary reviews are managed by the Compensation team, which is part of the Vice Presidency of Human Resources. This team prepares salary proposals that go through several stages of approval in line with our internal policy.

The salary structure for these positions is reviewed annually, taking into account market salary information.

In determining compensation, principles of internal equity and external competitiveness are applied. For the calculation of annual increases, the results of the Performance Evaluation are also considered. It should be noted that shareholders only participate in setting the CEO's compensation.

To ensure informed decisions, the company participates annually in a Market Salary Survey conducted by the consulting firm *Hay Group – Korn Ferry*, which serves as a key source for comparative analysis.

3.4

Work Climate

→ The organizational climate survey is a key tool for understanding how employees feel and assessing the overall health of the work environment. This allows us to make informed decisions to improve our internal culture, increase productivity, and strengthen team engagement.

We evaluate five essential dimensions:

- 1

Positive Work Environment:
Apsychologically safe space with balance and benefits for employees.
- 2

Good Management:
Cultural alignment and commitment to the organization, clarity of objectives, and workplace safety.
- 3

Management Practices:
Openness to innovation, effectiveness and commitment in collaborative work, and pride in belonging to Antamina.

- 4

Growth Opportunities:
Professional development opportunities, along with fair and transparent evaluation processes.
- 5

Strong Leadership:
Interactions with leaders that encourage problem-solving, foster a positive work environment, and ensure alignment between strategy and roles.

The first step toward building a stronger, more sustainable organization is listening to our team.

Work Climate Survey

	2019	2022
Work Climate Survey*	66%	78%

* It is conducted every three years.

SOMOS +WELLNESS PROGRAM

It is a strategic initiative aimed at consolidating a company focused on the health and overall well-being of its people.

We promote a healthy, safe, and motivating work environment where our employees are inspired to embrace a preventive culture. Our employee wellness program is structured into five action areas:

Prevention: raises awareness of the importance of self-care and comprehensive health management.

Health: encourages healthy habits to support physical and mental well-being.

Work-Life Balance: promotes balance between work and family life, strengthening the sense of belonging.

Sense of Community: fosters solidarity, connection among employees, and participation in volunteer programs.

Employee and Family Assistance: provides support spaces and guidance to promote family well-being, with close communication and practical resources.

This approach allows us to integrate and align our various wellness initiatives, improving the quality of life of our employees and strengthening confidence in our ability to meet their needs in a timely and effective way.

FREEDOM OF ASSOCIATION

GRI 2-30

This category includes employees whose working conditions and terms of employment are governed by one or more collective bargaining agreements. The company is obliged to apply these agreements to all employees covered, regardless of whether they are union members.

As a result, the number of employees covered by collective bargaining agreements may be greater than the number of unionized employees, since in some cases these agreements also extend to non-affiliated personnel. Some benefits included in the Collective Bargaining Agreement, such as the Vacation Bonus and the Education Bonus, apply to all employees of the company.

Number of Unionized Employees

	2024
Total number of unionized employees	2,136
Total number of employees covered by collective bargaining agreements	3,294

3.5

Diversity and Inclusion

GRI 2-27 GRI 405-1

We promote diversity and inclusion as a fundamental pillar of our organizational culture, fostering a work environment based on respect, equity, and freedom of expression—free from all forms of violence and discrimination. We were the first mining company in Peru to achieve gender parity in senior management positions. In addition, female participation in our workforce reached 12.31% in the past year.

To reinforce this commitment from senior leadership, we have a Diversity, Equity, and Inclusion (DEI) Committee, led by vice presidents, which oversees the implementation of key initiatives such as:

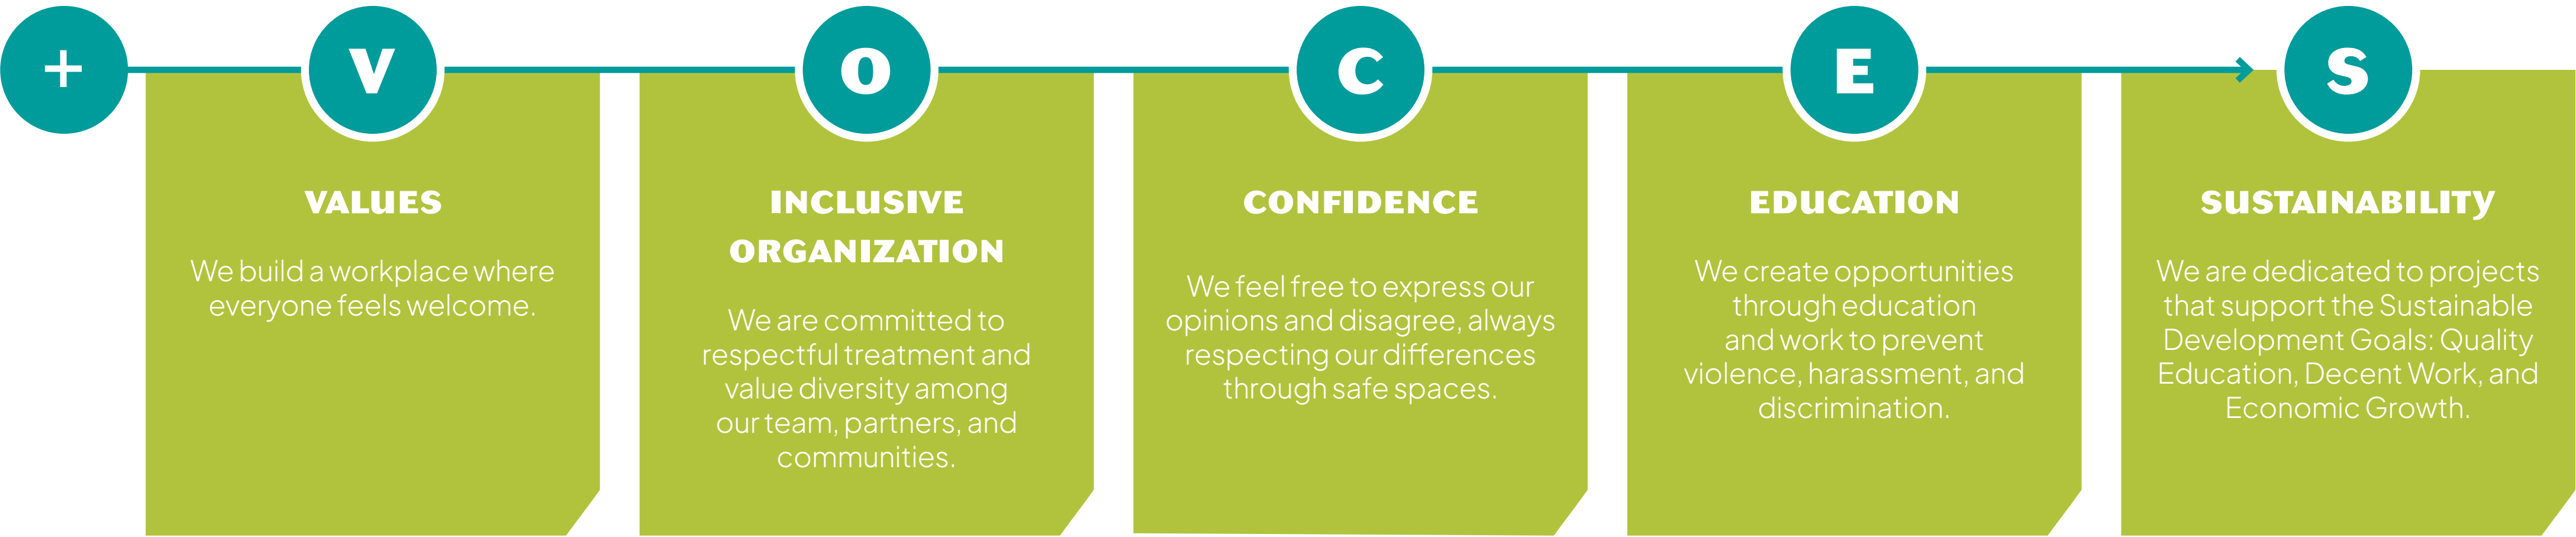

- Mandatory training on psychologically safe spaces, with more than 2,459 employees trained in 2024.
- Internal awareness campaigns.
- Tools and channels for reporting complaints.

Our DEI actions are guided by a clear policy with defined standards of conduct, reviewed annually through internal audits and risk assessments. These mechanisms enable us to identify gaps, monitor indicators—such as the rate of reported incidents and participation in inclusion initiatives—and define continuous improvement actions.

+VOCES PROGRAM

Our commitment takes shape through the +VOCES Program (VOICES Program), designed to create spaces where every individual can express themselves freely and respectfully. This program is structured around five areas of action and has been implemented across all our sites as part of a comprehensive strategy to foster inclusive, equitable, and safe working relationships.

Voces Program

In this way, we continue to strengthen equal opportunities, empower women, and promote an inclusive environment that benefits our employees, strategic partners, and the communities where we operate.

WORKPLACE SEXUAL HARASSMENT PREVENTION POLICY

We have a Workplace Sexual Harassment Intervention Committee (HSL, in Spanish) that is equally balanced in two dimensions: institutionally and by gender. It includes both primary and alternate representatives from the company and its employees. These actions reaffirm our commitment to promoting safe, inclusive, and respectful spaces for all people.

Since 2020, we have held the ‘Safe company, free from violence and discrimination against women’ Gold certification from the Ministry of Women and Vulnerable Populations, and this certification remains valid. To maintain this standard, we annually train 100% of our staff on the prevention of sexual harassment, violence, and discrimination. We also implemented a course on the limits of psychologically safe spaces.

In 2024, we held four workshops on HSL prevention for the committee and the Human Resources team, with 79 total participants.

CHAPTER 04

Sustainability

The Path to Development

We embrace our role as catalysts for social development, connecting communities, the State, and key stakeholders to transform social investment into sustainable results that enhance quality of life and foster regional development.

4.1

Contributions to the Country and the Ancash Region

→ We rigorously meet our tax obligations, fully aware that our contributions are key to the country’s development.

Taxes, Canon, and Royalties Paid (in millions of US\$), 2022–2024

	2022	2023	2024
Income Tax	850.6	656.4	714.5
Extraordinary Mining Tax	140.9	88.4	94.5
Mining royalties	169.3	100.4	106.3
Temporary Tax on Net Assets	30.2	34.4	39.2
Supplementary Mining Retirement Fund	18.1	12.7	11
Contribution by Osinergmin regulation	6.9	5.4	5.8
Contribution by OEFA regulation	5	3.2	3.4

AREA OF OPERATIONAL INFLUENCE

We work to promote the well-being and improve the quality of life of our neighbors in Ancash. To strengthen our social management and maintain close dialogue, we have defined an Area of Operational Influence (AOI), which extends beyond our Direct Influence Area and includes all communities connected to our operations, including those located along the pipeline and the electricity transmission line.

This area covers 20 districts across six provinces, encompassing high-Andean zones, inter-Andean valleys, and the coast, and has been organized into four Territorial Management Units (UGT).

	UGT Mina / San Marcos	High Andean Zone
	UGT Huallanca	
	UGT Valle Fortaleza	Inter-Andean Valleys
	UGT Huarmey	Coastal Zone

Antamina Slurry Pipeline

Area of Operational Influence Map

4.2

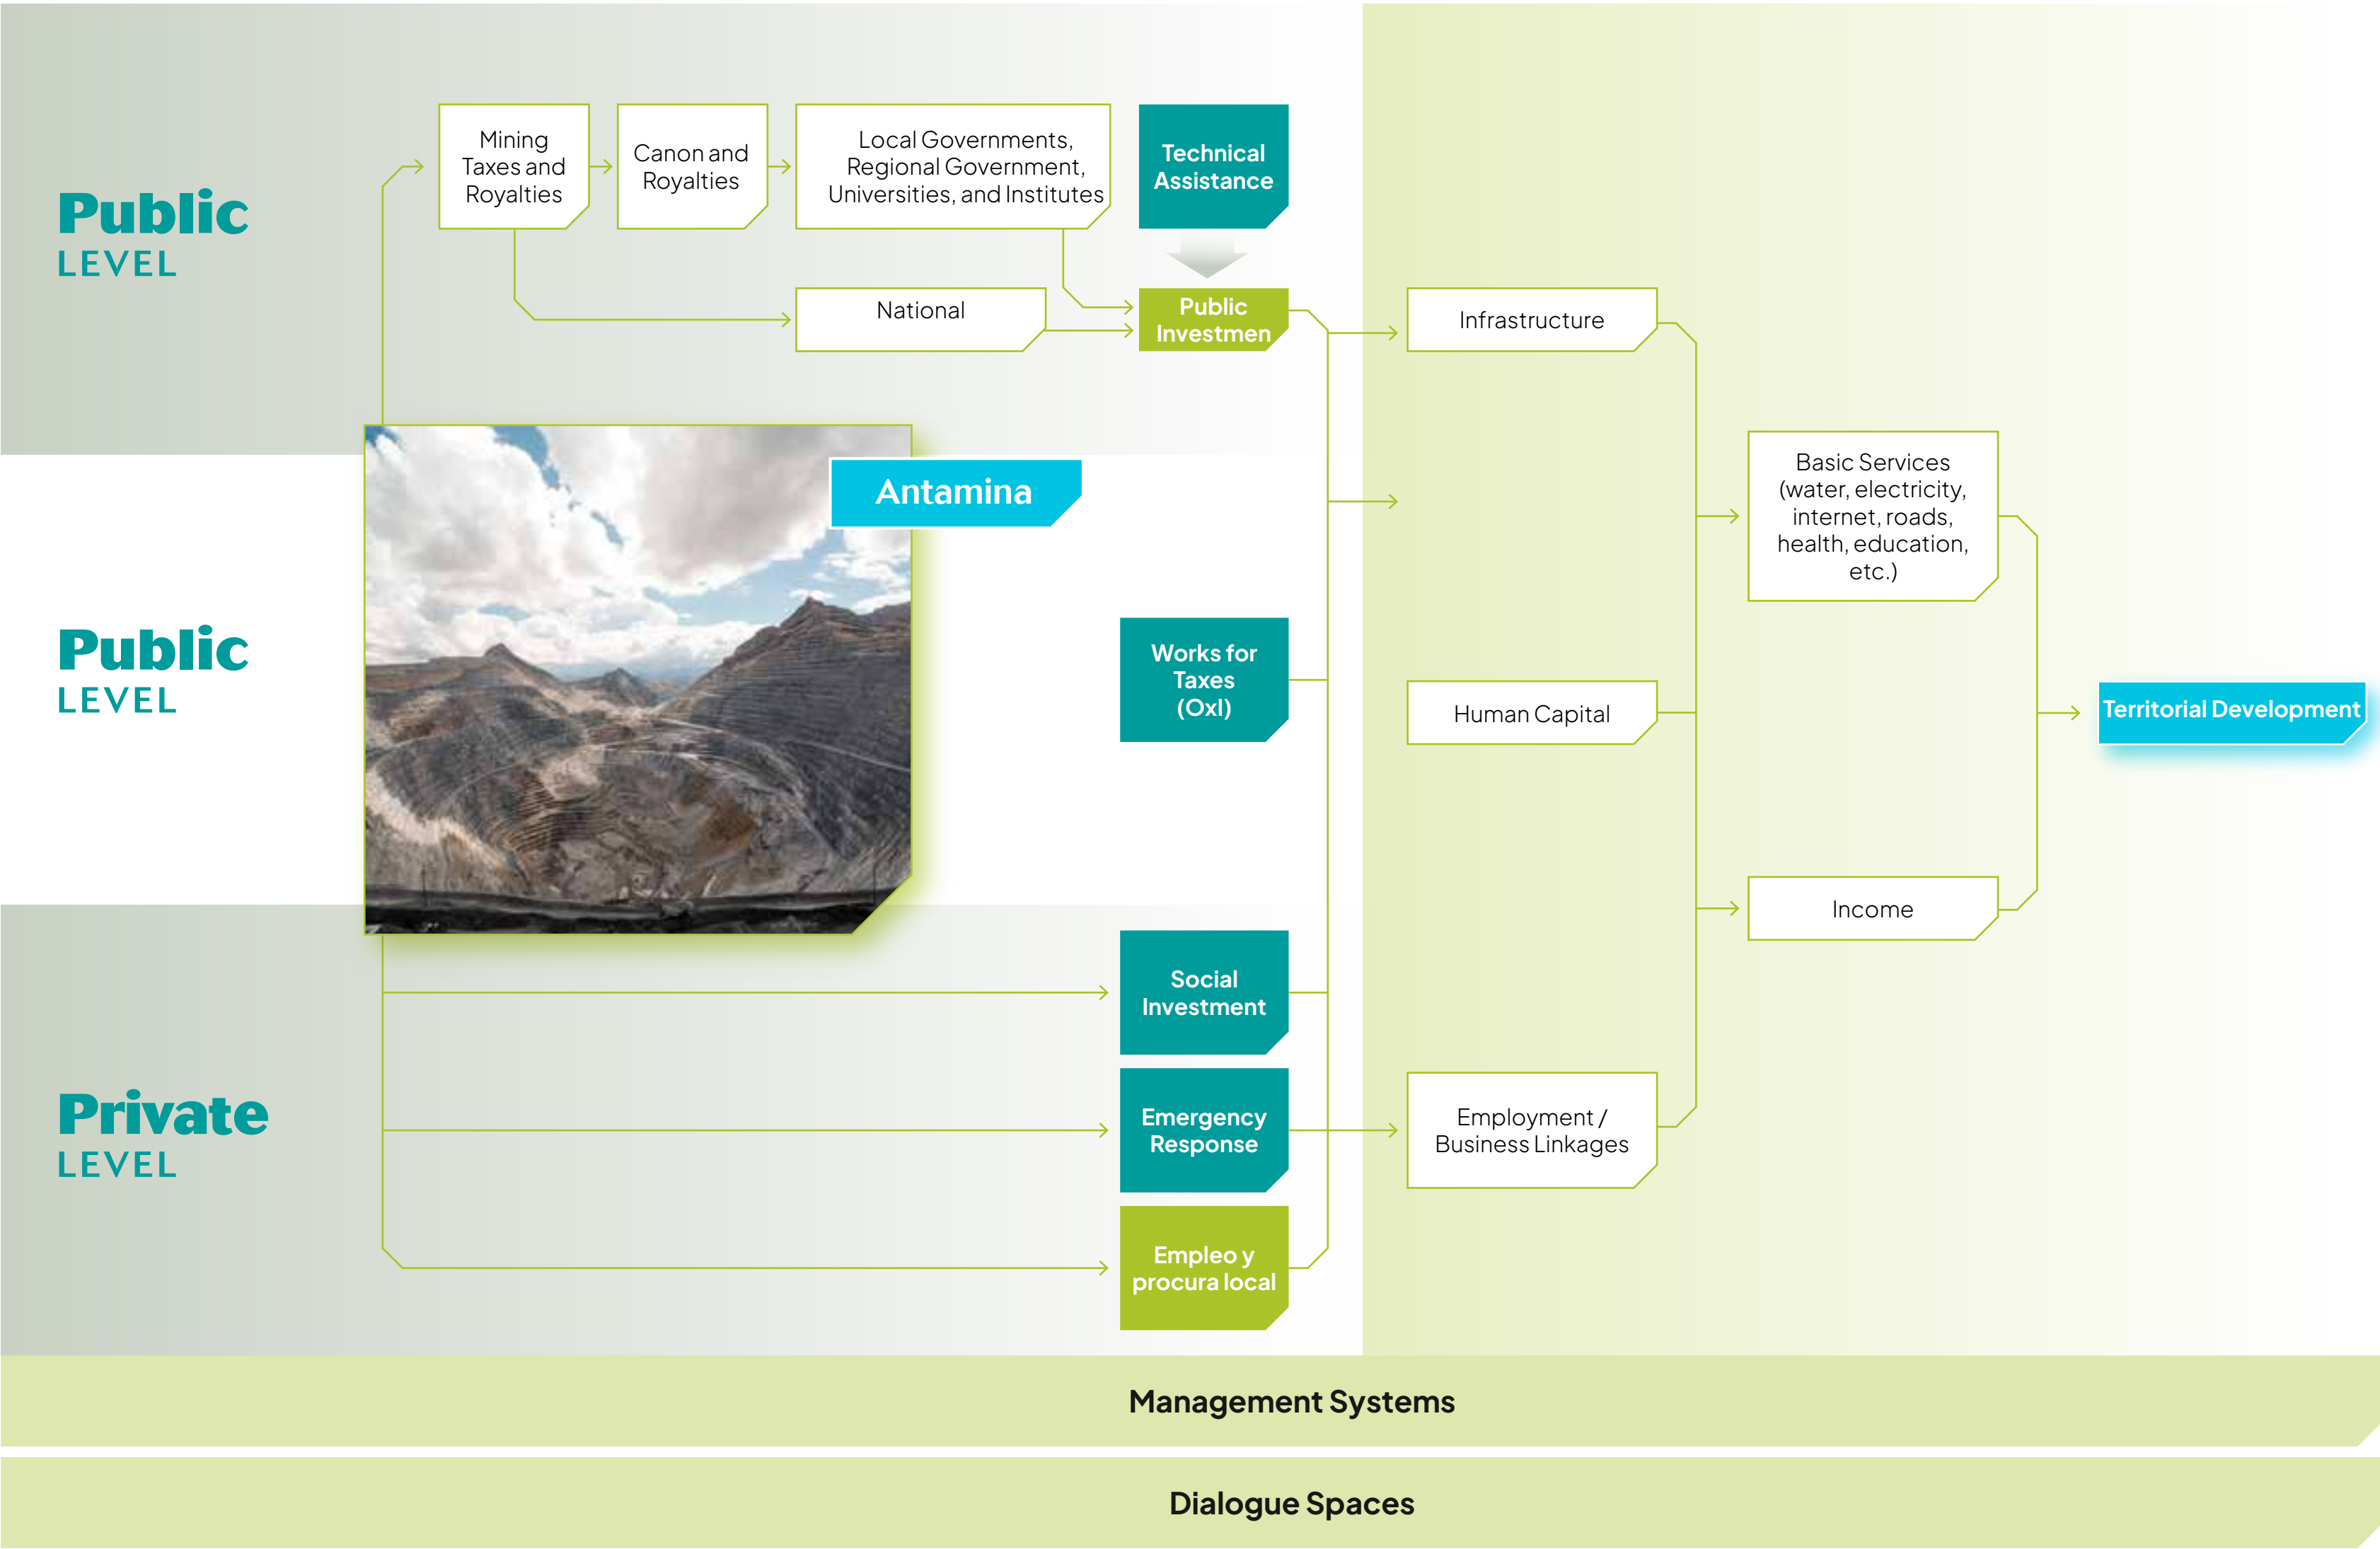

Social Management

GRI 2-27, GRI 3-3, GRI 2-25

→ Our strategic approach seeks to improve people's quality of life by acting as intermediaries between communities, the State, and other key stakeholders. Thanks to this model –based on dialogue and shared responsibility– we transform social investment into concrete, sustainable results that raise collective well-being and consolidate favorable conditions for regional development.

According to the 2024 Perceptions Study, 49% of the population in the direct social influence area consider their economic situation to be neutral, while 11% perceive it as positive. No significant indirect negative impacts have been recorded, reaffirming the effectiveness of our model in generating shared value and sustainable territorial development.

Territorial Development Model

SPACES FOR DIALOGUE

Through our Social and Socioenvironmental Management offices, we have consolidated a proactive engagement strategy within the Territorial Management Units (UGT) in Ancash. This strategy is implemented through dialogue and coordination spaces –such as dialogue tables, working groups, and participatory environmental monitoring committees– aimed at strengthening trust among communities, authorities, and civil society, while promoting a multi-stakeholder model of collaborative development.

The main objective of these spaces is to foster trust, transparency, and social and environmental governance. Dialogue tables serve as platforms for consensus-building among diverse local actors, while working groups address specific environmental, social, or infrastructure-related issues in a technical and focused manner. In both cases, collaboration among stakeholders enables the design of joint solutions and the prioritization of investments based on a locally driven, consensus-oriented approach.

Participatory environmental monitoring committees, in turn, play a key role in citizen oversight and environmental follow-up, involving local communities, authorities, and Antamina. These spaces verify compliance with environmental standards and facilitate access to information on water, air, and soil quality. An example of this is the Huarmey Environmental Monitoring, Oversight, and Supervision Committee (CMVFAH), established in 2001 to strengthen citizen monitoring of our operations.

DILIGENT HANDLING OF COMPLAINTS

We have a structured procedure for the timely handling and management of complaints, with the goal of reaching mutually agreed solutions that strengthen trust with our stakeholders. This mechanism also drives the continuous improvement of our internal processes by enabling us to identify relevant situations from the perspective of our external audiences. The procedure clearly defines the steps to follow, the roles of the people and areas involved, and the timeframes established for issuing a response. All complaints must be managed in a transparent, accessible manner, and at no cost to the complainant.

We offer accessible channels such as web registration, email, service at our five territorial offices, and verbal registration through our social workers. During registration, we verify whether the complaint is related to possible human rights violations. These communications include concerns about potential or actual negative impacts resulting from our operations or business relationships. We also take into account comments or concerns that arise through other channels, provided they are related to our business conduct or our social, environmental, or human rights performance.

In 2024, we strengthened the dissemination of our grievance mechanism through local media, complementing its inclusion in the amended Environmental Impact Assessment, approved in February. In parallel, we carried out external dissemination in the AOI, in Spanish and Quechua, and implemented a new channel for receiving complaints through an online form on our website—reaffirming our commitment to transparency and to fulfilling the activities agreed upon in the audit.

We have set a maximum response time of 45 days, whether in person or through digital channels, always confirming receipt. In 2024, we managed to address 85% of registered complaints, an improvement of nearly 20% compared to 65% in 2023. In addition, we reduced the median response time from 64 days in 2023 to 45 days in 2024.

Looking ahead to 2025, we will conduct on-site workshops with stakeholders to gather expectations and feedback that will help strengthen this process. Our human rights due diligence approach complements this mechanism, ensuring social legitimacy and regulatory compliance in our operations.

In writing

- By submitting a paper copy at any of our offices in the Territorial Management Units (UGTs), or at our Lima or Huaraz offices.
- By sending an email to our claims inbox: antaminateescucha@gmail.com
- By filling out the registration form via the following link: <https://teescucha.asip.antamina.com/>

Orally

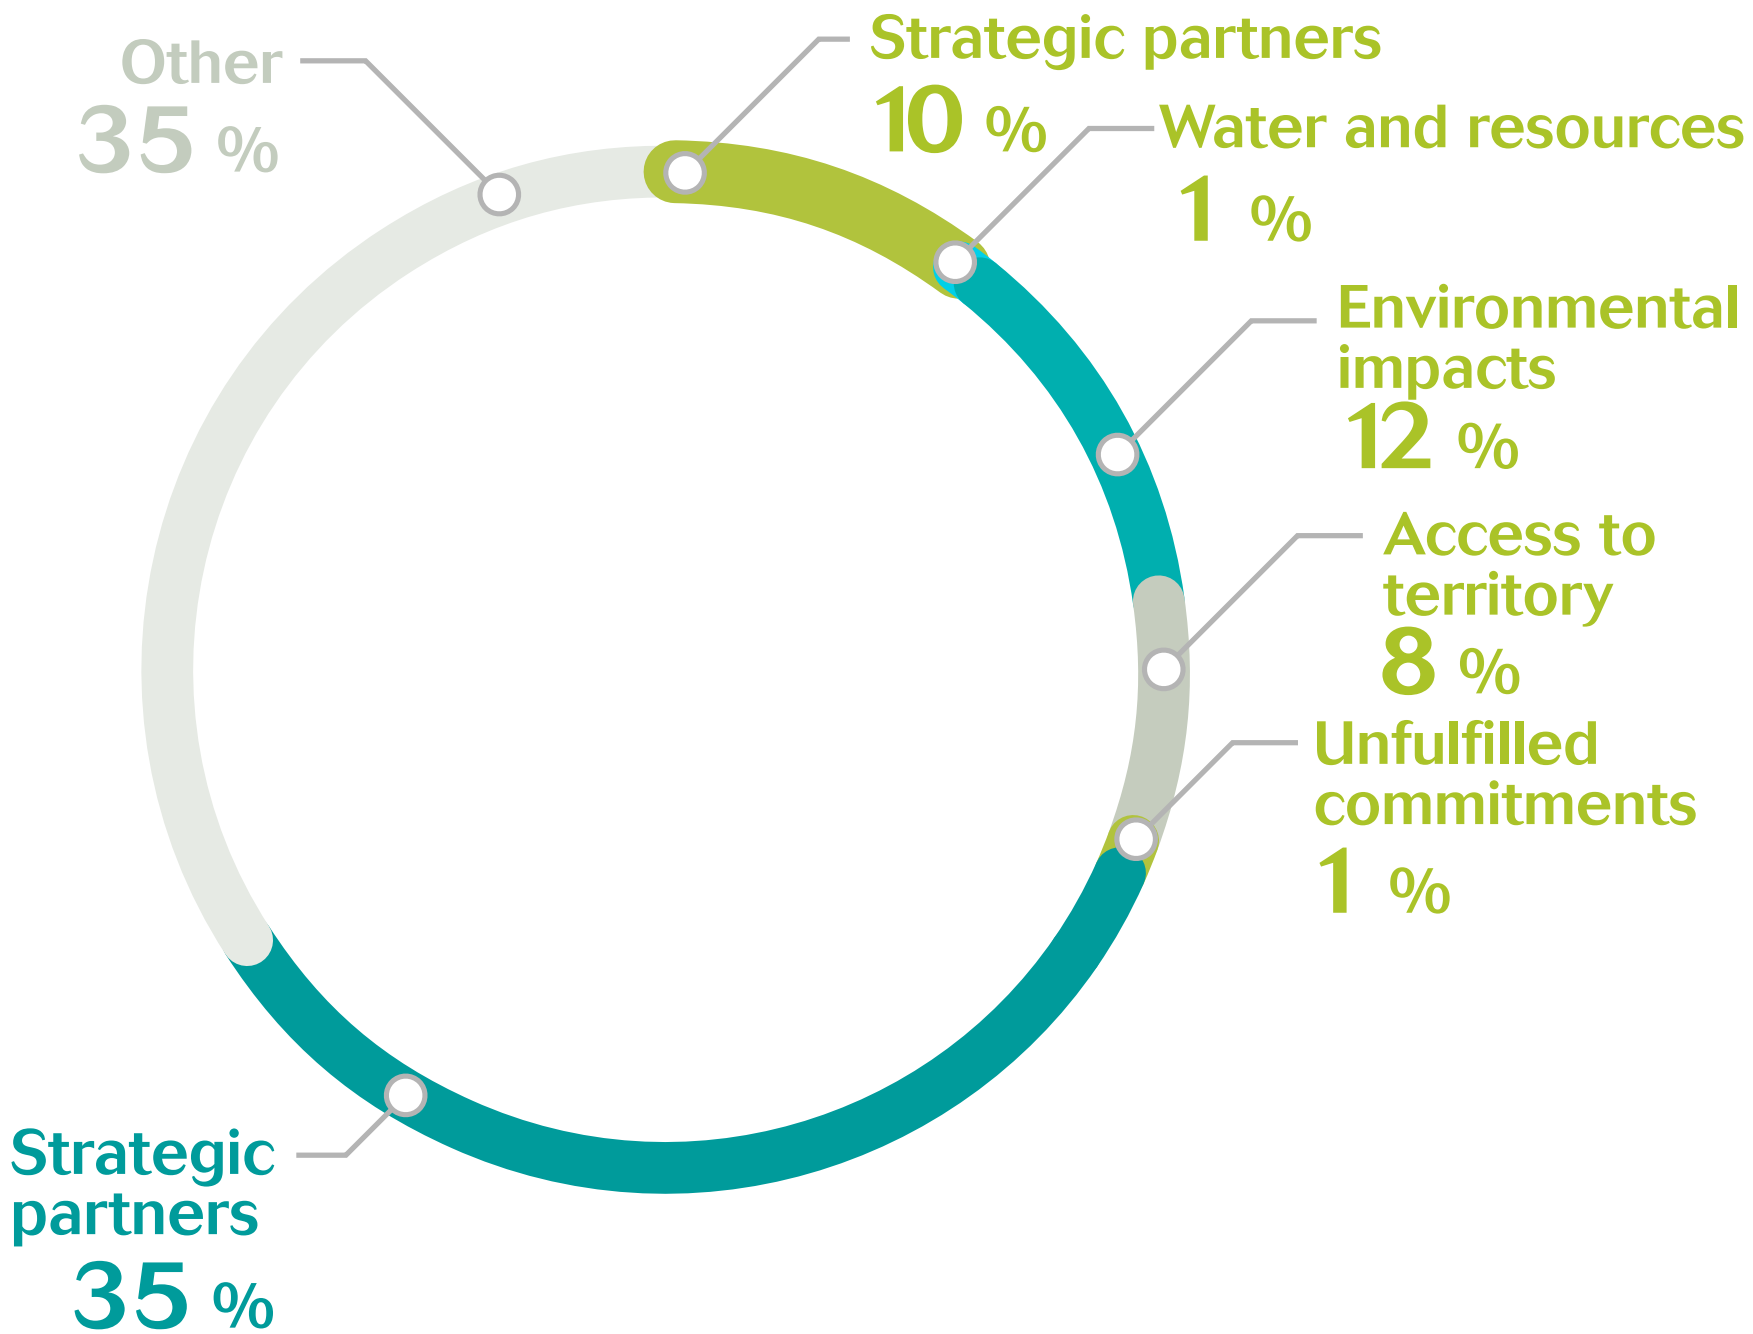

- By informing the Social Management Coordinator, who will help you formalize the claim in writing to facilitate its registration and processing.

Complaints addressed

GRI 14.10.4

COMMITMENT MANAGEMENT

In 2024, our commitment management strategy focused on optimizing the existing portfolio, prioritizing sustainable interventions aligned with our stakeholder's current needs. As part of this approach, technically unfeasible commitments were renegotiated and replaced with viable, sustainable alternatives that effectively addressed community demands.

We reduced the proportion of unfeasible commitments in the five-year plan budget from 28% to 8%, representing an improvement of 20 percentage points. In line with this, in 2024 the Territorial Management Units (UGTs) did not sign new bilateral commitments. In the UGTs Mine and San Marcos, which account for 78% of the portfolio, 107 commitments (34%) were executed and another 96 remained in progress, with a cumulative investment of US\$24 million. In addition, we fully complied with all MEIA-related commitments applicable to 2024 that required budget execution.

STRENGTHENING INSTITUTIONAL CAPACITY

We promote the strengthening of local institutional capacities by providing technical support to authorities in managing investment projects. This collaboration increases their responsiveness to social demands, enhances their technical competencies, and reinforces their role as active agents in territorial development.

Since 2023, we have been implementing a specialized technical assistance initiative aimed at strengthening management capacities throughout the entire state investment cycle, including the commissioning of public infrastructure. This initiative is being implemented in the San Marcos District Municipality and, since 2024, also in the Ancash Regional Government.

San Marcos District Municipality

During 2024, the San Marcos District Municipality achieved the following milestones:

- Execution of 44.8% of its annual budget, far exceeding the average of previous administrations, which hovered around 30%.
- Reactivation of 80% of the works previously classified as suspended, six of which represent a joint investment of approximately S/ 75 million.

These results were made possible thanks to the coordinated work between municipal officials and a strategic partner specialized in public management, who provided technical advice, support, and continuous training. This approach made it possible to organize and prioritize the investment portfolio under the administration of Mayor Manuel Ugarte, consolidating a more efficient and results-oriented municipal management.

In addition, we support the formulation of the municipality's Participatory Development Plan, also with the support of a technical partner. During the second semester of 2024, the participatory diagnosis was prepared, and the final document is expected to be socialized during the second semester of 2025.

Ancash Regional Government

In the case of the Ancash Regional Government, our technical assistance has been key for regional authorities to prioritize a portfolio of region-wide projects, incorporating control and technical assurance tools throughout the entire public investment cycle. This process has also allowed for diversification of execution modalities, including projects under public-private partnership arrangements such as Works for Taxes (OxI) and Public-Private Partnerships (PPP). Thanks to these advances, Ancash leads the national ranking for public investment executed under OxI.

During 2024, a prioritized list of 31 projects was developed, with a projected investment exceeding S/ 2 billion. Among the most notable are:

Improvement and expansion of the Víctor Ramos Guardia Hospital:

S/ 1'000,000,000.00

Construction of the Chiquián Health Center:

S/ 84'000,000.00

In addition, one of the year's most significant achievements as part of this same technical assistance process was the acquisition of 100 patrol vehicles for the Peruvian National Police, prioritized within the regional citizen security plan and strengthening of public services.

4.3

Investment for Development

→ Our social investment strategy aims to contribute to human development in the areas where we operate, focusing on closing gaps. These actions strengthen the sustainability and viability of mining activities while highlighting the territory's potential for the benefit of its population.

EDUCATION

GRI 3-3, GRI 413-1

Our commitment to equity seeks to break the intergenerational cycle of poverty, ensuring that new generations have better opportunities from childhood through to labor market entry. In this way, we position ourselves as an active partner for the sustainable development of Ancash, promoting collective well-being and comprehensive education.

Scholarship program: education and training for the future

In 2024, we assessed the impact of our scholarship program for higher education:

110
young beneficia-
ries

36%
earn between S/
1,000 and S/ 2,000,
and 11% between S/

ments in education,
employment, and
productivity

Efecto Áncash Program

Since 2017, we have promoted the Efecto Áncash program, which aims to improve educational quality in schools in the AOI communities by increasing learning outcomes and developing social-emotional skills that foster citizenship among youth.

The program involves 47 educational institutions in the districts of San Marcos, Chavín de Huantar, Huachis, San Pedro de Chana, Huarmey, Cajacay, Colquioc, and Pararín, along with 47 teachers and 13 principals.

This program is developed in partnership with the Ancash Regional Education Directorate (DREA) and the Local Educational Management Units (UGELs) of Huari, Huarmey, Bolognesi, and Recuay, successfully establishing a cooperation framework between the regional government and us.

HEALTH

In 2024, we carried out scheduled medical campaigns in the AOI.

10,749
patients treated in 56 days

34,125
medical consultations
in various specialties

**Strengthening of 4
healthcare** facilities through
the delivery of materials, supplies,
and equipment that supported their
reclassification processes

Aware of the importance of primary healthcare, we financed the hiring of 18 healthcare professionals under the agreement with CLAS San Marcos. This initiative has significantly improved the coverage and quality of service in facilities near our operations. Thanks to this funding, 78,466 consultations were provided during the year, reinforcing our commitment to accessible, timely, and quality healthcare in the territory.

We provided humanitarian financial assistance to AOI residents facing emergencies, urgent situations, or severe/complex illnesses, ensuring timely access to specialized medical services. In 2024, we responded to 100% of 152 funding requests for medical care, directly benefiting individuals in critical health conditions.

FOGEL Project – Strengthening Local Management

Since 2016, we have promoted the FOGEL— Strengthening Local Management project, which, since 2023, has focused on Early Childhood Development (ECD), within the framework of the child-first policy. We work with local governments and the health sector to ensure that children—from gestation to age five— have timely access to a prioritized package of services aimed at promoting early childhood development in AOI districts.

We also held ECD service fairs in the districts, organized a best practice gathering, and strengthened six out of seven health micro-networks. A total of 137 community actors monitored 793 children under 12 months and 137 pregnant women. We also trained 44 healthcare professionals in prenatal care and 36 officials in public investment related to ECD.

This project is developed in partnership with the Regional Health Directorate (DIRESA) to establish technical cooperation in favor of the AOI population

through Early Childhood Development actions in 13 districts and the use of data from the INFOGEL Observatory in 17 districts.

**16 % reduction in
chronic malnutrition**

**13% reduction in anemia in
children under 3 years**

47% coverage of women
who had institutional childbirth
received the full-service package

**60% of children under 12 months in
intervention districts receiving the full
package of services**

**89% of drinking water systems
are in good or fair condition**

GENERATING ECONOMIC OPPORTUNITIES

GRI 3-3, GRI 413-1

We promote private investment, productive transformation, and the use of the territory's comparative advantages, with the goal of generating non-mining income and sustainable employment. We aim to diversify the local economy by strengthening value chains with economic potential, formalizing enterprises, and developing capacities in local and community-based businesses.

To achieve this, we foster a synergy-driven ecosystem that coordinates efforts with State entities such as SENASA, INIA, Agromercado and ProInnovate, as well as with local and regional governments through mechanisms like PROCOMPITE. We also promote strategic alliances with public and private sector actors, encouraging technology transfer and capacity building for a more resilient, inclusive, and competitive territorial economy.

In 2024, we made significant progress in this area, implementing a program for the development of participatory development plans in two provinces and five AOI districts, aimed

at strengthening local governments' planning capacity. We also developed a diagnostic and local employment plan which, between June and December, increased local labor participation from 24% to 40%. In addition, we continued promoting initiatives that complement the educational and emotional development of children and adolescents. Examples include:

- The Youth Academy and academic reinforcement workshops were attended by 292 students.
- The “Crecemos con Amor” program involved 134 families.
- The “Mente Sana” program benefited 154 students, 85 families, and 88 teachers.
- A 20% increase in jobs generated compared to 2023.
- Around 60 enterprises exceeded their first year of operation.

03

04

Sustainability – The Path to Development – 05

A

<

>

Our goals are realized through a broad portfolio of initiatives focused on addressing specific territorial needs, coordinated with public and private actors to achieve sustainable impact. The following stand out:

Strengthening Business Management Capacities

Objective

To strengthen the management capacity of key local actors to drive the territory’s economy and integrate them into sustainable value chains. We focus on institutional strengthening, business skills development, and the improvement of technical and administrative processes in local and community-based enterprises.

Achievements

- In the community of Santa Cruz de Pichiu, we supported the community enterprise COMISSA in its institutional strengthening process, consolidating a management team and board of directors with business competencies and promoting good practices in accountability and process control. COMISSA fulfilled its tax and labor obligations, which generated formal employment for 25 people (7 women and 18 men), expanded operations to La Libertad and Lima, and obtained three international ISO certifications (37001:2016, 14001:2015, 45001:2018).
- Five local companies received technical assistance in project planning, management, and reporting, becoming strategic partners.
- We strengthened 70 ventures through training in business management, financial linkages, and trade fairs in sectors such as beekeeping, chocolate, production, bakery, technical consulting, and educational services.

Partnerships for Biodiversity Conservation and Agro-industrial Development

Objective

To promote the conservation of local genetic resources, improve food security, and strengthen sustainable agricultural development through strategic alliances.

In coordination with the Ancash Regional Agriculture Directorate and the community enterprise COMISSA from Santa Cruz de Pichiu, we signed an agreement for technology transfer and genetic material aimed at conserving the biodiversity of native potatoes, recognizing community members as custodians of ancestral varieties, and reinforcing the sustainability of food security for small farmers.

Achievements

- Technical assistance to 2,100 small-scale agricultural producers in good agricultural practices, along with the delivery of high-quality genetic seeds and inputs for potato and pasture cultivation.
- Training provided to five seed-producer organizations and 80 community members from Santa Cruz de Pichiu in seed production and commercialization.
- Assistance to 650 producers in livestock management for large animals and family farming systems.
- Promotion of native colored potato varieties with agro-industrial potential and establishment of the first commercial plot in Santa Cruz de Pichiu, in partnership with MIDAGRI, agribusiness, and local producers.
- Implementation of the first pilot program for productive reconversion in territories located above 3,500 meters above sea level, introducing strawberry cultivation as an alternative for high-Andean family farming in the district of San Pedro de Chaná.

Promotion of Hass Avocado Cultivation for Agro-Exports

Objective

Promote the development of new business models linked to agro-exports along the coastal area, with a focus on improving the productivity and commercial capacity of small farmers integrated into the avocado crop value chain.

Antamina and Talsa Agroexport have established a strategic partnership to provide specialized technical assistance in Hass avocado cultivation to farmers and agricultural organizations in the Fortaleza Valley. This collaboration aims to strengthen the productive and commercial sustainability of Fundo La Villa—an agricultural estate belonging to the Pararín peasant community—through a social management approach that also reinforces the agro-export model of this product, with the active participation of local farming organizations.

Achievements

- 793 farmers were integrated into the avocado value chain in Huarmey and Fortaleza through technical assistance and partnerships with the agro-export sector and the agricultural agency.
- Three producer associations (representing 267 families) were linked into national and international markets. These associations include: Fundo Estancia (focused on Hass avocado agro-exports), Fundo Platanal (oriented toward the national market and supplying the

Yanacancha camp), and the Aspill Huallanquinita dairy plant, which supplies products to both the Yanacancha camp and the national market.

- In the district of San Marcos, we supported the Asociación 5 Troncos del Fundo Chipta (5 Troncos Association of Fundo Chipta) in the installation of 22 hectares of Hass avocado at Fundo Chipta San Marcos and 10 hectares in Pararín.
- Training was provided to two organizations in strategic crop management and avocado commercialization, strengthening their linkages with the agro-export sector.
- 85% of the fields were harvested within the established timelines.
- A competitive price was obtained in the commercialization process, ensuring profitability and sustainability.
- 91% of the harvest successfully exported, consolidating our presence in international markets.
- Strengthening of the trust network and recognition between Talsa, Antamina and local farmers, promoting sustainable and collaborative relationships.

Livestock Development

Objective

To drive livestock development within our AIO by strengthening productive units and improving cattle genetics.

Achievements

- Genetic Improvement Program (PROMEG): 111 calves born through artificial insemination and 17 through embryo transfer, in partnership with the National Institute of Agricultural Innovation (Instituto Nacional de Innovación Agraria, INIA).
- 342 livestock families from Huallanca and 120 families from Cajacay and Pampas Chico benefited from technical assistance in good livestock practices, access to genetic improvement services, micro-reservoirs, materials for barns and improved-breed animals.
- Producers integrated into the milk and dairy products value chain.
- Incorporation of the Tres de Mayo Livestock Association (a dairy producers' organization) into the Yanacancha camp supply chain. It supplies products such as fresh cheese and consolidates a local production model with direct economic impact.

Intro

🏠

>

Guinea Pig Breeding Commercial Development Program

Objective

To improve production efficiency and commercial integration for guinea pig producers in the districts of San Pedro de Chana, San Marcos, Cajacay, Raimondi, Chasquitambo, Paramonga, and Huarmey.

Achievements

- Implementation of a breeding center in Huarmey in partnership with INIA.
- Formalization of a commercial hub of guinea pig producers with a farm in San Marcos
- 150 producers trained in breeding guinea pigs with high technology, of which 23 have commercial farms for the production of breeders.
- 885 families received technical assistance and training in good practices.

Handcrafted Textile Value Chain Development Program

Objective

To economically empower rural women through capacity building in textile craftsmanship and their integrating them into markets.

Achievements

- 250 rural women from Juprog, Ayash Huaripampa, Ayash Huamanin, Santa Cruz de Pichiu and San Marcos trained in crochet, weaving techniques, machine operation, quality control and production management.
- Seven women’s weaving organizations integrated into local markets.
- One organization integrated into the export-oriented textile value chain, directly benefiting 80 women.

Individual and Associative Entrepreneurship Promotion Project

Objective

To promote entrepreneurship in the district of San Marcos through training, technical assistance and financial integration aimed at consolidating sustainable businesses.

Achievements

- 40 new ventures advised up to the prototype development and commercial validation stage.
- 20 ventures strengthened with working capital.
- 58 entrepreneurs trained in idea and business model development, cost management, sales, sales digitalization, digital marketing and financial integration, in partnership with COFIDE and Caja Piura. A producer organization from the Ishanca Sector - Ayash Huaripampa - District of San Marcos launched a fruit-growing business linked to the local market and 66 ventures integrated into commercialization for the Yanacancha camp supply chain.

All these actions are developed in a participatory manner with our stakeholders, who actively engage in defining, implementing and evaluating our initiatives through institutionalized spaces for dialogue and consultation. Through social studies, territorial diagnoses and participatory feedback processes, we strengthen transparency and adjust our interventions to align with local priorities.

CLOSING INFRASTRUCTURE GAPS

GRI 203-2

In 2024, we continued to prioritize the Oxl mechanism as an effective means to accelerate the closing of gaps in our AOI:

- Projects executed for more than S/153 million in 2024.
- 27% of total local public investment in the territory.

We focused on key sectors to improve the population’s quality of life:

- We allocate US\$25.7 million for the health sector
- US\$7.8 million for education
- US\$5.2 million for water and sanitation

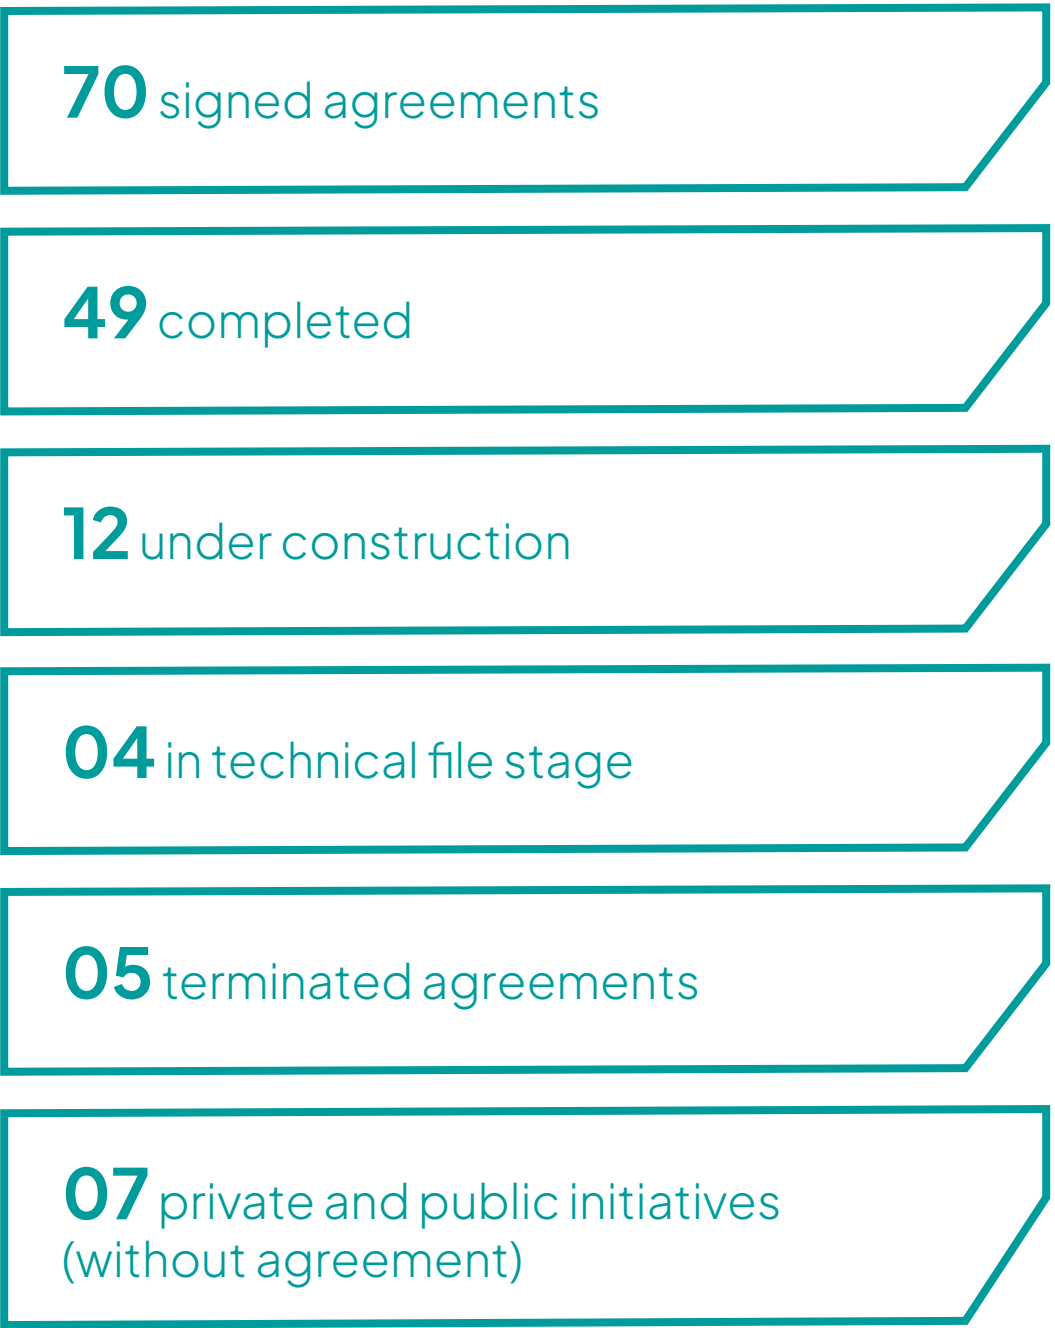

Our main projects executed under the Oxl mechanism

HUARI HOSPITAL	
Status 2024: under construction.	It will benefit more than + 102,129 people
Total investment: S/ 208’000,000.00.	
HUARMEY HOSPITAL	
Status 2024: under construction.	Beneficiaries: +102,129 people
Total investment: S/ 219’000,000.00.	
SAN MARCOS WATER AND SANITATION SYSTEM	
Status 2024: under construction.	Beneficiaries: +34,000 people
Total investment: S/ 137’000,000.00.	
with access to clean and safe drinking water.	
LLATA HOSPITAL	
Status 2024: completed and delivered.	It will benefit more than 47,000 people
Total investment: S/ 190’000,000.00.	
HUARMEY WATER AND SANITATION SYSTEM	
Status 2024: under construction, scheduled for completion in 2025.	Beneficiaries: 34,000 people
Total investment: S/ 221’000,000.00.	
COAR ANCASH	
Status 2024: work completed and delivered.	Beneficiaries: 300 high school students
Total investment: S/ 137’000,000.00.	
from Ancash will benefit per one year.	

Through each of these interventions, we reaffirm our commitment to the sustainable development of the territory, investing in high-quality public infrastructure that generates lasting positive impacts for the communities with which we interact.

Details of Awarded Projects

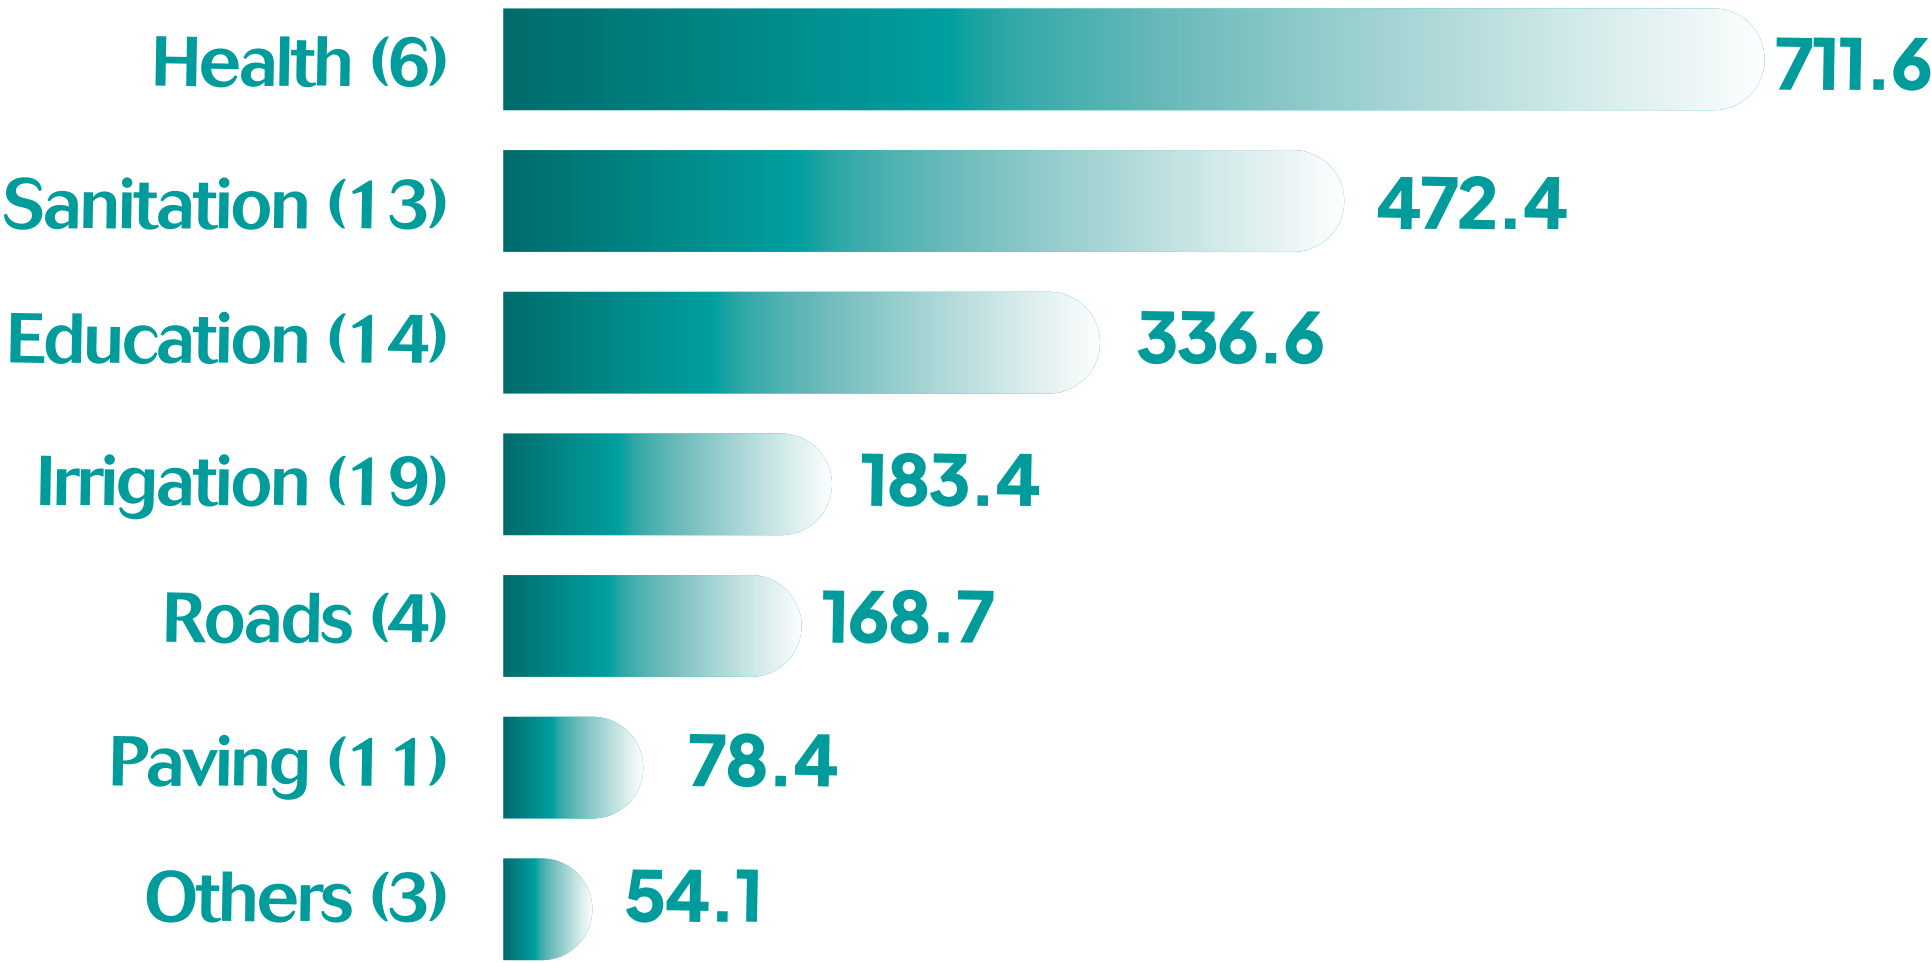

S/2,005.3 million

By Public Entity

By Sector (S/million)

TERRITORIAL SUPPORT

In 2024, our efforts focused on responding to climate and health emergencies and strengthening citizen security. One of our strategic priorities is the prevention and management of emergencies and disasters, with the objective of protecting the population, minimizing damages, and restoring affected public services in a timely manner.

Strengthening Road Connectivity

Throughout 2024, we continued supporting various levels of government to improve road transitivity across different routes in the Ancash region.

- **PE 3N (Conococha – Huaraz Section, 78 km)** Between January and March, road recovery works were completed along this section of Route PE 16, restoring transitivity conditions that allowed the movement of vehicles and people to the provinces of Callejón de Huaylas and Callejón de Conchucos, benefiting more than 500,000 people. These works provided the competent authority sufficient time to contract recycling and resurfacing services for this section.
- **PE 3NH (Huamanín – Llata – Nueva Flores – Tingo Chico Section, 63 km)** Between February and July, emergency maintenance was completed along the entire route, enabling normal vehicle transit to the province of Huamalíes and benefiting more than 65,000 residents.

- **PE 3N and PE 3NE (Conococha – Pachapachi – AN 111 Junction Section, 70 km)** Since the year 2000, Antamina has maintained an agreement with the transportation authority under which the company performs periodic and routine maintenance of both routes. As a result, these roads remain in excellent transitivity conditions.
- **AN 111 (PE 3N Junction – Antamina – PE 3NH Junction – Carhuayoc – San Marcos Section, 86 km)** In January, a Collaboration Agreement was signed between Compañía Minera Antamina, the Regional Government

of Ancash, and the District Municipality of San Marcos to prepare the pre-investment studies and technical file, fully financed by Antamina, for the rehabilitation and improvement of this road. Following coordination among the parties, the Terms of Reference (ToR) were approved, and the consulting firms responsible for the pre-investment study and its supervision were hired. The first deliverable has already been submitted for review and approval.

- **AN 109 (Huarmey – Aija – Recuay Section, 109 km)** During 2024, we continued to fulfill

the commitments established in the Collaboration Agreement with the Regional Government of Ancash, under which Antamina committed to finance both the profile-level and detailed technical studies. Accordingly, in September, the Terms of Reference (ToR) for hiring the consultant to prepare the pre-investment studies were approved, and in October, the ToR for the supervision consultancy were also approved. These documents mark key progress in the development of the project.

Preventive Actions

In 2024, we allocated US\$428,000.00 to preventive measures against extreme climate events in the Fortaleza Valley and Huarmey, areas highly vulnerable to climate change. This investment was directed toward risks reduction and better community preparedness for potential emergencies.

We also provide logistical support to the health sector for the training of community brigades in Juprog, San Marcos and Ayash Pichiu. These brigade members were trained in risk identification, risk management, and first aid, and were certified by the Ancash Regional Health Directorate as the first line of response in their localities.

Reactive Actions

We provided direct support in high-Andean areas affected by flooding, landslides and mudslides. Operational machinery was supplied for the immediate response to emergencies and the rapid restoration of damaged roads, thereby facilitating access and connectivity in critical moments.

At the same time, we delivered humanitarian aid to people affected by natural disasters and strengthened the immediate response capacity of the health sector. In response to the dengue health emergency, we donated 30 thermonebulizers for fumigation and vector control in the most affected areas.

Citizen security

In October 2024, we signed an agreement with the Ministry of the Interior to contribute to improving citizen security at the AOI. As part of this agreement, we financed the acquisition of 57 patrol vehicles and 64 motorcycles, which were distributed to 13 local police stations. The first delivery took place in early 2025 in Huarmey and San Marcos.

The fully equipped Toyota Hilux vehicles will strengthen the operational capacity of the Peruvian National Police in areas with high crime rates, addressing a central concern of the community.

LOCAL EMPLOYMENT
GRI 14.9.6

We reaffirm our commitment to the communities in our Area of Direct Influence (ADI) by promoting their development through employment opportunities. We define local employees as individuals born in or officially recognized by the authorities as residents of the districts of San Marcos, Huachis, San Pedro de Chaná, and Huarmey.

In 2024, we strengthened this initiative by boosting local employability through job openings for our operations and those of our Strategic Partners (SPs). To achieve this, we implemented a specific local employment management

procedure with our SPs. Key actions included issuing local calls for job openings and professional internships, which we managed through formal communications with local ADI authorities. In addition, we built a specialized database of local talent, allowing us to more accurately identify available candidates by their origin, educational level, and work experience.

As a result of these efforts, in 2024, we hired 717 local employees for our direct operations, accounting for 19.7% of our total workforce. Additionally, our SPs hired an additional 411 local employees for indirect services. These results reflect our commitment to generating sustainable opportunities in our local communities.

Number of Local Employees 2024 (GRI 14.9.6)
GRI 14.9.6

	Total	Men	Women
Direct employees	717	613	104
Contracted employees	411	261	150

Key management milestones 2024

- We saw a 26% increase (between June and December) in local, unskilled labor among our Strategic Partners (SPs), sourced from our Area of Direct Influence (ADI).
- We trained 41 of our SPs on the local employment procedure. This included a monthly review of KPIs and hiring processes.
- Seven internship positions in AID managed with the participation of five Strategic Social Partners (SSEE), who also carried out social activities within the framework of their Social Responsibility Plans.
- Implementation of pilot dual training programs in areas such as electricity, plumbing, masonry, and maintenance, aimed at potential AID candidates.

LOCAL SUPPLIERS

- In line with our commitment to Ancash's development, we work with local suppliers across various essential activities, such as transportation, lodging, food services, laundry, minor civil works, agricultural and veterinary supplies, as well as cleaning and road maintenance services.

- In 2024, we worked with a total of 1,101 suppliers, of which 884 were national and 85 were based in the Ancash region, representing 7.7% of the total. This reflects our ongoing efforts to integrate local actors into our value chain and contribute actively to the sustainable development of Ancash. We consider as local suppliers all companies with tax domicile in the region, with a special category for those located within our direct area of influence. These relationships stimulate economic activity, generate local employment and strengthen regional value chains.

	2024
Total number of suppliers	1101
Total number of national suppliers	884
Total number of suppliers in Ancash region	85
Percentage of suppliers in Ancash region	85

Sustainability – The Path to Development –

05

A

<

>

DRIVING TOURISM DEVELOPMENT

We have embraced tourism as a strategic line within our social engagement efforts, recognizing its potential to diversify the local economy, generate income opportunities, enhance cultural heritage and strengthen community identity. To this end, we foster participatory processes coordinated with local governments, community actors and technical institutions, always aligned with regional tourism development plans and with a long-term vision. In recent years, we have witnessed a steady recovery of tourism in the Ancash region.

Comandante FAP Germán Arias Graziani Airport

On July 1, 2024, commercial flights resumed at the Comandante FAP Germán Arias Graziani Airport, located in Anta (Carhuaz). This milestone represents a key step in the reactivation of tourism activity in Ancash, a region with remarkable archaeological, cultural and scenic potential.

This reopening was made possible through a coordinated planning effort involving the Central Government, the Regional Government of Ancash, the airline Latam, the Peruvian Foreign Trade Society (Comex), and Antamina. The operation is managed by Aeropuertos del Perú (AdP), the concessionaire of the terminal.

For our part, we made a significant donation that enabled the expansion of the airport facilities, thereby improving the passenger experience.

This initiative is part of the regional competitiveness plan that we have been promoting, which recognizes tourism as a driver of sustainable growth and quality employment in multiple sectors, including hotels, restaurants, travel agencies and related services. According to AdP data, between July and December 2024, more than 35,500 passengers traveled the Lima-Anta-Lima route.

Chavín de Huántar Archaeological Research and Conservation Program

One of our most representative initiatives, which we have supported for over a decade, is the Chavín de Huántar Archaeological Research and Conservation Program. In 2024, we continued to strengthen this partnership as part of our strategy to promote sustainable tourism through the preservation and enhancement of cultural heritage. The program's main objective is to deepen knowledge of new ceremonial spaces identified in previous research seasons.

This program demonstrates how we integrate scientific knowledge with sustainable tourism development, generating educational, economic and cultural value for the surrounding communities and for the entire region of Ancash.

Comprehensive Tourism Plan (PIT)

In parallel, we moved forward with the implementation of the Comprehensive Tourism Plan (Plan Integral de Turismo, PIT) through four key initiatives across each of our Territorial Management Units (UGTs).

1. The development of “quick wins” for tourists.
2. A proposal to enhance the “Qhapaq Ñan.”
3. The systematization of the tourism development process in Huarmey.
4. The commissioning of a technical consultancy for the inventory, promotion and publication of the Fortaleza Valley's tourism resources.

We also carried out a detailed diagnostic of the Qhapaq Ñan in the area, identifying segments kilometer by kilometer and seven communities connected to the ancient Inca Trail. This work consolidates a sustainable tourism product linked to the region's cultural and natural heritage. The technical report will serve as a foundation for sustainable interventions integrated with the region's cultural and natural assets.

4.4

Commitment to Human Rights

GRI 2-27

→ We are committed to respecting and promoting Human Rights (HR) in all our activities and throughout the value chain, acting to identify, prevent, and mitigate any real or potential negative impacts on people and the environment. Our management approach is guided by our Human Rights Policy, which establishes our institutional commitments and principles. This policy is complemented by our Human Rights Prevention and Respect Standard, which defines a framework for action focused on 11 fundamental rights:

- 1. Right to life and personal integrity
- 2. Right to work, decent labor conditions, prohibition of slavery, and social security
- 3. Right to access justice and due process

- 4. Right to equality and non-discrimination
- 5. Freedom of thought, conscience, and religion
- 6. Right to political and citizen participation
- 7. Freedom of opinion, expression, and access to information
- 8. Right to privacy and intimacy
- 9. Right to a healthy environment
- 10. Right to property
- 11. Right to education

Our Human Rights Due Diligence framework covers five lines of action:

1. Commitment and Governance

Management instruments (policies, standards, and procedures) aligned with demanding international standards.

2. Risk Management

Identification, assessment, and management of human rights impact risks through Antamina's Integrated Risk Management System (SIGRA).

3. Training and Communication

Training for employees and Strategic Partners (SSEE), along with internal and external dissemination of our commitments.

4. Grievance Mechanisms

Formal procedures to address complaints, conduct investigations, and implement corrective actions, when applicable.

5. Supervision and Reporting

Supervision led by the Human Rights Officer and accountability through our Sustainability Report.

In addition, our Indigenous Peoples Policy reflects our commitment to recognizing, valuing, and respecting the identity, rights, and aspirations of Indigenous peoples. Under this approach, we seek to build and maintain relationships of trust, fostering intercultural dialogue processes and working toward obtaining Free, Prior, and Informed Consent (FPIC) for new projects or substantial modifications.

KEY ACHIEVEMENTS IN 2024

- In 2024, Antamina was recognized by the Wharton School of the University of Pennsylvania for its transparency and human rights communication practices, standing out as one of the Peruvian companies with the highest rating on the Zicklin Bright Index.
- Human Rights due diligence was updated, with a focus on identifying and assessing human rights risks across Antamina's operations and those of its strategic partners within the direct social influence area.
- Training programs were developed for Antamina employees and Strategic Partners on human rights and related topics, including workplace sexual harassment prevention, psychologically safe environments, the Voluntary Principles on Security and Human Rights, among others.
- Approval of specific procedures aligned with ICMC principles, framing our engagement with Indigenous Peoples: (i) Land Acquisition Procedure, (ii) Resettlement Procedure, and (iii) Procedure for Obtaining FPIC.

Environmental Management

A

<

🏠

>

CHAPTER 05

Environmental Management

Our environmental management systems provide a high-level framework for identifying and effectively managing environmental aspects and their potential impacts. This approach enables us to foster continuous improvement in environmental performance, not only in our direct operations but also in the activities carried out by our strategic partners (SSEE).

5.1

Environmental Management System

GRI 2-27

→ In 2024, we developed virtual training sessions for our staff, covering specific topics on environmental controls and emissions management. This initiative reached 2,500 participants, strengthening internal knowledge on climate adaptation and mitigation.

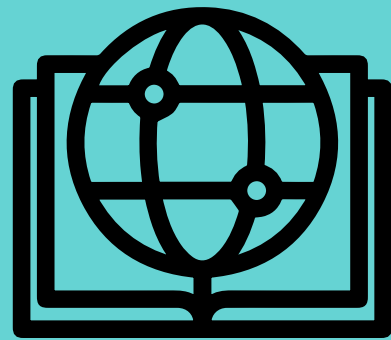

Proactive Environmental Management Index (IGP)

During this period, we introduced the Proactive Management Index (Índice de Gestión Práctica, IGP), a key indicator designed to measure environmental performance for both Antamina and its strategic partners. This index takes a comprehensive approach that combines multiple dimensions of environmental management, including field performance, training hours in environmental management, monitoring of corrective actions, and the implementation of Operational Environmental Management Plans (OEMP).

This outcome reflects our commitment to proactive environmental management, focused on continuous improvement and the prevention of impacts across our operations and value chain.

- > **IGP del 84%**
- > Field environmental performance: 96%

- > **Over 2,400 man-hours** of training

- > **More than 1,300** elaborated OEMPs developed
- > Resolution of more than 300 corrective actions

ENVIRONMENTAL LICENSES

On February 15, 2024, the National Environmental Certification Service for Sustainable Investments (SENACE) approved the Modification of the Environmental Impact Assessment (MEIA 1), supported by favorable technical opinions issued by the National Water Authority (ANA) and the National Service of Protected Natural Areas (SERNANP).

This regulatory milestone marks a key step for the continuity of our operations, as it enables the extension of the mine's lifespan until 2036, under a comprehensive approach that integrates environmental, social and operational sustainability.

MEIA 1 includes the optimization of existing mining components within the current operating area. Key modifications include the expansion of the open pit, improvements to waste dumps and the tailings dam, all aimed at enhancing operational efficiency, minimizing environmental impacts, and maximizing social and economic benefits.

In December 2024, we submitted to SENACE the first Technical Supporting Report (ITS 1) linked to the MEIA, whose main purpose is to improve the efficiency of mining production processes and optimize key auxiliary components.

One of the most significant innovations included in this ITS is the implementation of the co-disposal of dewatered tailings with waste rock, a technology that significantly reduces the environmental footprint through a more efficient management of mining waste. Additional improvements are also planned for auxiliary facilities at the mine, at Puerto Punta Lobitos, and in power transmission lines, strengthening the long-term sustainability and resilience of our operations.

ENVIRONMENTAL MONITORING

GRI 413-1

We have a robust environmental monitoring program that covers a wide range of parameters, enabling us to manage and assess our performance in accordance with applicable regulations, established commitments, and voluntary studies and initiatives that reinforce the effectiveness of our operational controls. We have implemented the "mobile stations" strategy (deployment of mobile equipment on scheduled monitoring days) as part of the regulatory monitoring plan, while working on the installation of fixed facilities for future monitoring.

Additionally, in 2024, we achieved 100% compliance with applicable standards across

the different matrices used for environmental performance evaluation. This achievement was further reflected in the active participation of Environmental Committees in participatory monitoring activities carried out within our direct area of influence. Regarding monitoring points closest to our operation, we worked collaboratively across different areas to implement greater efficiencies and controls to maintain a high level of environmental performance. One example is the implementation of the noise management model, which considers mining planning aspects and allows us to simulate different scenarios, including the design of mitigation measures.

Based on monitoring findings, we develop action plans when necessary and continuously evaluate their implementation under a preventive approach. All our operations have control measures in place to minimize the likelihood of environmental incidents and mitigate potential impacts should they occur.

5.2

Climate Change Adaptation

GRI 3-3, GRI 201-2, GRI 302-1, GRI 302-2, GRI 305-1, GRI 305-2, GRI 305-3, GRI 305-5

→ EMISSIONS MANAGEMENT

As part of our climate strategy, we are actively working to reduce greenhouse gas (GHG) emissions. Our goal is to mitigate the effects of climate change through more efficient, cleaner and more resilient operations. We have set emission reduction targets for 2030 and 2050, aligned with our shareholders' climate commitments. These goals are continuously evaluated through the identification of energy and emissions risks during project planning, and through the progressive diversification of our energy matrix toward lower-carbon-intensity sources.

In 2024, we established a new baseline year for our emissions, driven by the expansion of the haul truck fleet, new infrastructure construction, and the need to incorporate additional Scope 3 categories related

to suppliers and customers. This update aims to optimize internal processes and contribute to reducing our carbon footprint.

By 2033:
100% reduction
of GHG emissions in
Scope 2

By 2050:
Carbon neutral
in Scopes 1 and 2

Greenhouse Gas Emissions
(GRI 305-1, GRI 305-2, GRI 305-3)

Expressed in tnCO ₂ eq	2022	2023	2024
SCOPE 1	628,979	614,212	730,678
SCOPE 2	146,428	113,018	178,990
SCOPE 3	457,677	475,103	409,661
Indirect emissions from products used by the company	239,840	238,956	186,571
Emisiones indirectas causadas por productos que usa la empresa	217,837	236,147	223,090
Indirect emissions from other sources	0	0	0
TOTAL	1,233,084	1,202,333	1,319,329

Carbon Capture – PPL Forest Plantation

As part of our mitigation actions, we maintain a 156-hectare forest plantation at Puerto Punta Lobitos (PPL), which has been in place 25 years and is managed by a specialized contractor. In 2024, we updated the carbon capture report for this area, estimating a reduction of 330 tCO₂e.

CLIMATE RISK IDENTIFICATION

We have incorporated climate-related risks into our risk and opportunities matrix, considering potential physical, regulatory, social, and market impacts. This identification process gives us the opportunity to anticipate critical scenarios and establish appropriate response measures. Key risks identified include:

Risks

Regulatory and legal risks: inclusion of new requirements for emissions reporting, transparency, and climate compliance.

Stakeholder risks: growing expectations from shareholders, authorities, and society regarding our climate action.

Market risks: rising input costs, price volatility and scarcity of natural resources such as water.

Technological risks: need for investment in low-carbon technologies and risks associated with their late or limited adoption.

Reputational risks: potential impacts to our image due to insufficient or late actions on climate challenges.

Physical risks: damage to infrastructure, operational disruptions and increased maintenance costs due to extreme weather events.

Opportunities

Transition to renewable energy: we have a decarbonization roadmap to reduce our carbon footprint.

Infrastructure improvement: we design works with the capacity to withstand extreme hydrological events, incorporating the Environmental Infrastructure Management System (SIGIA).

Refrigerant replacement: we adopt more sustainable alternatives in line with the Montreal Protocol.

Electromobility: we are advancing in the progressive incorporation of electric vehicles, including their integration into contracts into third-party contracts.

ENERGY EFFICIENCY

GRI 302-1

Our energy consumption is concentrated exclusively on internal use for mining operations. We do not record energy consumption outside the organization. This energy use includes fuels and electricity required during different stages of the operational process.

We are committed to improving the energy efficiency of our operations by prioritizing low-consumption equipment and optimized processes to reduce energy intensity per ton of concentrate produced.

Energy Consumption

(GRI 302-1)

Expressed in joules or multiples	2022	2023	2024

5.3

Water Resource management

GRI 2-27, GRI 3-3, GRI 303-1, GRI 303-2, GRI 303-5

→ Water is a vital resource for life, economic development and environmental balance. For this reason, we are committed to responsible, efficient, and sustainable water management by implementing measures that ensure its availability and quality without generating negative impacts on communities or the natural environment.

Our management is backed by the following certifications:

- Water discharge quality – Maximum Permissible Limits, DS 010-2010-MINAM.
- Water quality in receiving bodies – Environmental Quality Standards for Water, DS-004-2017-MINAM.
- Water Footprint ISO 14064.

- Blue Certificate – National Water Authority (ANA) – Ministry of Agriculture (MINAGRI).

We are committed to the continuous improvement of our water management practices, recognizing its variability in time and space, as well as its vulnerability to climate change. To this end, we have adopted key principles that guide our actions:

- Maintain high standards in water management across our operations.
- Implement a risk identification and management system to minimize impacts.
- Apply an integrated water balance for efficient operations.

- Ensure strong internal governance to promote sustainable water management.

- Promote adaptation measures in response to water variability scenarios.

- Report periodically about our management to our stakeholders.

- Actively participate in watershed management in coordination with authorities.

Our operations hold two water use licenses granted by the National Water Authority (ANA), which authorize us to use surface and groundwater.

In the mining area, located in Huari province, we operate in a low water-stress environment, with an average annual

Intro

01

02

03

04

05

Environmental Management

A

<

>

rainfall of 1,200 mm. By contrast, Puerto Punta Lobitos in Huarmey is in a water-stressed region, with less than 10 mm of annual rainfall. Through the mineral pipeline, we transfer water from the high Andes to the coast, which favors the reuse of water in processes such as filtration, storage, concentrate transport and forest irrigation.

We secure fresh water year-round through an artificial dam that captures rainwater during the rainy season, ensuring that we do not compete with other users for this resource.

The application of predictive models of water quality and quantity allows us to anticipate operational scenarios and make timely decisions to prevent risks. Since June 2023, we have operated under a water management standard that defines governance, guidelines, indicators, and responsibilities, ensuring compliance with our environmental obligations and the adoption of best practices in the sector.

In compliance with our annual goals and environmental commitments, during 2024 we achieved the following results:

- 100% compliance with Maximum Permissible Limits (MPL) for discharges.
- 100% compliance with volumes authorized by ANA.
- 100% compliance with Environmental Quality Standards (EQS) in receiving bodies.

- 100% compliance with authorized water use volumes at Yanacancha.
- 100% compliance with water reuse volumes at Puerto Punta Lobitos.
- 97% water reuse across our operations.

As part of MEIA 2024, we implemented new measures to strengthen our water management:

- Reinforced compliance with EQS for water in receiving bodies.
- Implementation of a new Water Quality Monitoring Plan.
- Modifications to discharge permits related to the relocation of certain existing points.

We also promoted several monitoring, innovation and participation initiatives:

- Six participatory monitoring activities conducted within our direct area of influence.
- Two semi-annual workshops held to share water performance results with local and regional authorities.
- Development of a drone-based water monitoring system, reaching the Minimum Viable Product (MVP) stage, with progress presented at the PERUMIN Innovation Hub.

Our commitment to participation is also reflected in our direct relationship with the 62 Water User Committees (Comités de Usuarios de Agua, CUAs) of the San Marcos district, coordinated through our specialized territorial management unit:

- We trained CUA representatives and strengthened their ties with state entities such as ALA Huari, MINAGRI and AGRORURAL.
- We supported the update of the organizational system, including the drafting of bylaws, awareness of the General Water Law and Water Resources Management, etc.
- We facilitated the granting of water use licenses for 40 CUAs, enabling them to access financing for infrastructure.
- We donated materials and supplies (cement, pipes, valves, aggregates) to improve community water infrastructure.

Through the Operational Environmental Management Plan (OEMP), we identify and describe potential impacts that activities may have on water resources, assess their significance, and establish controls to prevent incidents and environmental impacts. Finally, we calculate our water stress footprint in line with the international standard ISO 14064. Certification is performed by an external entity, thus ensuring the transparency and credibility of our management practices.

Water Consumption
GRI 303-5

		2022	2023	2024
Total consumption	All water lost to evaporation, retention (in the product or in waste), or other losses, and not returned to surface water, groundwater, marine environments or third parties.	12,403.93	17,669.75	15,163.32
Reuse or recycling of operational water	Water used in an operational task that is recovered and reused in an operational task, either without treatment (reuse) or with treatment (recycling).	84,137.26	82,712.22	79,501.98
Water use	Volume of water used in operational tasks.	103,990.47	103,344.01	98,145.17

5.4

Waste Management

GRI 2-27, GRI 3-3, GRI 2-25, GRI 306-1, GRI 306-2, GRI 306-3

→ We promote the responsible use of material resources through reuse, recycling, and recovery, incorporating the principle of minimization at every stage of our processes. This vision allows us to reduce the environmental impact associated with waste generation and to advance toward management practices grounded in efficiency, innovation and the circular economy.

We minimize our environmental impact through the proper management of waste, preventing contamination of soil, water and landscapes. To achieve this, we implement treatment, recycling and responsible disposal processes that protect natural resources and ensure the quality of the environment in our surrounding communities.

We operate under a Integrated Waste Management System, which defines general guidelines for the treatment of both solid and liquid waste generated in our operations. The participation of our employees and strategic partners is essential to complying with these guidelines, as waste management is a day-to-day activity that requires constant commitment.

General Waste
(GRI 306-3)

	2022		2023		2024	
Expressed in metric tons (1,000 kilograms = 1 metric ton)	Non-hazardous waste generated	Hazardous waste generated	Non-hazardous waste generated	Hazardous waste generated	Non-hazardous waste generated	Hazardous waste generated
A) Total waste generated	14,725.00	2,936.67	24,467.91	3,098.57	24,893.98	3,775.39
B) Total waste sold, recycled, reused	7,886.44	2,077.19	12,482.63	2,234.18	14,695.78	2,536.94
(A-B) TOTAL WASTE DISPOSED	6,838.56		11,979.28		10,198.2	

CIRCULAR ECONOMY

Our circular economy strategy is applied from the design and operational planning phase, prioritizing material efficiency and integrating sustainability criteria into decision-making. Waste is considered a resource with potential to be recovered and reintegrated into productive chains.

1. Minimization and reduction at the source.
2. Optimization of material use to maximize efficiency.
3. Reintegration of materials into new productive chains through various recovery strategies.
 - Only when reuse or recovery is not feasible do we resort to responsible disposal, in strict compliance with current environmental legislation.

In 2024, we achieved a 60% recovery rate of total waste generated. This outcome was attained despite a challenging context marked

by changes in the management of recoverable metallic materials from large-scale equipment, which are currently stored pending commercialization opportunities. In the case of end-of-life tires (ELT), while they remain in temporary storage, 63% were reused in operational activities. We also fostered external recovery through partnerships such as the one established with Aniquem, channeling revenues from the formal sale of cardboard, paper, plastic, and aluminum caps into social initiatives.

On the other hand, we promoted the inclusion of circularity criteria as value-added elements in bidding processes and in the environmental performance of our strategic partners. Contracts were awarded to Seché and Resiter to cover the Yanacancha and PPL-External Route areas, respectively. In this context, the Transport Committee received 78 environmental initiatives focused on waste management and the circular economy. These efforts were complemented by awareness campaigns on the correct segregation and handling of solid waste (DC-022), which totaled 612 hours of internal training.

HAZARDOUS WASTE MANAGEMENT

Among the waste generated, hazardous waste (RESPEL) poses the greatest potential for significant impact. The most relevant include:

- Used oil, from machinery maintenance. In 2024, around 23% was reused in blasting activities, while the remainder was sold through authorized waste operating companies (EORS).
- Oil-contaminated rags, generated during maintenance work. This year we implemented a washing process that allows their reuse in operations.

Both types of waste are generated by our direct activities and those of our strategic partners. Their management is carried out through EORS companies authorized by the Ministry of the Environment (MINAM), under strict operational and safety controls. To reduce the impacts associated with transport and disposal, we prioritize internal recovery and work to reduce its hazardousness. To verify this management, we conduct audits, performance evaluations and compliance checks against key service indicators.

5.5

Biodiversity

GRI 3-3, GRI 2-25, GRI 2-27, GRI 101-1, GRI 101-2

→ Our commitment is reflected in the implementation of concrete actions aimed at the conservation of ecosystems throughout all phases of the mine life cycle, from exploration to post-closure. In this way, we are systematically moving toward the goal of achieving zero net loss of biodiversity. We are guided by the Biodiversity Standard DC-032, which establishes key guidelines for the protection and conservation of biological diversity within our AOI and we apply it to all our activities, including those of our SSEEs, ensuring that our teams clearly understand their responsibilities through training sessions, environmental talks and educational materials.

To ensure compliance, we implement monitoring and verification mechanisms. We have also developed a robust environmental database supported by

systematic biological monitoring, and we regularly review our environmental performance, adjusting our plans as needed in response to changes in the environment or in the project itself.

We apply the mitigation hierarchy: avoid, minimize, rehabilitate and offset impacts, in line with the MINAM guidelines. We have also adopted the International Council on Mining & Metals (ICMM) guidelines and IFC-World Bank Performance Standard No. 6 for the implementation of Biodiversity Action Plans (BAPs), one of the most rigorous global standards in biodiversity management.

In 2024, we executed 16 actions: seven were partially completed and one action remains pending.

As part of our management, we developed and implemented the following programs:

Program	Objective	2024 Results:
Monitoring of terrestrial and aquatic fauna	Periodically evaluate the presence, abundance and diversity of species in direct and indirect areas influence. Indicators are approved by SERFOR and other competent authorities.	Reports were produced for both seasons.
Wildlife rescue and relocation	Carry out actions for deterrence, rescue, handling, transfer and release of sensitive species (amphibians, reptiles, birds and mammals).	Three operational areas were assessed to identify the presence of these species and implement appropriate measures.
Participatory Environmental Monitoring	Monitor fauna and flora, soils and vegetation, as well as rescue and relocation of sensitive species. These actions build a robust environmental database validated by competent authorities. The goal is to maintain these practices throughout the life of operations.	Terrestrial and hydrobiological monitoring was conducted in wet and dry seasons at both Yanacancha Mine and Puerto Punta Lobitos.

ENVIRONMENTAL COMPENSATION PLAN (ECP)

As part of the 2024 Environmental Impact Assessment Modification (MEIA 2024), we developed an Environmental Compensation Plan(ECP)toaddressresidualimpacts onfragile ecosystems, particularly wetlands (bofedales). This plan responds to impacts that cannot be avoided, minimized or rehabilitated, and is part of our most recent Environmental Management Instrument (EMI).

The ECP's main objective is to achieve no net loss of biodiversity and ecosystem functionality by executing concrete, measurable and time-bound actions. These actions are carried out in an ecologically equivalent wetland located within Huascarán National Park (PNH), ensuring both ecological relevance and technical feasibility.

To guarantee effective and coordinated implementation, we signed a Framework Agreement for Interinstitutional Cooperation with the National Service of Natural Protected Areas (SERNANP). This agreement facilitates direct coordination of conservation initiatives within the protected area and strengthens our capacity to implement solutions aligned with national regulations and international best practices.

The adopted strategies are technically rigorous, monitorable and verifiable over time, ensuring objective and transparent evaluation of their effectiveness.

COMMITMENTS TO 2030

In line with global environmental standards, we have adopted the following biodiversity commitments:

- **Goal 1 (2030):** Halt ecosystem loss through annual biological monitoring and periodic biodiversity management reviews.
- **Goal 2 (2030):** Restore degraded ecosystems. The ECP under MEIA 2024 includes the compensation of 15.44 hectares of wetlands.
- **Goal 3 (2050):** Maintain, restore and strengthen the resilience of natural ecosystems.

5.6

Air quality

→ We recognize the importance of preserving air quality as a key element for people’s well-being and environmental balance within our area of influence. For this reason, we permanently manage and control particulate matter generated by our operations, using a preventive and evidence-based approach.

We operate a continuous air quality monitoring system focused on particulate emissions, enabling us to detect deviations in a timely manner and define specific control and mitigation measures. This information is essential to strengthening our improvement plans and progressively reducing the environmental impact of our operations.

5.7

Tailings Management

GRI 3-3, GRI 2-25, GRI 2-27

→ The safe and environmentally responsible management of tailings has been a priority since the beginning of our operations. We assume this responsibility as a fundamental obligation to our workforce, communities, and surroundings.

Our management is guided by the following principles:

- Align tailings management with our Human Rights Policy, ensuring respect for local communities involved, promoting their sustainable development and addressing grievances in a timely manner.
- Establish clear policies, systems and responsibilities that support the safety and integrity of our facilities. We implement assurance programs and periodic reviews, reporting results rigorously to the General Management and our shareholders. In February 2024, we approved and published a new Tailings Management Policy, formalizing commitments and responsibilities in this area.
- Design, operate, and close our tailings facilities to guarantee long-term safety and stability, applying a multi-layered defense approach to prevent critical risks.
- Comply with current Peruvian legislation and adopt, or exceed, recognized international standards and

good practices, such as those set by CDA, ICMM, and GISTM.

- Apply specific governance procedures to ensure compliance with all tailings management requirements, thereby minimizing the risk of catastrophic failures.
- Maintain Emergency Preparedness and Response Plans, which are regularly updated and strengthened. We also collaborate with neighboring communities through relevant government agencies to reinforce their response capacity.

We maintain open and transparent communication on tailings management through institutional channels and mandatory reporting.

Our tailings facility is an active installation composed of a main dam and auxiliary infrastructure, including tailings transport and deposition systems, water recovery systems, and surface water management structures, among others.

The main dam is built with castling and has a lining on the upstream side. Its construction combines centerline and downstream methods, with the downstream method

applied between elevations 4,113 and 4,135 meters above sea level of the crest of the dike.

In 2023, we conducted the most recent risk assessment of the tailing's facility. The study concluded that there is an insignificant probability of credible catastrophic failure events, such as flow failures that could compromise the facility's integrity or cause uncontrolled loss of water and/or tailings downstream. It also determined that the facility has been designed, built, operated and monitored in accordance with the ALARP principle (As Low As Reasonably Practicable), minimizing risks to the lowest reasonably achievable level.

Our tailings management is aligned with the highest national and international standards, reinforcing our commitment to safety and sustainability. Specifically:

- The design of the tailings dam follows the guidelines of the Canadian Dam Association (CDA).
- Comprehensive tailings management is aligned with the Global Industry Standard on Tailings Management (GISTM), developed by ICMM, UNEP and PRI.

As a company with ICMM-member shareholders, we adhere strictly to ICMM principles. We comply rigorously with current Peruvian regulations on dam safety, environment, and waste management.

DESIGN, MONITORING AND EMERGENCY PREPAREDNESS

The raise of the main dam and auxiliary dikes to elevation 4,195 masl has been designed under the highest international standards (CDA and GISTM), ensuring structural stability against both short- and long-term extreme events. These facilities are engineered to prevent catastrophic failure modes.

We have established Tailings Storage Facility and Water Dam Governance Guidelines, which set out current practices, as well as the roles and responsibilities of all stakeholders across the design, construction, supervision, and operation of the tailings storage facility and associated water management facilities. This document also defines responsibilities during internal reviews and state regulatory inspections, incorporating a RACI Matrix that specifies who is “responsible”, “accountable”, “consulted” or “informed” regarding decisions about tailings facilities. Additionally, we maintain an organizational chart that details the supervision levels across engineering, construction, and operation of the tailings storage facility, where three lines of defense are established to prevent and control any incident that may arise.

Geotechnical monitoring of both the main dam and auxiliary dikes is also in place as a critical measure for preventing and controlling potential emergency situations related to the TSF.

LINES OF DEFENSE

Our risk management is structured around a multi-line defense model with three distinct levels:

- 1. Operational Management:** Real-time data transmission systems are deployed, including piezometers, inclinometers, pressure gauges, and remote sensors to monitor the TSF, abutments, natural slopes, and water levels. In addition, our tailings facility is inspected several times a day by trained operators and technical personnel, all operating under certified manuals for operation, maintenance, and supervision and design prepared by accredited engineering firms.
- 2. Risk Management and Governance:** The Senior Tailings Strategy Management team is responsible for centralized oversight, staffed by professionals with expertise in tailings governance and management. On the other hand, formal annual safety inspections of the TSF are conducted by an independent, external Engineer of Record.
- 3. Internal Audit:** An Independent Tailings Review Board, composed of global subject-matter experts, has provided oversight since the project’s inception. Likewise, an Independent Tailings Dam Safety Review is carried out every three years.

Our Policies and Procedures

Policies, procedures, standards and commitments	Scope	Purpose	Approval Date
Tailings management policy	Antamina personnel and affected communities	Establish the company’s principles and commitments for safe and responsible tailings management, consisting with internal policies, Peruvian legislation and international standards.	Feb-25
Antamina Tailings Storage Facility (TSF) and Water Dam (WD) Standard	Antamina personnel involved in Tailings Management	Ensure facilities are developed in accordance with best practices to prevent unacceptable performance or catastrophic failures.	5/18/2022
Antamina Tailings Storage Facility (TSF) and Water Dam (WD) Governance – Guideline	Antamina personnel involved in Tailings Management	Provide current practice on how Antamina’s CEO and President, the executive team, and applicable shareholder committees govern the main aspects related to tailings and water dam management.	1/19/2022
Commitment to follow the CDA guidelines, and the ICMM and GISTM Principles	Antamina personnel involved in Tailings Management	Comply with international standards and adopt best practices for safe and responsible tailings management.	8/31/2021
Commitment to use an Engineer of Record (EoR) and an Independent Tailings Review Board (ITRB)	Antamina personnel involved in Tailings Management	Guarantee that design, construction, operations, and monitoring are consistent with internationally accepted expectations.	12/1/2012

Our key initiatives

During 2024, we strengthened actions in community engagement, interinstitutional cooperation, and technical knowledge-sharing in tailings management, reaffirming our commitment to safety, innovation, and open dialogue.

- **Guided visits to the TSF:** As part of our Citizen Participation Plan, we organized four guided visits with environmental committees from our direct area of influence. These visits allowed participants to observe the TSF facilities on site, raise questions, and voice concerns in a transparent and technical setting.
- **Geostable Tailings Consortium:** We continued our active participation in this international consortium, which fosters collaboration among mining companies to address technical challenges in tailings and waste rock. In 2024, we shared advances from our research on commingling technology with the other member companies, contributing to the development of geostable solutions that enhance our operation's safety, stability and environmental performance.
- **9th Tailings Congress 2024:** We contributed to this important technical exchange forum by presenting "Antamina Codisposal Project – Testing Program Requirements" and participated in the discussion panel "Trends and innovation in tailings technologies", sharing our insights and vision for the future of responsible tailings management.
- **Presentation to OSINERGMIN officials:** We presented our TSF management system to OSINERGMIN's Mining Control Management,

including the internal implementation process for compliance with the new Occupational Safety and Health in Mining Regulation. This presentation highlighted our comprehensive approach to aligning operations with both regulatory and international standards.

Interinstitutional agreements on risk management

- **Framework agreement with INDECI:** Under the 2020 agreement with the National Institute of Civil Defense (INDECI), we continued joint actions to strengthen the Reactive Disaster Risk Management in Ancash region. The agreement aims to improve preparedness, response, and recovery capacities in emergencies, reducing local communities' vulnerability.

Our 2024 achievements:

- **Monitoring and Control Enhancements:** We completed Phase I of the Tailings Dam Performance Monitoring System (TPMS), modernizing critical instrumentation in the main dam and enabling real-time data access for key personnel and the EoR, who issued six reports in 2024.
- **Alignment with GISTM:** Progress was made in implementing the remaining work to strengthen our compliance with the Global Industry Standard on Tailings Management (GISTM), a project that will continue through 2026.
- **Management model sharing:** We shared our governance and management practices and tailings management with Osinergmin and

the broader national and international mining industry, including research advances on co-disposal of waste rock and tailings as a possible sustainable solution.

- **9th Tailings Congress 2024:** We participated in the 9th Tailings Congress 2024, presenting "Antamina Codisposal Project – Testing Program Requirements" and participating in the panel "Trends and innovation in tailings technologies."
- **Geostable Tailings Consortium:** Information was shared on advances from our research in Commingling technology.
- **Presentation to Osinergmin officials:** Our TSF management system and the implementation of the new Occupational Safety and Health in Mining Regulation were presented to the officials of the Mining Control Management.

In 2024 we also reinforced stakeholder engagement mechanisms related to tailings management:

- **Employees:** Actively participate in TSF risk assessment workshops, proposing control improvements and reviewing technical designs.
- **Shareholders:** Received quarterly updates on tailings management through the Tailings Dam Committee (TDC), whose recommendations are translated into concrete action plans.
- **Communities:** Our Citizen Participation Plan ensures all access to public information, involvement in decision-making, and opportunities to raise concerns about the project.

Environmental committees also conducted guided visits to the facilities, as well as cleared up doubts and concerns, and received semiannual reports on water, air, and soil quality monitoring. Four visits were held in 2024

- **Authorities:** Periodically receive technical, geotechnical, and environmental reports, guaranteeing a high level of regulatory compliance and transparency. In addition, under our framework agreement with the National Institute of Civil Defense (INDECI), we continue to implement joint actions for Reactive Disaster Risk Management, strengthening preparedness, response, and recovery while reducing the vulnerability of the population.

EMERGENCY RESPONSE PLAN

We maintain an Emergency Response Plan designed to address non-catastrophic failures, such as pipeline leaks or seepage collection system malfunctions. These measures are reinforced with awareness campaigns for downstream communities and the implementation of the Community Early Warning System (SAT-COM), which provides timely alerts for potential emergencies related to floods, earthquakes, and other events in the sectors of Ayash Huaripampa, Ayash Huamanín, Ayash Pichiu and Santa Cruz de Pichiu community.

Materiality

We conducted a materiality assessment to identify the priority topics that will guide our sustainability management. These topics were classified according to their relevance for both our organization and our stakeholders.

Our material topics are:

1. Economic impact and closing gaps in public services
2. Health and safety
3. Supply chain
4. Energy, emissions and climate resilience
5. Social management and promotion of human rights
6. Water management
7. Tailings and waste management
8. Innovation, technology and cybersecurity
9. Business ethics, transparency and compliance
10. Attraction, retention and development of human capital

These topics provide a strategic framework for decision-making, strengthening our ESG performance, and ensuring that our operations contribute actively to sustainable development in our areas of influence.

OUR STAKEHOLDERS

At Antamina, we view engagement with our stakeholders as a core commitment to ensuring that all parties benefit from our contribution to sustainable development. As a leading company in the Peruvian mining sector, we promote the well-being of our employees, shareholders, strategic partners, and the communities within our area of influence, guided by a philosophy of responsible management that drives our participation in the country's sustainable growth.

In line with this approach, throughout the year we strengthened transparency, promoted social participation, and created spaces for dialogue and accountability. This allowed our stakeholders to directly understand the benefits of our operations and their positive impact on both the country's and local communities' development.

Our stakeholders are:

1. Shareholders
2. Communities
3. Environment
4. Government
5. Strategic partners
6. Employees
